A

A-50 () • Russia's A-50, none of which were in production before, during, or after the Ukraine war, represented one of the relics of the Soviet ingenuity the collapse of the U.S.S.R. left behind. During the Ukraine war, Russia lost several A-50s. On February 23rd, 2023, the day after the first anniversary of the Ukraine war, Belarusian opposition groups allegedly attacked a Russian A-50 near Minsk at a Belarusian Air Force base called the Machulishchy Air Base. The head of the Belarusian opposition group, BYPOL (i.e., Aliaksandr Azarov), claimed to have executed the attack with drones (i.e., רחפנים). BYPOL is alleged to have been one of the defectors from the Belarusian state security services during the protests that erupted against Alexander Lukashenko in 2020.[1]

Abana () • The Greeks, who first systematized monotheism in the Mediterranean, call the river Abana Chrysorrhoas or "Golden River". One of the few rivers, Naaman, the Syrian leper, mentions (2 Kings 5:12), the modern equivalent is likely the modern Nahr Barada, which has its source in the Antilebanon mountains, approximately 18 miles northwest of Damascus. After flowing through the capital, the river drains into a marshy lake, the Meadow lakes, the Bahret el-Kibliyen, which is approximately 18 miles east.

Rich with flora and fauna, fertile gardens, and orchards, the river abounds with life. Naaman, captain of the army of the King of Aram, claims that the Abana and Pharpar are greater rivers than all the waters of Israel. Naaman raises the question, "Are not Abana and Pharpar, rivers of Damascus, better than all the waters of Israel?" Alternatively named, Amana, the river appears elsewhere. In Song of Songs, the river is described as part of the mountainous district of Lebanon from which the Amana river rises (Cant. iv. 8).

A German Assyriologist, Friedrich Delitzsch[2] (3 September 1850 – 19 December 1922), one of many great Semiticists from the 19th century, published a book, attempting to find the location for paradise. Published under the title, Wo lag das Paradies? claims the word derives from Cuneiform literature as Am-ma-na. (Delitzsch,Wo lag das Paradies? p.103).

ad hominem () • In the vast majority of cases where members of the community express opinions different from those of certain groups, representing hypotheses on the outcomes, solutions, or remedies for Ukraine's ultimate failure on the battlefield, the groups respond ad hominem.[3] The groups attack the person but leave his or her arguments in tact. The most common theme for an attack ad hominem is to claim man is the measure of all things[4] so that by a measure of expertise (however unqualified it may actually be) a man from the group is higher, stronger or smarter than the attacked. In the vast majority of these cases, the measure for height, strength or intelligence is hardly based upon anything one might associate with these concepts, especially in terms of analysis. The vast majority of the assailants can hardly muster a record on predictions commensurate with intelligence.

---

[1] [חוגי אופוזיציה בבלו רוסיה: תקפנו ברחפנים וגרמנו נזק למטוס פיקוד וביון רוסי ברייב □-50 שחנה בבסיס אווירי ליד מינסק, תיק דבקה]

[2] In his famous work, Babel and Bible (1902), Delitzsch claimed all Old Testament mythos derived ultimately from Babylon. In his writing about Goethe's fascination with Abraham's sun-worshipping in the Quran in particular, he wrote: "There is a remarkably beautiful passage in the Koran , VI, 75 et seq ., which so fascinated Goethe that he expressed the desire to see it dramatised. Mahomet has mentally put himself in the place of Abraham, and is endeavoring to realise the manner in which Abraham had reached the monotheistic idea. He says : "And when the gloom of night had fallen, Abraham stepped forth into the darkness ; and behold, there was a star shining above him. Then he cried out in his gladness : ' This is my Lord ! ' But when the star grew dim, he said : ' I love not those that grow dim. ' And when the moon rose radiantly in the firmament, he cried out in exceeding gladness : ' This is my Lord ! ' But when it set, he said :'Alas, I shall surely be one of the people that must needs err. ' But when the sun rose dazzlingly in the morning, he said : ' This is my Lord, this is the greatest of all ! 'But when the sun set, then he said: ' O, my people, verily I am rid of your idolatry of many gods, and I lift up my countenance to him alone that created the heavens and the earth. ' ' (pg. 60) See Fig. 57. THE SUN GOD OF SIPPAR ENTHRONED IN HIS HOLY OF HOLIES. See also (Lenormant, V. , p. 301.)

[3] You can read more about arguments in Aristotle's , 178(b)17 where Aristotle describes the in which 'persons direct their solutions against the man, not

The alleged prohibition on double negatives is a perfect example. An attack on a person's grammar is a great way to deflect attention away from the substance of a meritorious claim, transforming the substance of the counterargument into an ad hominem attack. But, alas, Americans who commit this error demonstrate not only their own personal dedication to a complete disregard of American history but a distinct ignorance for the causes of revolution. Benjamin Franklin, for instance, wrote about the causes of the Revolutionary War with double negatives. In fact, Franklin wrote: ”That is simple. In the Colonies we issue our own money. It is called Colonial Scrip. We issue it in proper proportion to the demands of trade and industry to make the products pass easily from the producers to the consumers. In this manner, creating for ourselves our own paper money, we control its purchasing power, and we have no interest to pay to no one.” [5] Double negatives are but among the many different devices in grammar sophists seize to deflect rather than to defend or attack an idea directly.

A direct consequence of arguments ad hominem is misology. In the (88c-91c), Socrates warns his listeners, discouraged by the objections of Simmias and Cebes, against becoming haters of , for people who hate become condemned. According to Plato, 'misologists' are not presented as a type of proto-skeptic on whom Socrates showers covert sympathy. In his admonishment against misanthropy, Socrates emphasizes what consequences ensue from misology. Misology results in a lost connection with the splendor an understanding of the world imparts to a fellow interlocutor in the dialogue on ; in a way similar to those whose sins earn him or her permanance in one or more of Dante's rings of hell, a misologist condemns himselr or herself eternally to a life of falsehood where the only reality he or she may witness or be witness to are the shadows the enslaving cavedwellers cast from fire onto the wall of the inescapable cave. (c.f., Republic (514a-520a, Book VII)). Misology is therefore a consequence far worse than the fleeting discomfort egoists (who want ”to win” debates must endure from refutation, for in a refutation of a meritoriously decided argument an egoist, ipso facto, exceeds the misologist through his or her acknowledgement, whereas a misologist only confirms his or her earlier condemnation of reason (with all of its concomittant consequences) in the application of an argument ad hominem. It is therefore far better for a reasonable egoists to feel fleeting discomfort than for a misologist to enjoy his or her false sense of victory.

---

against his arguments.'

[4] Protagoras, the pre-Socratic Greek philosopher (c.490–c.420 BC) espoused the view. He stated: ” , , .”

[5] It would seem that Colonial Scrip is a far better store of value for colonial goods than the imposition of English monies in the form of silver or gold coins minted at the Royal Mint following the Crown's passage of the Currency Act in 1764. Who could ever imagine currency to have been at the heart of the colonial uprising? Given the U.S. no longer issues its own currency, Colonial Scrip demonstrates now how far the U.S. has come in monetary policy from its post-revolutionary achievements.

ADHD () • ADHD or Attention Deficit Hyperactive Disorder, is one of the many different pseudo neuroses broke, bankrupt, bribe-hungry psychologists, who are a proponent of Fromm's love on Monday, Freud's egotistical aspiration for sex on Tuesday, or Jung's shadow chasing on Wednesday, concocted to ensure American pharmaceutical companies, who are making hundreds of millions from even more enhanced synthetic forms of 20th century drugs such as Xanax[6], could earn a tremendous amount from the creation of a new generation of drug addicts, who might be capable of superseding their parents' generation of Methamphetamine addicts, whose lives the modern American police state bureaucracy have exploited for an untold number of Court cases, imprisonments, or ruined lives from the 1970s to the present.

Advanced Nuclear Fuels GmbH () • On July 22nd, 2026, the Lower Saxony Ministry of the Environment (German: Niedersächsisches Ministerium für Umwelt, Energie und Klimaschutz) granted approval to Advanced Nuclear Fuels GmbH (ANF), a subsidiary of the French Framatome consortium, to expand its nuclear fuel production plant in Lingen, Germany. According to a report Die Zeit[7] published on July 22nd, 2026, the facility will begin manufacturing hexagonal fuel elements for Russian-type VVER nuclear reactors using technology from TVEL (Russian: ТВЭЛ:Тепловыделяющий элемент), a subsidiary of the Russian state corporation Rosatom.[8]

After the meltdown Japan witnessed at Fukushima, Angela Merkel had drawn up plans to shut down nuclear power plants in Germany by December 31st, 2022. Chancellor, Olaf Scholz, a sock puppet for NATO during the Biden administration, decreed in October 2022 that all three of the country's remaining nuclear power plants, such as ANF would only continue operating until mid-April 2023. France, whose nuclear power industry is heavily integrated into Germany's, considered ambitious plans to build new reactors at that time. The shift is related to the severe shock in the demand for oil President Donald J Trump's illegal war of aggression against Iran continued to caused throughout the Fourth Anniversary of the Ukraine war.

The Alien Terrorist Removal Court () • Alien Terrorist Removal Court of the United States of America is an example in the expansion of America's police State bureaucracy. The police State bureaucracy creates redundant or duplicative Courts, police, or law to fortify existing police State powers by an order of magnitude equivalent to the redundancy or duplication. Since Article III already contains a sufficient number of Federal courts, whose administration of justice covers Federal criminal statutes, none of its functions are original.

---

[6] America's popular culture has missed no opportunity to promote Xanax. In a feature for Travis Scott's song, Sicko Mode, Drake glorifies the drug when he compares himself to a light in a cliché, saying ”I did half a Xan, thirteen hours 'til I land Had me out like a light.”

[7] [”Was hinter der umstrittenen Atomkooperation in Lingen steckt,” Die Zeit], [”Niedersachsen genehmigt Fertigung russischer Brennelemente in Lingen,” Die Zeit], [”Zeit: ,” Zeit: в ФРГ начнут производить ядерное топливо российского типа. 22 июля. 2026.]. 22. Juli 2026]. 22. Juli. 2026.], [”Власти ФРГ одобрили проект по производству ядерного топлива с «Росатомом»,” Известия. 22 июля 2026,]

[8] It is important to emphasize just how significant these developments are for nuclear power. ANF's decision to embrace the production of Soviet nuclear fuel represents a significant event for Germany, Europe, and the West, as the Financial Times hailed a new era in nuclear energy with microreactors. (See [”The next big thing in nuclear will be very small,” November 29th, 2022]). In the UK, FTSE 100 group Rolls-Royce, a British company with a long history of innovation, is leading a private consortium to build a fleet of mini reactors, each capable of generating 470MW of electricity. The UK government awarded Rolls-Royce 200 million pounds for the project. (See [”Air Force selects three microreactor developers for ANPI,” Department of the Air Force. April 23rd, 2026])

It is essentially a money laundering scheme. A judge is impaneled. Court personnel are hired. Lawyers are appointed. Victims are selected. The pre-determined process has absolutely nothing to do with due process (not merely for lack of jurisdiction) but for the simple fact that no Court in America, let alone those falling inside or outside of the US Constitution observes the Fifth Amendment and Fourteenth Amendment requirements for due process. It is designed to line pockets for members of the police State bureaucracy. The law authorized the chief justice of the United States to designate five U.S. district court judges to "review applications for the removal from the United States of alien terrorists," according to the FJC, the research and education agency of the judicial branch of the U.S. government. Since April 24, 1996 to July 15th, 2026 (i.e., the thirtieth anniversary of the ATRC), the five appointed justices did nothing but earn taxpayer money. It would a understatement to emphasize how prodigious the ATRC during its past thirty years has truly been.

The US Constitution does not allow for Article III to establish Courts outside of its jurisdiction; no Courts other than those expressly authorized under Article III of the US Constitution may be impaneled; the "Alien Terrorist Removal Court" is therefore a violation of Article III. Accordingly, no judgement ever rendered from one or more of its benches has jurisdiction over any individual in the United States of America.

The ATRC operates on the basis of a criminal statute. The Antiterrorism and Effective Death Penalty Act of 1996 (AEDPA), whose enactment on April 24, 1996 legislated new Federal crimes such as providing material support to designated foreign terrorist organizations[9] under 18 U.S.C. 2339B or committing acts of terrorism transcending national boundaries under 18 U.S.C. § 2332b[10], is a criminal statute. Since the controlling statute for the ATRC's jurisdiction is a criminal statute, the Sixth Amendment[11] applies to require its trials to be public. The Sixth Amendment states: "In all criminal prosecutions, the accused shall enjoy the right to a public trial." Since the ATRC does not allow for public trials, the Court is ultra-vires, operating in the complete absence of any jurisdiction whatsoever. A recent example is informative. In case numbered 2026-trc-1 (JNE), the United States filed its first order in 30 years on July 15th, 2026. It filed an "Application to the United State Alien Terrorist Removal Court pursuant 8 U.S.C. section 1531, et seq. to remove an unnamed respondent. The unnamed respondent is a violation of the Sixth Amendment, since his or her name is not made public. The fact that a judge issues an opinion from his or her bench without a public trial further undermines any argument the Federal government may advance for jurisdiction.[12] The fact that the opinion the judges issues, whose charge, indictment, verdict, judgement, or sentence are concealed from the public, further undermines any argument the Federal government may advance for jurisdiction. The ATRC is therefore a manifestation of pure anti-Constitutionality. Regardless of the private or public nature of the way the ATRC deals with defendants, as though they were separate litigants, the fact that defendants in the ATRC have no right to a trial by jury is clearly unconstitutional.[13]

---

[9] The US has yet to remove members of the Federal Bureau of Investigation for engaging in acts of domestic terror in the ATRC.

[10] he US has yet to remove members of the Central Intelligence Agency for engaging in acts of domestic or international terror in the ATRC.

[11] The Sixth Amendment states: "In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence."

[12] While the actual language describes how the judge must determine whether the Federal government has correctly identified a defendant "as an alien terrorist present in the United States and that removal under other available legal means would pose a risk to national security," these determinations, are violations of the Sixth Amendment, since they give rise to the defendant's jurisdiction in the first place. The Federal government does not have a right to subject individuals in a criminal proceeding to separate proceedings, private or public.

Ananas-du-Faso () • The brand name for the pineapples Burkina Faso's agricultural revolution produces during the Ukraine war's anniversaries.

anti-dollar panic () • The fiftieth anniversary of the official sale of 2 million ounces of US government bullion on January 6th, 1975 occurred just weeks before the third anniversary of the Ukraine war. The sale, designed to induce a hysterical aversion to gold ownership, began a propaganda campaign to dissuade Americans from gold ownership. In his book The U.S. Dollar : An Advance Obituary, Pick explains how a "mass of buying gold was feared. It eventually could have led to an anti-dollar panic, which in turn could have led to a collapse of the global credit structure. To neutralize such dangers, strong anti-gold propaganda was begun as early as in November 1974. Television, radio, and newspapers warned the public not to buy the metal, claiming that it could not be resold profitably because of local taxes, refining costs, dealer mark-ups, etc. The expected results were achieved, and the gold rush did not take place. An official sale of 2 million ounces of US government bullion on January 6th, 1975, a week after gold freedom was restored, brought in bids for only 753,600 ounces at US 165.65 per ounce, just about 20.85 or 11 per cent below the free market bullion price a week before. The offensive against bullion, well planned strategically, did not lose momentum after the restoration of legal gold ownership in America." (pg. 62) Pick details US Treasury auction sales for the precious metal from May 23rd, 1978 to November 1st, 1979 in Table 19. (pg. 66)

Annapol'ye (Russian: **Аннополье**) () • Russia's Army Group North took control of the village Annapol'ye in the Volchansk region of the Kharkiv oblast (Russian: в Волчанском районе Харьковской области) on October 8th, 2026. The village is located 3 kilometers southeast of Petropavlovka (Russian: Петропавловка), which Russia captured on September 26th, 2026. It is located 1.5 kilometers from the river Khatomlya (Russian: Хатомля). Before military operations began, the village's population amounted to anywhere from 80 to 84 people.

---

[13] U.S. Const., Art. III, 2; S. Union Co. v. United States, 567 U.S. 343, 350–51 (2012). See Amdt 6.4.3.3 Petty Offense Doctrine and Maximum Sentences Over Six Months;

It is reasonable to argue that any judge who has served on its benches is a committed anti-Constitutional treasonous judge whose robe must be stricken from his or her shoulders immediately. It cannot be that a judge, Federal, State or Municipal, could ever mistake the complete lack of legitimacy of the ATRC with the everyday functionality of a court under Article III. The judge who issued the order in the aforementioned case (i.e., 2026-trc-1 (JNE)) committed an act of treason, attacking the "spinal column of American democracy." In the future he or she should be tried under 18 U.S. Code 2381 for he or she admittedly owes allegiance, if not by virtue of his or her certification at bar than by the oath of office he or she swore to protect, uphold or affirm at bench, when he or she issued orders whose effect amounts to a levy of war against the U.S. Constitution, which not only gives aid but comfort to anti-Constitutionality. The charge of treason should be applied to the Chief Justices of the United States, who appointed any one of the five judges at any time without objection, during the ATRC's thirty year existence.

America suffers from a bureaucratization of its three branches of government. In nearly every single one of its branches, enormous bureaucracies whose aim is to commit atrocities against the American people (See "Section 109" for the sake of the rich, a malignant cancer grows exponentially. The centralization of the various malignant cancers, in which the police State bureaucracy subordinates competing bureaucracies such as the financial bureaucracy (i.e., the US Federal Reserve, the Office of the Comptroller General, FDIC, Financial Crimes Enforcement Network (FinCEN), etc...) or the judicial bureaucracy (i.e., Administrative Office of the United States Courts, the Federal Judicial Center, the United States Sentencing Commission) to its mandate, has caused the Federal government to become the largest employer in the world. An enormous, amorphous monster, whose lifeblood depends not only on a steady stream of bodies, names, cases, lives or souls but an unrelenting, bottomless pit of money, barrels forward with America's people quickly falling underfoot into the abyss like Leviathan.[14]

America's 250th Anniversary () • Almost entirely hallowed out, the United States of America celebrates its 250th anniversary after Ukraine's fourth anniversary. With 40 trillion dollars of Federal debt, the United States celebrated without a single mega project to signify the greatness of Thomas Jefferson's Declaration of Independence, the Federalist Papers, or the Constitution of the United States of America; in the past fifty years (i.e., from 1973 to the present), the United States has produced literally nothing for the State.[15] Whereas in the distant past, the United States built or witness the building mega projects like the Empire State Building or the Hoover Dam, the United States has accomplished nothing in the way of magnificent infrastructure in the past fifty years.

The United States of America does not even have a Federal government. America's Federal government is just a vessel for the rich, private central banking, or members of the State security apparatus linked to one (i.e., the Federal government in AWS cloud), the other, or both, to extract capital from American working people in a multitudinous manner. While the complexity of the scheme is almost impenetrable, the 16th Amendment currently sanctions no less than seventy five cents for every American dollar income tax to the Federal government to pay the interests on its Federal debt.

It is incomprehensible how so many people can simply stand by while our County's workers' surplus value is simply hauled off daily at an alarming rate, while more than 75 cents per dollar of income tax pays interests to banks who loan money to the Federal government that the U.S. Treasury prints. Ridiculous in the extreme, the entire system is built on an expansion of usury. In the past fifty years (i.e., from the present to 1973), the United States has produced literally nothing. You would think that after 39 trillion dollars the U.S. would have impressive mega projects on display for the 250th anniversary. There is not a single mega project the U.S. can celebrate for the 250th anniversary.

anniversary () • An act of humanization is to commemorate the recurrence of a great historical event with celebration. The progression in history from agriculture, for instance, reflects this humanization in its progression towards historical events. In the Old Testament the Israelites transformed the important agricultural feasts into commemorations. The Passover, originally a spring festival for harvest, became a celebration for the exodus from Egypt; the Feast of Weeks, an old harvest festival at the end of the wheat harvest (Exodus 23:16; 34:22) became . The feast of booths, an old vintners festival, became the holiday of סוכות (Leviticus 23:42f). Heschel explains how "the unique events of historic time were spiritually more significant than the repetitive processes in the cycle of nature, even though physical sustenance depended on the latter." (Heschel, 1951; "Prologue," The Sabbath) Holidays are anniversaries.

Annenberg Foundation () • The Annenberg Foundation, one of the most important sources of free-market philanthropy in the history of the

---

[15] It is fascinating how the Former Commonwealth Countries have no problem finding a monument, statue or memorial from the Soviet Union ripe for destruction but the United States has hardly built a single monument, statue or memorial in the past fifty years, let alone for the great founding fathers of the republic.

United States for education, contributed significantly to the development of objective consciousness among the American masses with the release of the first precursor to the development of Massive Open Online Courses during the 1980s. In its publications, some of which are among the absolute best in terms of pedagogy, content or intellectual challenge, Annenberg inspired Americans to study Spanish, French, Physics, or the history of the West, broadcasting America's finest professors from the best universities in the world right into American living rooms on Public Broadcasting Companies' channels. In its release of Destinos, the Annenberg Foundation, provided Americans with the opportunity to study Spanish for free in 58 lessons; detailing the revelation a survivor of the Spanish Civil War, the war the Soviets and the Russians utilized to experiment with doctrine and weapons, discloses to his family about a forsaken bride, Destinos takes viewers from basic to intermediate Spanish. The legendary French in Action features the Capretz Method for learning language the creator of the course, Pierre Capretz, developed in his accompanying textbooks for the course. A 52 episode television series that combines language instruction with cultural immersion into a French family in Paris, France, Capretz produced the series at both Yale University and Wellesley College, the latter still being a leader in the pedagogy of foreign languages with its three part Italian course on edX[16]. Still widely used since 1987, French in Action is a classic for foreign language learning in America during the 1980s. Funded entirely by the Annenberg Foundation, French in Action provided Americans, tired, overwhelmed with debt, laboring under glass ceilings in industries whose unions long ago sold their souls to the Federal Bureau of Investigation for large salaries, a way not only to view an almost unreachable world abroad but adopt to the speaking lifestyle of its characters from the comfort of home. In its lecture series from the University of California, Los Angeles, the Annenberg Foundation provided Americans with a glimpse into the delicacies of the Western Tradition[17] over more than 3000 years of history.

The most famous of all projects the Annenberg Foundation released is a series of lectures by a professor named Goldstein at California Polytechnic State University, San Luis Obispo entitled The Mechanical Universe. In much the same way as Capretz own textbook for French in Action is a classic for language learners, Goldstein's own textbook, The Mechanical Universe and Beyond, is itself a classic. In the history of pedagogy for physics there is perhaps no better textbook than Goldstein's own.

Goldstein's lectures, which provided Americans with access to the history of science in terms of its development over time from the Ancient Greek discoveries in geometry through the Renaissance developments in the destruction of the Aristotelian universe to the emergence of the major contributors to theoretical physics such as James Clark Maxwell or Albert Einstein, are one of the most valuable for developing objective consciousness among the American masses. The Catholic Church, depicted in the video with revealing light, takes Galileo, the founder of law of inertia, to Court for his views on the relation of the sun to the earth in the revolutions of the heavenly spheres. Descartes, whose metaphysics, the Meditations, launched a major revision of the theoretical basis for being, unveils his geometric interpretation of algebra. Leibniz and Newton and their famous dispute over priority for the calculus play out across multiple episodes. Benjamin Franklin, whose mathematics the author appraises without a single doubt, receives credit for his discover of positively or negatively charged electricity. While the series hardly touches upon the subjects many of the figures from the Enlightenment raised in famous treatises, the series establishes a mechanistic point of view about the universe in a way no competing, contemporary, or pre-existing popular television series could have at the time. No MOOC has ever come to rival Goldstein's The Mechanical Universe. It is an all around classic.

---

[16] edX is one of many platforms online for self-guided learning. Since these courses do not require anyone to conform to a schedule with a date, time, or place, self-guided learners learning on these platforms can learn more rapidly.

[17] Weber's Western tradition contains a number of diamonds in the rough. One of the jems from his work is his discussion of the political forms of nation and state in the latter end of the documentary series. Weber in particular notes how rivaling powers developed a tendency towards partnership in response to the French revolution. Above all the ruling elite of the various nations and states wanted to avoid what the French witnessed with King Louis XVI in the French revolution. Weber notes how rivalries, however, subordinated the desire to cooperate for fear of revolution to the overweening desire for hegemony. Weber's ideas about cooperation have resurfaced in David North's proclamation that the ruling elite around the world are committed to reaction for fear of revolution. North's sale's pitch from Weber's description of cooperation is how the U.S. sells the advanced technological surveillance systems designed to prevent people, not just Americans or immigrants, from political action. North's ultimate dream is to establish a global police State where political actions are subject to a dystopian global police State bureaucracy. Chelsea Manning's diplomatic cables corroborate the effort; Snowden's disclosure promote the idea; Vault 7 provides a glimpse of its operations.

Sadly, the Annenberg Foundation's series are no longer televised on American television channels primarily due to the fact that there are no longer channels. Its era of television is no longer existent. While the series themselves advertise purchase video cassette, the most frequently visited sites on the Internet for torrents provide downloads with a large number of seeders.

Ardent, Hannah () • Hannah Ardent's book, The Origins of Totalitarianism, is one of the primary sources of inversion the Central Intelligence Agency exploits for transformation into a modern American playbook for engaging in the mass manipulation of America's public opinion. The definition of authoritarianism in Ardent's book is inverted so that rather than being points of descriptions scholars might like to employ as an instrument for identifying authoritarianism, these points suddenly become elements in a cause of action illegally deployed domestic agents must implement to ensure the agency's controlled control over American public opinion.

Artemis II () • Less than eight months after Elon Musk released a documentary detailing The Road to Making Life Multiplanetary for SpaceX to inhabit Mars on May 29th, 2025 with an uncrewed launch at the end of 2026, the National Aeronautics and Space Administration (NASA) announced the first crewed lunar spaceflight by the United States since Apollo 17 in 1972 with the earliest launch date scheduled for February 6th, 2026, only a few weeks before the fourth anniversary of the Ukraine war. Four astronauts are scheduled to fly around the Moon on Artemis II for establishing a long-term presence on the planet for exploration. Expected to last 10 days, the flight focuses on confirming which systems or hardware are needed for early human lunar exploration missions. Building on the success of the uncrewed Artemis I in 2022, Artemis II is a major deep space mission for American aeronautics.

Artemovsk (Donbas) village • See Bakhmut-Artemovsk.

---

[18] In his profound study of the social origins of the Soviet Union after Stalin's rise to power, The Revolution Betrayed, Trotsky explained how without a worker revolution based on the theory of permanent revolution but aiming to reintroduce Lenin's democratic centralism into the Communist Party, the degenerated Soviet worker's state would inevitably collapse from stagnation. Stalin's decision to impose Socialism in One Country on the Communist Party together with a series of bloody reprisals designed to effectuate a political genocide against the generation of

Artillery (weapon) • In a phrase coined by the gravedigger of the revolution,[18] Joseph Stalin, artillery is the god of war. The god of war, however, is now but only a vital component in an evolving array of combined arms in eastern Europe. In the beginning of the Ukraine war the media focused almost exclusively on parity. The number of Russian artillery guns, calibre, the number of munitions, the type of munitions, or the way in which the Russians accurately targeted Ukrainian targets demonstrated the advantage Russia weaned over its opponent. In nearly every category, the Russians managed to demonstrate a noticeable superiority, a superiority not merely in quantity but in quality. The range of Russian calibres for artillery, for instance, far exceeded that of the Ukrainians. Confined to the 155mm M777 howitzers, the Ukrainians could not exercise fire control over battle areas in the way the Russians did.

In the beginning of the Ukraine war, primarily before the great Ukrainian offensive in Kharkiv, launched on September 6th but largely until the end of Ukraine's 'Spring' counteroffensive in 2023, artillery played a dominant role on the battlefield. Ukraine's failed 'Spring' counteroffensive confirmed Russia's seizure of the strategic initiative after the fall of Bakhmut-Artemovsk on May 23rd, 2023. In the winter of 2023 the Ukraine war underwent a major transformation in the deployment of drones. Ukraine began to mass produce First Person View (FPV) drones to strengthen its defense of the Donbas in the face of continued Russian advances. Necessity is the mother of invention but the transformation could have come soon enough for Ukraine's defense of Avdiivka, a major turning point in the Ukraine war after the fall of Bakhmut-Artemovsk for Russian tactics (i.e., tunneling and FAB bombing with "glide kits") and Ukraine's deficiencies in artillery. Ukraine's FPV drones began to play a dominant role on the battlefield, overtaking but by no means substituting for the role artillery played in the beginning of the war. The first Ukrainian brigades with dedicated, trained, expert drone pilots began to take shape.

Asimov, Isaac () • Isaac Asimov, undoubtedly one of the great geniuses of America, produced an encyclopedia called Asimov's Biographical Encyclopedia of Science and Technology with no fewer than 1,510 entires. Covering the lives of more than 1000 great scientists from ancient Greece to the Space Age, Asimov's work celebrated its 60th anniversary during the second anniversary of the Ukraine war. Asimov's organization is not alphabetic but chronological.

Asimov omissions, however, are hardly palatable. In his description of Anaxagoras, Asimov omits any mention of the fact that Anaxagoras opposed the pre-Socratic materialists with his emphasis on the Ancient Greek word for mind, . While certainly the modern concept of consciousness is far closer to the Ancient Greek word for soul, Anaxagoras' opposition to the pre-Socratic marked a distinct break from the elemental theories such as earth, wind, fire, or water theories pre-Socratic philosophers like Heraclitus or Thales prophesied. Asimov omits Aristotle's discussion of these elemental theories in his treatment of being in the notes commonly called The Metaphysics.

Asopos () •

Astroturf () • In an article published under the title, "Tactics Used by Fossil Fuel Companies to Suppress Critique," a climatic activist explains an astroturf political entity arises when "corporations sponsor fake grassroots organizations, which are designed to appear as though

---

Octoberist workers confirmed Trotsky's analysis when the Soviet Union, suffering from years of Stalin's policies, disintegrated on 26 December 1991 by Declaration No. 142-N, a declaration the Soviet of the Republics of the Supreme Soviet of the Soviet Union made to dissolve the federation.

they are representing everyday citizens (Beder, 1998; Cho et al., 2011; Keller et al., 2020). These practices can rely on social media as well, setting up fake accounts and driving up engagement on particular topics to give the appearance of a coordinated grassroots movement (Chan, 2024; Keller et al., 2020; Kinder, 2024). While carefully masked behind local community concerns, following the funding and membership of these groups can demonstrate the presence of vested interests." An astroturf political entity is distinguished by its lack of a political party. An astroturf political entity thus falls below the scope of "Strawberry Statements" the Federal Bureau of Investigation exploits to launch entire movements around political parties such as the Socialist Equality Party.

Lina Attalah () • Lina Attalah is one of many journalists Al-Sisi' military junta imprisoned.

Aquinas, Thomas () • On March 7th, 2024, just after the second anniversary of the Ukraine war, Thomas Aquinas, a graduate from one of France's first universities, an intellectual giant who built a bridge from antiquity through the Dark Ages to the pre-Renaissance, celebrated his 750 anniversary. St. Thomas Aquinas is famous for his repudiation of usury in his magnum opus, the Summma Theologia.[19]

Professor Quigley Carroll, whose work is noteworthy for its appraisal of Aquinas' theory of revelation, places a special emphasis on Aquinas.[21] Aquinas belief in the revelation of theological truth over time through a dialogue within the community, Christian or otherwise, in its adaption to a changing world, is a reflection not only of tolerance and flexibility but Vico's and Hegel's understanding of history developing over time.[22] In a way Aquinas contributes to Hegel's theory that history is the history of the development of conscious freedom.

---

[19] During the third anniversary of the Ukraine war, the University of St. Thomas, Saint John Paul II Institute, began to offer a master's degree in the thought of John Paul II. With its first classes starting on January 12th, 2026, the program offers students the opportunity to develop an appreciation for St. Thomas Aquinas' repudiation of usury firsthand through the study Saint John Paul II on top of all 14 encyclicals with the opportunity to conduct research, a pilgrimage, and to study abroad in Poland, the country fast becoming the latest economic powerhouse of Europe. The classes are asynchronous so that working adults can accommodate their schedules. It is unclear whether the program offers the opportunity to complete a thesis but students who enroll in the program ought to demand as a prerequisite for payment of tuition the right to have a dissertation completed.

Aquinas, who sought to synthesize philosophy, is the first philosopher to consider different philosophic systems expounding the Abrahamic faith may be comprehended in terms of the latest developments in monotheism. Contained within Aquinas' Summa Theologica is not only a summary or a summarization of the preceding philosophic contributions to the Aristotelian idea of an unmoved mover is the synthesis of all preceding developments for understanding how the unmoved mover may related to man, history, or scripture. In that respect, Aquinas is a precursor for Hegel,[20] blazing the path the German idealist would take in his approach to the philosophical developments before, during, or after the Medieval within the context of the French Revolution, which introduced for Hegel into history a world spirit.

[21] In his appreciation of Aquinas, Quigley , however, fails to take note of the community in Thomas Aquinas' work. In his foreword (p17) to Quigley's book, The Evolution of Civilizations: An Introduction to Historical Analysis (1979), Harry J Hogan pointed out how the explanation for the "disintegration in the gradual transformation of social 'instruments' into 'institutions,' that is, transformation of social arrangements functioning to meet real social needs into social institutions serving their own purposes regardless of real social needs." While Quigley's rejection of the class struggle to explain society undermines his relation to the Western canon, Quigley's explanation would apply to most, if not all, of the institutions in the United States, especially those whose existence is neither derived from the U.S. Constitution nor the result of an Amendment. The vast majority of agencies, tens of thousands of commissions, offices, departments, bureaus, or corporations prove Quigley's point that the transformation of "instruments" into "institutions" has contributed to disintegration but the disintegration makes sense only when the cost for these entities to perpetuate the old, degenerated social order not only becomes an increasing burden on the worker but becomes the primary means with which the old, degenerate social order preserves the increasing burden at all costs. The absence of a theory of costs, so common to idealist and idealistic historians like Ardent, Spengler, or Quigley, belies at all instances of theorization the complete lack of any sense of wellbeing, livelihood, or life (i.e., community). Quigley thus fails to recognize the central activity of community.

Avdiivka (Donbas) village • Ukraine's defense of Avdiivka, a major turning point in the Ukraine war after the fall of Bakhmut-Artemovsk for Russian tactics (i.e., tunneling and FAB bombing with "glide kits") and Ukraine's deficiencies in artillery and its deployment of FPV drones, collapsed on January 17th, 2024.

Axe, David () • One of the more committed journalists of the Ukraine war, whose coverage of the Donbas, especially in the Avdiivka direction[23] from 2023 to the present, eclipsed others. Published primarily in Forbes, these articles are an important source of information. At a time when the majority of news from the frontlines comes almost exclusively from 'milbloggers,' Axe's analyses shed light on rarely mentioned or hardly examined aspects of the Ukraine war. These aspects, though without the extensive detail of a comprehensive study, allow readers to imagine the whole of the subconscious iceberg from a partial view of its conscious tip.

Forbes, however, is a publication with a purpose. Its annual lists of America's four hundred richest Americans shows how its purpose, however, may converge with another. These lists, for instance, constituted one of the Socialist Equality Party's primary staples of propaganda in the years preceding the 2008 subprime mortgage crisis, the decade after the party's launch of the World Socialist Website in 1998[24] under the pretense of a Marxian renaissance.[25] The SEP's early articles[26] demonstrate this convergence. Opposed to the decade of doldrums, history's acceleration, however, has required expanded coverage of more fundamental political issues such as the Ukraine war.

---

[22] Aquinas, Thomas (October 26, 2006). Summa Theologiae: vol. 1, Christian Theology: 1a. 1. Cambridge University Press. p. 102.

[23] One of the most important contributions to understanding the Ukraine's defeat in the Avdiivka direction is the 47th Mechanized Brigade in 2024. A prominent unit in the Ukrainian military, heavily involved in fighting Russian forces in the Avdiivka direction, particularly with Western-supplied equipment like M-1 Abrams tanks and M-2 Bradley fighting vehicles, the 47th Brigade perished within less than six months from its reconstitution. Deployed to Pavlohrad, 60 miles west of Pokrovsk, the front line in eastern Ukraine's Donetsk Oblast, fought desperately with the 31 M-1 Abrams tanks to stop Russian advances. Consequently, the 47th Brigade lost more than half of its company of 31 M-1 Abrams tanks to Russian attacks. While the attacks claiming these tanks vary, the vast majority of the attacks stem from Russian FPV drones. The perished 47th Mechanized Brigade demonstrated that Western military equipment, though not obsolete by any means, was, nonetheless, no match for Russia on the battlefield in the Avdiivka direction. The destruction of the first M-1 Abrams tank, long considered to be the world's best tank, shattered the illusion of the overwhelming invincibility of American firepower. Not only were the tanks underwhelming, they were distinctively vulnerable.

[24] The SEP's launch preceded the Federal Bureau of Investigation's launch of a Federal Intrusion Detection Network, or FIDNET, modeled after a famous program from Linux's suite of open source security software called Snort, a network intrusion detection system (NIDS). Mentioned in the article published on August 10th, 1999, under the title "White House plan for FBI Internet spying," FIDNET is one of the earliest precursors to the drag-net surveillance Edward Snowden exposed in his leak of secret documents from the National Security Agency (NSA). Originally exposed in an article published on July 28th, 1999, by the New York Times under the title, "The U.S. Drawing Plan That Will Monitor Computer Systems," FIDNET is a part of the pre-history to the U.S. conspiracy to deprive citizens of life, liberty, or the pursuit of happiness through the technological obliteration of the founding father's Bill of Rights, especially the Fourth Amendment. Although the early SEP article makes no mention of the U.S. Constitution, the legal critique, so famous now, would only become more provocative as the U.S. conspiracy strengthened its execution.

[25] In an article published on October 31st, 1998 under the title, "International school examines the century's central problems of history, politics and culture," the International Committee of the Fourth International emphasized how a "central premise guiding the school was that a renaissance of Marxism is fundamental to the development of a perspective that can answer the burning issues of the day—growing social inequality, deepening economic crises, the decline in the cultural level of society and the prevailing political paralysis of the workers movement."

[26] The first appears to be ["Gap between rich and poor is wider than ever," June 23, 1998] but many more follow: ["The Forbes 200 list: billions for the privileged few," June 30, 1999], ["Forbes 400 list of richest Americans: snapshot of a financial oligarchy," September 24th, 2004], ["Forbes reports bonanza for world's billionaires," May 9th, 2005], ["The very rich in America: "The kind of money you cannot comprehend," April 19, 2006], ["Forbes publishes list of 400 richest Amer-

Axe's ability to achieve T.S. Eliot's ideal for the portrayal of an event, however tainted by his ambition for a Ukrainian victory, in his reporting on the war could not but be a source of concern for a magazine dedicated to celebrating the richest 400 Americans annually. The inversion of the invisible but highly detailed iceberg from the visible but only slightly detailed tip in his writing provided readers with far more with which to imagine the truth than receive a programmed vision of propaganda. It is simply unacceptable. It is pure blasphemy! It would thus only be a matter of time before Forbes, whose aim is to articulate the interests of this wealthy elite, would clash with Axe's reporting on the Ukraine war, a war politicized to the extreme. At the end of the day, Forbes, famous for its annual celebrations of the country's top one percent, decided to fire Axe, terminating his coverage before the end of the Ukraine war, the outcome of which has been to deprive not only the present but posterity of one its auspicious eyes.

B

Badi, Carlo () •

Baudrillard, Jean () • A competent, well written, expositional writer, Baudrillard[27] accumulated a number of historical artifacts in the form of articles, essays, and books that are essential to the pre-requisite knowledge required for developing an understanding of the way the American ruling elite conceptualizes the effect in the execution of orchestration for crowd control, the choreograph social movements to a crescendo, or engage in the mass manipulation of American public opinion in a methodical, systematic, total manner.

Baudrillard is placed alongside, perhaps fairly or unfairly, such social critics as Zizek who are exploited for lack of orthodoxy for both a pedestal and a pulpit. By standing with one foot on Baudrillard's and Zizek's neck, the triumphant ”pure” Marxist fanatics cannot only claim victory but trumpet the preservation of orthodoxy. This is precisely what members of the Socialist Equality Party during the Anschluss period (i.e., 1998 to 2008). It is so-called the Anschluss period for the Socialist Equality Party, the Federal government's social-chauvinist plaything for orchestration, exploited these individuals for a ”Greater Marxism” in a propaganda campaign the likes of which only Joeseph Goebbels would have had the pettiness to denounced for Bolshevism! The Anschluss represented or corresponded, however, with one of the great contributions to the theoretical understanding of Marxism, despite the fact that the orchestrators of the debate, committed social-chauvinist, only masqueraded as revolutionaries under the banner of Trotskyism. Just as Engels wrote that history would have found a ”world spirit” in someone else for the lack of Napoleon, history furnished out of these exceptionally corrupted individuals a purity for the theory of Marxism true Marxists can only marvel. The debate against Steiner and Brenner, perhaps the greatest intellectual

---

icans,” October 6, 2006], [”The filthy rich: Forbes lists America's top 400 for 2007,” November 27th, 2007], [”America's “Fortunate 400” control vast wealth,” March 7th, 2008].

[27] Baudrillard's writings are essential reading for understanding the frame of mind in which the master of puppets strings labour. His books are the following:

orchestration of the 21st century, represented the contents of the Anschluss for Marxists. While the project ultimately failed by design, pure Marxists may, nonetheless, destroy their contribution in a characteristically Hegelian manner for the future of Lenin, Trotsky, Velt'man, or Deborin. While the activity of Marxism, the debate may claim, is thoroughly contained to paper, the paper lives.[28]

Babeuf, Gracchus () • In his book from 1796, Conspiracy of Equals, Babeuf famously stated: "We aspire to live and die equal, the way we were born: we want real equality or death; this is what we need. And we'll have this real equality, at whatever the cost. Woe on those who stand between it and us!" During the fourth anniversary of the Ukraine war, Babeuf's famous book celebrated its 230th anniversary.

Basel III Endgame () • During the third anniversary of the Ukraine war, the so-called Basel III Endgame came into effect. The Basel III Endgame is a series of international regulatory standards introduced as a result of the 2008 Financial Crisis. With rules on capital or liquidity for banks, the Basel Committee on Banking Supervision (BCBS), a panel formed by the Bank for International Settlements (BIS)[29] in Basel, Switzerland, initiated the implementation of the final components of the reform on July 1st, 2025 with a deadline for full compliance expected on July 1st, 2028.

Initially published in 2010, the passage of the Basel III Endgame led immediately to the rise in the price of silver after December 31st, 2025.

Bakhmut-Artemovsk () • The city whose fall sounded a death knell for the Ukrainian strategic initiative. Spelt Бахмут — Артемівськ in Ukrainian but — Бахмут — Артемовск in Russian, the city's history is unique.

During the Nazi retreat in the aftermath of Operation Barbarossa's failure in 1943, Manstein, the 1st conquerer of Sevastopol, an expert in warfare against the Soviets, the Field Marshall whose counterstroke against the Soviets at Orel created the Kursk salient, organized Bakhmut-Artemovsk together Slavyansk and Kramatorsk into the Nazi lynchpin of defense for the Donbas. It is alleged that the Nazis withdrew before the Soviets managed to lay siege to the city, indicating that the Nazis never lost but forfeit the city. The fall of Bakhmut-Artemovsk therefore contained immense political, historical, military significance for the Russians. Ukraine's inability to stand the village up against the Russians terminated its ability to cling to the mythological power of its stand against the Soviets during the 1943 Nazi retreat, severing the early Ukrainian Galician narrative from Ukraine's armed forces. The Russians sacked the stronghold at Bakhmut-Artemovsk, preventing the Ukrainians from being able to revive the myth of Manstein's defense. The Ukrainian affinity for Nazism, renaming its streets after members of the Galician SS,Nazi generals considered the Galician SS to be an militarily inferior unit in the Nazi Wehrmacht, denigrating its ability to conduct maneuvers, defend, or fight on the Eastern front. stopped, dying silently without much of a trace in the media.

Barabbas () • A magnificent man, a man of many talents, fond of alcohol, games, the harem, Barabbas is alleged to have been a Jewish bandit who encouraged large crowds to raise up against the Roman occupiers of Jerusalem, the center of the earth. Pardoned at the Passover feast by the eloquent, gracious, magnanimous Roman governor, Pontius Pilate, an executioner who deferred judgement on Jesus' death to the crowd that chose Barabbas,[30] Barabbas narrowly escaped death. Is Barabbas, a rhetorician, so awe-inspiring as to have compelled a crowd to select him over an ostracized, though marginally influential, prophet from Nazareth or were the crowds so cognizant of Pilate's dilemma as to have preferred a direct challenger to Rome's reign over the city than the hypothetical promise of its theological subversion through a universalization of Judaism from a man who rode into the city of Jerusalem on a donkey? Setting aside these two men, whose natures are equally obscure and inexplicable, what of the crowd? What is the significance of the crowd's choice? Did the crowd make a cognizant choice? If the crowd made a cognizant choice, why has so much history been dedicated to Jesus of Nazareth, whereas men like Barabbas, who embodied the spirit of defiance, the force of resistance, the soul of revolution, have been marginalized to the back pages of obscure variations in Biblical texts? Should not the world over celebrate the day Pilate pardoned Barabbas[31] as a great holiday for mankind? Is not the history of mankind the history of crowd struggle? The crowd struggled. The crowd chose. The crowd chose Barabbas but Barabbas pales now in comparison to the fame, legend, or mythology of Jesus. As opposed to Jesus, the day of the Passover feast in the year of Jesus' death is not the beginning of a new era! What treachery! The date in the Western tradition for the beginning of the new era should not be "A.D." but "A.P." It should start with the Passover feast when Pilate, whose address to the crowd emphasized his eloquence, whose deference to the crowd's judgement magnified his grace, whose pardon symbolized his magnanimity for all of mankind, decided to acquiesce to the crowd. Does Pilate's acquiescence not underscore how all of history is but the reaction to the actions a crowd takes? How could the entire history of mankind not been written for Barabbas, who gambled, who drank, who fornicated, the man whose humanity more resembles his fellow man than Jesus, who overturned tables of money at the temple (i.e., Matthew 21:12-13; Mark 11:15-18), who did not drink anything but water[32], who did not ravage but loved the adulteress and the prostitute and supervised a whore's atonement.[33] Why did humanity choose to follow the unpardoned, executed rather than the pardoned, living man? How could history have been so unfair to Barabbas? What of the crowds of mankind that chose to follow Jesus rather than Barabbas after Jesus' death? What of the crowds of man that chose to follow Barabbas rather than Jesus after Barabbas lived? What liveliness inspired the crowds following Barabbas to emulate his image?[34]

---

[28] The Russians have a phrase to describe the process with an Alexandrian flare. Рукопись не горит.

[29] The BIS is an global board for private central banks around the world.

[30] John 18:39-40

---

[31] Isn't Pilate's pardon an atonement? No longer subject to the death penalty, Barabbas became subject to himself. Is that not an atonement? "For the life of the flesh is in the blood." Leviticus 17:11 Certainly, Barabbas' blood continued to circulate throughout his flesh after Pilate's pardon.

[32] It is alleged, however, that Jesus was a drunkard because he drank wine. It is unclear to what extent he drank wine but there are apparently no passages from the haystack of variations in the disorganized, lost, historically unverified Biblical texts indicating he slurred his words, blacked out, or engaged in drunken brawls, all activities commonplace to drunkards at the time of the great Roman republic.

[33] How could Jesus have not liked prostitutes after the way the one from Luke 7:38 treated him. She comes up behind him unannounced. She drops down into position on her knees. She sobs uncontrollably, soaking his feet. She cleaned his feet with her hair. She kissed his feet all over. Did she lick his toes or heel? She poured perfume on his feet after she spread her lips all over them. Who would not like a prostitute like the one from Luke 7:38? What man would not like the whore from Luke 7:38?

In fact, Jesus appears to have equated the prospect for a prostitute's love to the height of her prices. Jesus' dialogue with Simon reads like a remarkably suggestive and provocative parable. After Jesus explains how a rich man cancelled debts for two men, one indebted to the tune of 50 silver pieces, the other 500, Simon asks him: Of the two forgiven men who do you suppose loved the borrower more? Simon says, "I suppose the one with the bigger debt." Jesus confirms his response. Luke 7:41-44 The confirmation, however, seems to suggest that the more a prostitute charges, the more she will love, since a person with the largest indebtedness is the one with the greatest love for the forgiving borrower. After all the difference in the constant between the debtors in the parable is nothing more than the amount of silver. The more silver, the more love. The less silver, the less love. The more debaucherous a prostitute solicits herself, the more forgiveness she may receive from Jesus. The more forgiveness she receives from Jesus, the most costly love she can offer back to him.

Bass, Saul () • In 1968 Saul Bass created a short documentary cartoon explaining the history of mankind through the creative process. Divided into eight sections: The Edifice[35], Fooling Around, The Process, Judgement, A Parable, Digression, The Search, and the Mark.

Bees () • Both Aristotle and Marx write about bees in their works.

Secretary Bessent at the Mad Hatter's tea party () • Secretary Bessent's time at the "Mad Hatter's Tea Party" on February 5th, 2026 played host to a conversation that became a quintessential example of a discussion where various topics are explored at length without a clear purpose, meandering through various topics with a clear objective, emphasizing the whimsical charm of Wonderland, as in Mad Hatter's tea party, in Alice's Adventures in Wonderland. Despite his appointment to be the Secretary of the Treasury, Congress asked questions about Immigration Customs and Enforcement (ICE) whose jurisdiction is under the authority of Kristi Noem's Department of Homeland Security, questions about Vladimir Putin's criminality whose purview is under the auspices of Marc Rubio's Department of State, about the printing presses in the U.S. Federal Reserve, to which Bessent exclaimed he cannot print "magic money" like the Robert Powell. Bessent discussed Donald Trump's frivolous 10 billion lawsuit against the IRS over his leaked tax returns, where the settlement would be paid entirely by U.S. taxpayers, if he were to win or the IRS settle.[36] Bessent discussed Iran where he claimed "[we] created a dollar shortage in the country." He continued, saying "It came to a swift conclusion. I would say the culmination came in December, when one of the largest banks in Iran went under after a bank run. The central bank had to print money."[37]

During the conversation, Bessent defended tariffs claiming "they are not inflationary," citing an exhaustive historical study on the subject by the San Francisco Fed.[38]Bessent could hardly contain from laughing. He almost broke face multiple times. The conversation, which spanned several hours, included many off the wall topics, subjects, or points Congress wanted to discuss that had almost nothing to do with the Secretary of the Treasury's office. Apart from the allusions to Twilight Zone, Never-Never Land, or the Wizard of Oz, Washington is starting to play out from years of repeated theatrics. The show must go on!

---

[34] The pardon is the first step in the history of the revolution. In the age of Dostoyevsky, the so-called *Петрашевцы* in 1849 survived a firing squad only to carry the light of Karl Marx forward until eventually Lev Davidovich Bronstein, a contemporary Barabbas the Russian proletariat selected twice to lead a revolution against the Caesar of Russia, received a kind of pardon in 1905 with the exile he successfully evaded.

[35] The Edifice, a four minute portion explaining four thousand years of history, appears in the first of Western Tradition.

[36] A hoax, the "leaked" tax returns were never leaked; the Federal government is so centralized that information about anyone related to its functioning is available on hand.

[37] The claim that Bessent's "dollar shortage" caused Iran's protests is heavily contested. Bloggers, for instance, claim a woman from a graduate school in Iran stripped to her underwear in protest of the country's draconian laws on personal choices for clothing.

[38] The study published by the San Francisco Fed on November 13th, 2025 is entitled, "What Is a Tariff Shock? Insights from 150 years of Tariff Policy." The study claims "a tariff hike raises unemployment (lowers economic activity) and lowers inflation." The study confirms what Bessent says but the problem in the U.S. economy for not inflation is unrelated to the requirement for lowered economic activity, since high economic activity does not cause inflation. The curse, however, is worse than the disease. Inflation results from a number of factors related to the yield curve on bonds. Since the U.S. Federal debt rises by 1 trillion dollars every 80 days now, the yield curves on U.S. Treasury bonds have to rise to offset increased risk; yield curves rise with inflation. Despite shocks by tariffs, the US yield curves continue to steepen, with 2s-10s now trading at 73 bps; its widest level since early 2022. The lowered economic activity is double edge sword; the less active Americans become, the less income tax money they generate; since more than 75 of the Federal debt is paid by American income tax, lowered economic activity will exacerbate risk for the Federal debt. The following companies, for instance, have laid off workers in just the last year

Bernouli, Jacob () • With his brother, Jacob Bernouli produced the first textbook for calculus that combined both methods for, differential and integral, calculus.

Belarus () • Belarus served multiple purposes throughout the Ukraine war. Prior to Vladimir Putin's decision to station a 24 nuclear armed warheads in the country, Europe's leaders silently plotted different ways to topple Lukashenko's government.

China recently entered the Belarus market. In just the last year alone, China installed production lines in Belarus designed to churn out no fewer than 480,000 ammunition shells annually. Chinese engineers set up the facilities, while Chinese workers now monitor production at the two new plants, demonstrating how the Ukraine war is accelerating the drive to expand militarism across the Eurasian continent from China to the southern borders of Europe. It is alleged that these two factories are producing the nearly half a million shells not for Belarus but for Belarus to shell to Russia in a scheme designed for China to evade Western sanctions.

BHP () • In a report published during the third anniversary of the Ukraine war[39] in 2025, SteelOrbis cited market sources and Chinese media to claim that Broken Hill Proprietary Company (NYSE:BHP), which is based in Australia, has agreed with China Mineral Resources Group, as well as Chinese steelmakers and traders, to terminate any or all settlements denominated in the dollar for payments to be settled exclusively in the Chinese Renmibi for 30 per cent of its spot ore trade with China, which includes CFR-based prices at Chinese ports. The agreement which took effect in the fourth quarter of 2025 represents a significant departure from settlements denominated in the collapsing US dollar, whose death became imminent shortly before the beginning of the Fourth Anniversary of the Ukraine war on January 29th, 2026, towards a system based on Eurasia rather than the West. Australia's decision is significant, for Australia is a stalwart accomplice in the American inspired, illegal, conspiratorial establishment of global surveillance with the Five Eyes. It means that one of America's primary sources of collusion for criminality on a global scale has begun to abandon the collapsed US dollar, which is in its death throes, for China, the Renmibi, and Eurasia's preference for transactions, just when the US, which requires iron ore for its attempt to re-introduced FDR's so-called "Arsenal of Democracy" is building a list of of critical minerals, deposits of raw materials, unique elements in the periodic table or rare

alone: Dell: 13,000, Intel: 27,000, Meta: 11,000, UPS: 48,000, FedEX: 12,000, Boeing: 17,000, Verizon: 15,000, Walmart: 12,000, Amazon: 30,000, Microsoft: 15,000, Citigroup: 20,000. These figure indicate just how lowered economic activity has become. The idea that a weaker dollar from tariff shocks may flip the 1.2 trillion dollar trade deficit to cash flow positivity is based on a remarkably unfounded assumption about macroeconomic history. No country in the history mankind has ever flipped trade from a deficit to a surplus in the amount of 1.2 trillion dollars.

[39] ["China-BHP Billiton negotiations on iron ore supply result in RMB trading settlement, opening new era," SteelOrbis. October 9th, 2025], ["BHP and China: Yuan Settlements Mark a New Phase in the Iron Ore Dispute," Breakwave Advisors. September 10th, 2025]

[40] US Secretary of Treasury, Scott Bessent, who is a beneficiary of the various illegal money laundering operations the US conducts as a matter of course on a daily basis in Congress, the Judiciary or the Executive Branches, claims Hamilton inspires Trump's "statecraft" in an op-ed piece he published on June 24, 2026 in the Wall Street Journal after Bessent delivered a convo-

earths for competition with China.[40]

---

luted speech the previous evening (June 23) at The Economic Club of New York's America 250 Gala Dinner. In the article, which is ridiculous in many respects, Bessent cited Hamilton's claim that the State must ”possess within itself all the essentials of national supply.” National supply, however, relates to nothing but the black hole for which the Pentagon has become famous with its inability to pass an audit or prices for parts exceeding 177,000 per cent of the original cost. The reference to Hamilton is a political affront, since Hamilton's money policies are responsible for the current state of America's indebtedness, which exceeded 40 trillion by the time Bessent published his article. Hamilton is the first American to request the establishment of a private central bank, the First Bank of America, that sold fiat currency to the Federal government with interest bearing loans. The First Bank of the United States became the nation's first central bank, chartered by Congress on February 25, 1791 after Jefferson struck a deal with Hamilton, for a 20-year term to stabilize the post-Revolutionary War economy with interest bearing loans. Hamitlon's policy, which not only Jefferson but Adams subsequently suppressed, managed two centuries later with Woodrow Wilson's establishment of the US Federal Reserve, which is now so irrelevant that Trump's administration, which has absolutely nothing to do with Hamilton, had no choice but to launch an irrational, costly, illegal war of aggression to control the price of gold the Fed could no longer suppress. Historians twenty, thirty, forty, fifty, a hundred, or hundreds of years from now will attribute the irrational refusal to repudiate a Hamiltonian monetary policy in the face of a rising Chinese gold standard to be one of the salient causes for America's decline, or, rather, the salient causes for America's decline derive primarily from its relationship with China in somuch as the insistence on provoking China, supplying gold to China from the LME, the LBMA (London Bullion Market Association), or the COMEX from 1983 onwards, deindustrializing America for exploit cheap Chinese labor in China, instigating China to develop a golden strategy (i.e., a stranglehold on raw materials, deposits of minerals, rare earths or unique elements), or compelling China to supplant the death of the collapsed US dollar with a global payment system so based on gold that no decision the US Federal Reserve could make any difference, inverting the primary aspects of its power.

It is thus incomprehensible that the US, which has leveraged its exploitation of the US dollar to a point where the world no longer views the instrument of exchange with anything but contempt that a revival of Hamiltonianism, which is essentially an attempt to revive the dominant US dollar, might succeed when the very cause for its collapsed is assumed in the proposal for its solution. Bessent's five points, none of which address the US dollar in its previously unchallenged dominance for global trade, have absolutely nothing to do with reality at all.

his death's 470th anniversary on the first anniversary of the Ukraine war. A Venetian Renaissance painter who was active in the Venetian Republic, Bonifacio's work had an important influence on the younger generation of painters in Venice, especially his work depicting a violent Christ. In a monumental painting recognized by Peter Humfrey and Philip Cottrell as an important work, Bonifacio depicts the dramatic moment when Christ, having come to the Temple Mount in Jerusalem, began to assault the money changers, the only time in the entire New Testament where Christ becomes unmistakably violent.

In keeping with the account in the Gospel of John (2:13-17), Bonifacio depicts Jesus with a whip formed of cords almost like that of a Roman legionnaire's baldric or cingulum militare, ready to strike one of the offenders, who crouches in fear. Crouched above an overturned table, he has raised his hand in defiance. He has a somber, agitated, guiltless look on his face. With one hand still on his table, he guards the scattered money (which is not depicted here) in an obvious display of defiance against Christ's authority. Overweight, pale as though the blood fell from his face, balding, the defiant money changer looks unmistakably sick, likely from his daily delight with the sinful practice of usury. Caged doves coo in front of Jesus' feet, signifying how the agents of peace, mercy or grace have yet to be unleashed. A Shepard drives oxen and sheep. The windows in the background are a dull, poor, almost cliche reflection of a white, rocky Jerusalem, showing nothing more than undistinguished, distant mountains below haplessly cloudy skies, almost as though to draw the viewer away from the heavens beyond or above to the scene inside of the Temple Mount.

Behind Christ stands a great menorah, higher than everyone and everything else at the very center of the painting, blazing with the reflection of a burnt offering right in front of a Cohen Jew, whose head is higher than all others, performing the ritual sacrifice bare foot with his head properly wrapped in correspondence with the laws, signifying the propensity among Ventians to elevate Judaism above Christianity in subtle, if not entirely prominent, ways. Bonifacio's depiction of the Cohen is thus curious. His attention to detail belies a surprising and unmistakably Jewish familiarity with the rite. In an interior inspired by the Church of San Salvador in Venice, a fully functional Temple Mount[42] with a red burnt offering in the fire thus offers the backdrop for Jesus Christ to unleash his violence at the money-changer's bloodless usury.

bricklayers () • "When a bricklayer[43] lays bricks in various parts of an enormous structure, the like of which has never been seen before, is it a "paper" line that he uses to help him to find the correct place to place each brick, to indicate to him the ultimate goal of the work as a whole, to enable him to use not only every brick but even every piece of brick, which, joining with the bricks placed before and after it, forms a complete and all embracing line? And are we not now passing through a period in our party life, when we have bricks and bricklayers, but we lack the guiding line, visible to all, by which to guide our movements? Let them shout that in stretching out the line, we desire to command."[Lenin. What is to be Done? 1902]

---

[42] By the time the House passed the State Department's bill with 3.3 billion dollars in aid for Israel on January 16th, 2026, the US had already given Israel 352 billion in aid since its founding but not a single one of these dollars ever went to rebuilding the Temple Mount. Can you imagine? 352 billion without a single ritual sacrifice on the Temple Mount? While Muslims are permitted to exercise the full range of their religions ((i.e., Shahada (the declaration of faith), Salah (prayer), Zakat (charity), Sawm (fasting during Ramadan), and Hajj (pilgrimage to Mecca)), Jews are not permitted to execute the full range of the mitzvot, especially those relating to the Temple Mount.

[43] In his book on Philosophical Investigations, Wittgenstein likens his idea of a language game to a bricklayer.

Bryan, Julien () • In response to the revivification of Trump's so-called hemispheric defense during the Ukraine war, an attempt to recall the power America wielded over Latin America from 1898 to 1991, has brought to the surface of America's buried, 8-mm, 16-mm, or 32-mm history the films of Julien Bryan, who produced twenty three complete documentaries on South America,[44] four on Latin America as a region; five on Chile, three each about Peru, Bolivia, and Uruguay; and one each concerning Argentina, Columbia, Venezuela, and Paraguay. Although produced under the auspices of the Office of the Coordinator of Inter-American Affairs to foster hemispheric solidarity, Bryan's documentaries are a far cry from what might be reduced exclusively to the role of propaganda. Bryan's videos provide a unique glimpse of Latin America[45] in the post World War II era of unrivaled American superpower that ended sometime before the launch of Russia's full-scale invasion of the Ukraine.

Although his analysis lacks the fire, resolve, or directionality of a communistic critique, Bryan's view of the regions of the world is a developing view of burgeoning classes of regional people. You can see these class descriptions in both his Latin American and his Middle Eastern documentaries.

In his depictions of the Union of Soviet Socialist Republics, Bryan portrayed a view of Russian life few contemporary filmmakers ever achieved. Bryan characterizes the vast, fundamental, life-changing progress the Soviet Union achieved for Russians quickly with a list of hallmarks, the chief of which is leisure.[46] Of leisure Bryan notes how the appetite for reading now is so keen for reading material that "often entire editions sell out overnight," whereas under the Czar "as much as 75 percent of Russians" could hardly read a letter, let alone write their own names. In the Soviet Union there is a palace for pop culture; admission is free. The Russians, Bryan observes, call vacation on the Black Sea a "sanatorium." On vacation, Russians find "unfamiliar luxuries, better food, new accommodations, or sandy beaches." At the time, Russians were beginning "to discover that leisure is a time for realizing personal goals and private aspirations." In conclusion, Bryan characterizes the twenty century dilemma in the challenge of leisure time. The Soviet Union is but one example for his vision of the working man. Nearly a decade later, Bryan continued to provide Americans, if not the Anglophone world, with a glimpse behind the Iron Curtain. In a film produced in 1978, Bryan took a new look at the Soviet Union.[47] Passing from the February revolution with dual power to the Bolshevik seizure of power, Bryan calls the revolution's leaders "Marxist intellectuals," a favorable designation. Bryan traverses the years from Lenin's death to Stalin's ascension, briefly touching on the devastating impact of forced collectivization under Stalin's

---

[44] Scholars tend to utilize multiple different types of categories to group Bryan's films. Chronologically, his films on South America are as follows: 1) 1941: Americans All; 2) 1942: Argentine Primer, Colombia: Crossroads of the Americas, Venezuela Moves Ahead, Roads South, Schools to the South, Children of the Americas; 3) 1943: Atacama Desert, Housing in Chile, Good Neighbor Family, Montevideo Family, Young Uruguay, Central Chile, High Plain, La Paz; 4) 1944: Lima, Lima Family, Bolivia; 5) 1945: Fundo in Chile, Paraguay, Peru, South Chile, Uruguay. There are other groupings, however; these other groupings are not chronological but based on the film's subject matter.

[45] Bryan's documentaries on the Middle East are equally valuable. In many of his documentaries on the Middle East, Bryan never fails to make mention of Christians, whose current role in the modern Middle East is far removed from the one contemporary Arab or Arabic news media envision.

[46] ["Leisure Time : U.S.S.R.," International Film Foundation. 1968]

[47] ["The Soviet Union: A New Look," International Film Foundation. 1978]

Five Year Plans. In his designation of the Soviet Union as the sole power in Europe after World War II, Bryan considers the Soviet Union's role critical to the Nazis' defeat. Bryan describes ordinary Soviet life.[48] Bryan concludes by saying, "Despite the high costs of Stalinism and the war, great progress has been made and Soviet society."

Brinkley, Christie () • In her memoir, Uptown Girl (2025), retells the life of a woman who lived a lavish lifestyle after Nixon removed the dollar from the gold standard on August 15th, 1971. By 1974, the twenty two year old Christie became "discovered" in Paris, France at a phone booth. Her discovery launched a meteoric modeling career that landed her on the covers of hundreds of magazines that helped create her legacy as an iconic supermodel during the 1970s. Although she lived more than fifty years under public scrutiny, Brinkley tells her roller-coaster life story, detailing how she traveled the world at the height of model wars, partied with the golden age of Hollywood royalty, starred in Blockbuster movies, hit TV series, rode horses with cowboys or strode across the stage at Broadway. A person can live fifty years without living a single day in five decades.[49] Brinkley is one of those people.

Byrne, Oliver () • Oliver Byrne's chromatic interpretation of Euclid's elements is a pedagogical novelty.[50] Published in 1847 by Pickering, the book interprets the figures in Euclid's elements, whose original work contained no diagrams of any type, in terms of color. Prefiguring the modernist experiments of Bauhaus and De Stijl movements, Byrne's elements come to life. While the lively concept of a chromatic interpretation of geometric shapes lights a fire in the imagination full of different colors, the use of colored diagrams and symbols in the ever increasing rigor of Euclid's latter proofs reaches a limit no less elucidating than the letters; a chromatic interpretation of geometric shapes is suddenly no less accurate than an alphabetic one. The overwhelming contrast demonstrates how mathematicians, who are accustomed to view the language of the universe from the practice of their own point of view in the canon, take the assumed media of expression for granted when in all reality the a description of reality may be as diverse as reality itself. Just Descrates interpreted algebra geometrically, Spinoza metaphysics, or Feynman the heavenly bodies (See Feynman), Byrne's interpretation of geometric with chromata represents a fundamental departure in the presentative historicity of mathematical expression. The fact that Byrne's rendition exceeded no more than Euclid's first six books emphasizes rather than negates the significance of his contribution for that field. Science does not meet art in Byrne's book; it is.

---

[48] Bryan makes about the notion of a free press is remarkably prescient. In the Soviet Union, Bryan narrates, "all form of communications are controlled by the State; every word in every newspaper and in every book must be approved before publication." Bryan's characterization of the Soviet Union's lack of a free press is precisely the type of control the United States of America has imposed upon its citizens; in the Federal Bureau of Investigation's attacks on the underground press, agents, quite like Stalinist, pursued the purveyors of the free press with an iron fist, grinding numerous American publications into the ground. The FBI's censorship of America's free press during the 1950s, 60s, 70s has resulted in the construction of a modern day state of censorship rivaled only by the late Soviet Union's own. In the book entitled, Unamerican Activities, the authors describe how the anti-American Hooverites adopted the Stalinist policies, arresting, for instance, an editor for one of journals the anti-American Hooverite's disliked more than 52 times. Whereas the Stalinist had ceased to arrest artists by the time Bryan released his new look of the Soviet Union in 1978, the FBI was busy persecuting artistic editors by the hundreds, if not by the thousands, to ensure that all forms of communication came under the anti-American Hooverite's control.

[49] Lenin often said: "There are decades where nothing happens, and weeks where decades happen. Brinkley is a witness to neither.

[50] In his Victorian book design from 1963, McLean mentions Byrne's work. The well-known lecturer in the study of information design, Edward Tufte, also refers to Byrne's book in his work on graphic design, a huge cardboard briefcase with a plastic handle containing four indispensable volumes detailing how aura of information in the eye influences the observer.[51] In 2010 Taschen republished the work in a facsimile edition.

C

Caesar, Julius () • Julius Caesar, a Roman, transformed Rome. In particular, Caesar implemented a new policy for Rome's money. In multiple ways, Caesar's monetary policy represented a revolution in the history of the Wester tradition. In terms of numismatics, Caesar's introduction of the Aureus, a gold coin, exhibited the superior craftsmanship that conveyed the spirit of Caesar's accomplishments. On January 10, 49 BCE, Julius Caesar crossed the Rubicon with his armies, marching on Rome. He quickly assumed power. The conquerer of Gaul, the single largest territorial acquisition in the history of the Roman empire by a single general, Caesar solidified his role in the history of the Roman empire. To celebrate his achievement, he set about to eradicate not only the debased silver denarius, or penny but the chaos of provincial coinage. He did so with a coin the Roman empire itself, that is, Caesar, issued. While these coins displayed his image, the coins restored the power over Rome's money to the Rome. It removed power over the supply of Roman money from the senators, whose offices both fed or thrived on the corruption money lenders fostered through control over Roman coinage. It represented a significant shift in monetary policy, for the policy not only centralized control over the coin but empowered Rome with the ability to create its own currency. The design of the Aureus, weighing 1/40 of a Roman pound at slightly less than 8 grams, sought to prevent counterfeit coins through sophistication; it relied upon a precise system of weights and measures; it standardized denominations, facilitating the process of prices, thereby allowing merchants to calculate payments for the exchange of goods quickly, efficiently, almost effortlessly. Records of one of the first Caesarian Aureus coins indicate that early in 46 B.C., four years after crossing the Rubicon, Caesar requested the Aulus Hirtius, a praetor with a history of close collaboration, to strike an Aureus with Caesar's likeness. The coin, which bears the legend C CAESAR COS TER, indicating Caesar third consulship, displays a veiled figure, either Vesta, goddes of the hearth, or Caesar himself in his role as Pontifex Maximus, thus highlighting his supreme religious authority. The reverse displays pontifical instruments: a lituus (augural staff), an aspergillum (sprinkler), a sacrificial axe, a simpulum (ritual ladle). The legend reads A HIRTIVUS PR, naming Aulus Hirtius as praetor. These symbols not only reinforced Caesar's image as a religious leader guarding Rome's traditions, its holiest of holies, but presented a degree of sophistication in design hardly replicable but by those most skilled in the art of counterfeit currency. Caesar's face on the coin, however, echoed his accomplishments such as his third consulship but served to guarantee for the citizenry the power of Roman coinage. Backed by the Rome that conquered Gaul, the currency escaped the scrutiny, suspicions, or distrust of those citizens or merchants who might otherwise doubt its solvency, liquidity, value, or exchange value. No longer subject to the whims or fancies of money lenders,[52] the Caesarian Aureus served as a symbol of Rome’s power.

---

[52] It is alleged that the primary motivation for Caesar's assassination is not his status, success, or victories but his decision to reform Rome's monetary system, restoring power to the Roman people rather than the money lenders.

In terms of economics, however, the numismatic achievements pale in comparison. The Aureus is no comparison to Caesar’s obliteration of Roman usury. Caesar’s decision to wage war on usury in Rome represented a fundamental break not only in the history of Rome but the Western tradition. It marked a distinct first attempt to introduce an order of rationality in service of need against the irrationality of greed; reorganizing the economy, Caesar’s decision checked the uncontrollable interests of unpatriotic Romans against the people’s collective satisfaction of needs within a preserved Rome. Caesar’s elevation of the interests of the majority of the working people in Rome over those of a few rich, elite individuals organized Rome’s economy anew.

Cairo, Hannah () • Hannah Cairo confronts a problem at UC Berkeley like the one Leibniz confronted at the University of Leipzig more than 360 years ago. Confined to a Department of Mathematics where her intellectual aptitude, natural ability, or mental acumen for problem solving are directed toward the acquisition of a degree with the concomitant honors than the pursuit of knowledge, UC Berkeley’s refusal to confer, bestow, or award the young genius with a rite of passage through the intellectually inferior institution is a sign that the university favors talent less than control. At a time when administrators outnumber academics at universities, the academic bureaucracy is a source of regression. The longer a student remains under the supervision of professors trained by years of experience with administrators to root out unique intellect, the more likely Cairo’s intellect may ultimately be rooted.

Leibniz, whose mathematical achievements range from the discovery of discrete mathematics to the calculus, submitted a thesis to the University of Leipzig before the first day of class, infuriating his ”superiors” to such a degree that they conspired to sabotage his receipt of a degree. On the fourth anniversary of the Ukraine war, Cairo faces the challenge Leibniz could not overcome at the University of Leipzig. A genius in mathematics, the existing academics at the time so loathed his talent that he had to major in law, of all subjects.

camera obscura () • ”If in all ideology men and their circumstances appear upside down, as in a camera obscura, this phenomenon arises just as much from their historical life process as the inversion of objects on the retina does from their physical life processes.”[53]

Cankerworm () • While many contend the cankerworm[54] to be a stage in the development of the famous locust, Joel 1:4 demonstrates how the various destructive stages of the locust as it grows from a larva are undeniably four separate animals (i.e., הַגזם, הארבה, הילק, החסיל), as is clear in the King James Version. After a few months, cankerworm sunk from the news.

cat () • An unholy, god-forsaken, cursed animal, the bible makes no reference to cats, especially pets. The silence the bible observes against the cat is certainly an unspoken commandment to forbid domesticating, keeping, or rearing the ugly, ignorant, disobedient creatures.

---

[53] Karl Marx’s The German Ideology celebrated its 180th anniversary during the fourth anniversary of the Ukraine war.

[54] The New World Screwworm, a type of parasitic fly whose larvae feed on the living tissue of warm-blooded animals like cows, horses or humans, began to infest American beef during the fourth anniversary of the Ukraine war. U.S. flesh-eating screwworm cases reached no less than 41 by July 20th, 2026. The USDA confirmed that by July the screwworm had infested no fewer than 32 animals, up from 16 two weeks prior. Screwworm larvae burrow into living tissue, causing severe wounds in livestock. Over 96 percent of cases are in Texas cattle with isolated cases in sheep, goats, or dogs. The outbreak began on June 3rd, 2026 (i.e., three months after Israel initiated its invasion of southern Lebanon on March 3rd, 2026) in a calf from Zavala County, Texas. The calf became the first case since 1966, the 60th anniversary of the first case. The screwworm celebrated its 60th anniversary during the fourth anniversary of the Ukraine war.

Capitalist Conspiracy () • In a documentary called Capitalist Conspiracy (1969) G. Edward Griffin erroneously claimed to reveal the history of an elite group with absolute power over the global economy. In a conclusion towards the middle of the documentary that pulls the opportunity for an Aristotlean catharsis right under from under the viewer, Griffin considered, of all organizations, the Council on Foreign Relations to be behind the cabal. While the Council on Foreign Relations is not the absolute power over the global economy, Griffin's documentary is, nonetheless, full of important pieces of information. While his documentary reveals the role of "rich socialists" at work behind the U.S. Federal Reserve system, the deficiencies of the film, however big or small, never manage to undermine the positive expositions to which Griffins subjects America's political system. Griffin's film reveals how America's political system relies upon a series of different levers to conceal the underlying problem in the United States: the U.S. Federal Reserve system.

One lever is "programming." He explains how "the human mind is like a computer. No matter how efficient it may be, its reliability is only as great as the information fed into it. If it is possible to control the input of the human mind, then no matter how intelligent a person may be, it is entirely possible to program what he will think." Griffin explains how just as a limitation on input controls output for a computer, controlling the information an American seeks to utilize for politics empowers the State with the ability "to program" its outcome. The example Griffins provides of "programming" is especially adept at a critique of the American politic system. Griffin's example is James Simon Kunen. In 1968, Kunen wrote a book called The Strawberry Statement: Notes of a College Revolutionary whose contents about petit-bourgeois student activism at Columbia demonstrate how a highly intelligent mind can be "programmed" to believe his actions are against the establishment. Although Kunen is likely a police State agent, whose book is the product of a police State conspiracy, the idea that an agent, no less so than a "highly intelligent mind," may be "programmed" to believe his actions are for the establishment through an inversion of the first proposition is precisely the type of programming for which Griffin's example is elucidatory. Accordingly, orthodox Marxists would consider Kunen in almost exactly the same way. Agents are programmed no less so than "highly intelligent minds."

Another lever is "pressure from above, pressure from below." Designed by Col. Edward Mandell House in his famous science fiction novel, Philip Dru: Administrator: A Story of Tomorrow, 1920-1935, the technique evolves in phases. The first phase is "to deliberately [create] problems and then offer only those solutions that result in the expansion of government." The second phase is "to create conditions so frightful at home and abroad that the abandonment of personal liberties becomes a reasonable price for a return to domestic tranquility and world peace." To put over police state measures at home, the ruling elite require crime, chaos, or anarchy in the streets.

Griffin's understanding of the Russian revolution, however, is extremely limited. Griffin is wrong to claim without evidence that "as far back as 1907 Trotsky was financed by British bankers. By 1917 the major financing for the communist revolution in Russia was coming through Lord Alfred Milner, the leader of that inner core within the roundtable groups and the Council on Foreign Relations. In

America Jacob Schiff of Coon Loebe and Company gave 20 million dollars to Trotsky. From Germany millions more came from Max Warburg . The communist movement not only in the United States but around the world always has financed by the international banking establishment." In support of his claim, Griffin provides no evidence but a quote from Carrol Quigley's book where Quigley writes: "It must be recognized that the power of these energetic Left-wingers exercised was never their own or Communist power but was ultimately the power of the international financial coterie." Quigley's remark, however, fails to establish Griffin's claim. Even assuming arguendo these claims were true, they would, nonetheless, fail to establish a basis for the trajectory of Russian society over the course more than a hundred years from the earliest days of the so-called Петрошевцы to the Большевики against the backdrop of three revolutions, the 1905 revolution, the February revolution or the October revolution. Money can buy a lot of things but money itself is not enough to overthrow a 304 year old Romanov dynasty. The idea that rich people control the world is as much a myth as the idea that people or money control the world, for they are but only factors in history. Griffin's understanding of communism may be encapsulated succinctly by his own description of Karl Marx: "Karl Marx [is] so insignificant that his own name did not appear on the Communist Manifesto for the first 20 years of its publication." Nothing more should be said about Griffin's knowledge of communism.

About change, Griffin's says: "This is why through the years Administrations change, party labels change, but major policies do not." The claim is often repeated now to distinguish China from the United States. Chinese experts claim the Administrations do not change, the party labels do not changes but the major policies do. It is ultimately a tautology, since in neither manifestation of the phrase is there any reason to distinguish the one from the other. It is important in all instances to identify the source of change.

In his treatment of black nationalism, Griffin admonished Black nationals for the claim that "Jews oppressed Blacks," demonstrating how the majority of the mortgages the Blacks owed in Harlem were not due to Jews but to a banking combine. Griffin quotes Quigley[55]: ""In the agencies of this power, he cited banks, the chief among which were Morgan Guarantee Trust and Chase Manhattan. And the foundations connected with these monoliths." Griffin's point that the presence of a Jew or several Jews in a body of political decision making does not mean that the world of Jewry, which is condemned to a toil perhaps even greater than the rest of the lot, is responsible for the body or its decisions.

Towards the end of the documentary, Griffin's list of twelve points may be reduced to a single invocation for the adoption of a monetary policy based on government issuance or control of the money supply. Griffin's treatment, however, is at best shallow. The invocation touches upon none of the battles the presidents of the United States from Thomas Jefferson to Abraham Lincoln guarantee the failure of a Hamiltonian monetary policy where the government purchases the money a bank makes ex nihilio on an interest bearing loan. At the end of his documentary, Griffin rightly categorizes those who willingly assistant in programming citizens to be “Statists,” a term rarely, if ever, used to describe the psychologically deranged mindset of American politicians engaged in this type of activity.

---

[55] In his books, The Evolution of Civilizations: An Introduction to Historical Analysis, and Tragedy And Hope; A History Of The World In Our Time, Carrol Quigley advanced the idea that an Anglo-American banking elite have spearhead a conspiracy to empower a global coterie of private central bankers to secure control over the global order, a derivative of which is control over America, America's institutions, its politicians, its political system, and, most importantly, its money (i.e., the U.S. Federal Reserve).Based largely on Carrol Quigley's ideas, the documentary fails to lay bare the social relations responsible for the rise of an "Anglo-American banking elite" or the historical processes involved in the instrumentalization of the U.S. Federal Reserve for the purposes the global coterie of private central bankers seek to exploit in a game of power. Griffins considers the underlying motivation for the rich and famous in politics is none other than a pastime, hobby, or sport. In reality, the ruling elite of the world are engaged in a historical war. Karl Marx, for instance, famously said that all of history is the history of class struggle.

Castel, Louis Bertrand () • Louis Bertrand Castel (November 11th, 1688 - January 11th, 1757) is a Jesuit savant, mathematician, physician, journalist, who produced a tractate on color called L’Optique des couleurs. (1740)

Chandler, David G. () • David G. Chandler, a British military historian with a focus on France, the French Revolution, and Napoleon, published consummate scholarly works Napoleon Bonaparte, his campaigns, and their aftermath on Europe.

Cedar, Cedar of Lebanon () • Known for its glory, the most famous tree of antiquity (1 Kings 5:6) (Latin Cedrus libani), Hebrew ארז[56], reached heights well beyond 100 feet or more with a trunk diameter of 6 to 10 feet (Isaiah 2:13; Ezekiel 17:22; 31:3).

Its timber, a source of construction for palaces such as David’s or temples such as Jerusalem’s (2 Samuel 5:11; 1 Kings 5:5, 6; 7:1-12; Ezra 3:7), became the most sought after material in the Mediterranean. Hiram I of Tyre had, for instance, fell cedar in the Lebanon region for Solomon’s Temple (1 Kings 5:6-9). Solomon covered the inside of the Temple (I Kings 6:18) with cedar, whose innocuous, thick, fragrant smell could not but have took the breath away from entrants. On the outside, blocks of cedar gleamed reflections of the sun from its shinny contours (I Kings 7:12). So important to the religion, Solomon constructed the altar entirely from cedar. Solomon’s encyclopedic knowledge ”from the cedar in Lebanon to the hyssop that grows in the wall” (1 Kings 4:33) places cedar at the zenith.

indent In a renaissance of Solomon’s love of cedar, cedar constituted a large portion of the Second Temple (Ezra 3:7). Wood hewn in Lebanon, for instance, constituted the material required to build the Sec-

---

[56] In his dictionary, A Concise Hebrew and Aramaic Lexicon of the Old Testament, William A. Holladay cites no more than than (1 Kings 5:13) to claim ארז is a ”kind of tree, and its wood, from Lebanon, used for beams, paneling, pillars, traditionally attributed to cedar, (Latin Cedrus Libani Barrel) but more than likely the fir, (Latin Abies Cilicica), or ”another evergreen with long trunk.” (p.27) See Zephaniah 2:14 for ארזה. Holladay’s observation, however, accords with that of the Mishnah, except only in so far as the term applied to six more species than strictly Cedrus Libani.

[57] Israel’s renewed hostilities against Lebanon, whose national emblem is the Cedrus Libani, during the fourth anniversary of the Ukraine war are rumored to be based on a conspiracy to fell Lebanese timber for the construction of the Third Temple in Jerusalem. Initiated on March 3rd, a few days after President Donald J Trump began his orchestration against the price of gold, the Lebanese war witnessed Israel expand its northern borders with Lebanon towards the Litani river. Israel, for instance, occupies the area for Law No. 201 from 2011 in which the Beit Leef Nature Reserve in the Bint Jbeil District is confined.

Even if there are few to no trees of the type Cedrus libani in the Beit Leef Nature Reserve or south of the Litani river, Lebanon is itself reminiscent of the Temple. In his secret meeting with the great Roman general, Vespasian, Yohanan ben Zakkai equivocated Lebanon to the Temple in Jerusalem in his prediction about Vespasian, citing Isaiah 10:34. (See Babylonian Talmud, Gittin 56b; Lamentations Rabbah 1:5 31) Prime Minister Benjamin Netanyahu would like to reverse Jewish leadership from rabbis to priests with the Third Temple. Herein lies the key to unlocking the mystery of Netanyahu’s reading of Barry Strauss’ Jews vs. Rome: Two Centuries of Rebellion Against the World’s Mightiest Empire (August 19th, 2025). Tyre, not only one of the eight nations condemned in the opening oracles the prophet Amos (Amos 1:9-10) delivered but the object of lengthy oracles the prophets Isaiah and Ezekiel (Isaiah 23; Ezekiel 26-28) delivered, became the site of significant military activity in southern Lebanon almost immediately. On April 19th, 2026, for instance, the Lebanese army posted an announcement, describing how ond Temple at Jerusalem (Ezra 3:7) that Joshua and Zerubbabel imported from Tyre and Sidon.[57]

The Mishneh (Red Heifer 3:4) describes how no fewer than seven species of cedarwood existed at the time the Temple Priests, adorned in elaborate garb according to the Laws, fired the pit for the Red Heffer. A later book in Numbers (24:6) mentions how the cedar grows beside water, whereas most are on hills embedded deep within Lebanon's bosom but butressed by its famous mountains. A statement from Rosh ha-Shanah 28a proscribes cedar to the inhabitants of Palestine for more than ten different trees, corroborating the Mishneh.

Cedar is a source of manhood. A maiden chooses her lover as a choice cedar (Cant. v. 15). In (Ezekiel 31:3), the Assyrian nation and in (Amos 2:9), both strong nations are compared to cedar. In the context of a call to burn Lebanon's cedars, cedar becomes synonymous with power in Zecharia (11:2) (Hebrew: הבצור) where the author obviously associates the strength of cedar trees for use in fortifications with the power of fortifications. Job compares the power of cedar to that of the Leviathan (Job 40: 17)

In Ezekiel cedar is a coveted source of material for masts. Tyrian traders, for instance, fell the finest cedar from Lebanon or Antilebanon (Sirion) for masts (Ezekiel 27:5). The finest furniture is crafted from Lebanese cedar (Song of Songs 3:9). Employed in ceremonial purification (Leviticus 14:4; Numbers 19:6), the fragrance alone is unmistakably remarkable (Song of Songs 4:11). Moses, a righteous murderer but an unequivocally great leader for the Jews, ordered Hebrew priests to treat leprosy with Lebanese cedar's bark עץ ארז in Leviticus 14:1–4.[58] See also (Leviticus 14: 4, 49, 51, 52). Cedar evidences luxury for a land (Isaiah 41:19), while the prosperity of the righteous derives from its own presence (Psalms 90: 13 [A. V. 12])

A noble tree of great historical significance to the Levant, the cedar survives in Syria's mountains but flourishes in the Taurus mountains of Asia Minor[59] whose significance grew immensely, as the Ukraine war on the Pontic Steppes in western Eurasia celebrated anniversary after anniversary. The eruption of war in east Eurasia with President Donald J Trump's illegal war of aggression against Iran her-

---

its engineers were engaged in the reconstruction of the Tyre bridge Israel's IDF had destroyed. Israel's IDF decimated two houses in Tyre, southern Lebanon (i.e., صور) in a series of air strikes in May. [May 22nd, 2026 الحدث غارات إسرائيلية على مدينة صور] Israel's own IDF released instructions on June 2nd, 2026, ordering Christians to evacuate Tyre, if Hizbollah refuses to withdraw. [June 2nd, 2026, CedarNews,الجيش الإسرائيلي: سنصدر تعليمات بإخلاء الحيّ المسيحي في صور إذا لم يغادره عناصر الحزب] An article published in the New York Times with a headline on the front page followed but a two page spread on page A8 makes absolutely no mention of cedar, even though it suggests Netanyahu's regime might have exploited an extraordinary number of brush fires to conceal wide layers of deforestation throughout Shiite villages in the buffer zone. [”After Lebanon Cease-Fire in April, Israel Razed Villages.” October 26th, 2026] The article details how Netanyahu's regime achieved a ”scale of destruction in southern Lebanon [surpassing] that caused by the country's 15-year civil war, several foreign invasions, and two previous wars between Israel and Hezbollah, experts say.” Without any mention of the number of cedar or cedar related trees, the New York Times claims ”[more] than 900 olive trees were bulldozed in a grove near Meiss al-Jabal.”

[58] The Hebrew word עץ apparently does not set a precedent for an explicit denotation on the parts of the tree (i.e., such as bark) but certainly appears to be something along the lines of cedarwood or pieces of cedar, as עץ ארז appears in (Numbers 19: 6). Whereas העצים מין הארז in (1 Kings 4:33) contrasts with that of ארזים in (1 Kings 5:6), the plurality of העצים מין הארז certainly suggests partiality for עץ ארז.

[59] Coinage first appeared in Asia Minor. The Hebrew word, which is still in circulation today, for a coin, שקל, derives from a verb still in circulation today, לשקל. The coinage based on precious metals began to rise in significance, as the United States witnessed a historic decline in the US dollar derived from its debasement. Although applied metaphorically to American coinage (as the US Treasury abandoned precious metals for circulation), debasement came to signify the inevitable, inescapable, irreversible process by which the heavily indebted sovereign began to devalue its own currency to keep current on its debts.

alded a new era for the significance Asia Minor beholds.

Celebration of Ignorance () • In his book under the title, ”The Demon-Haunted World: Science as a Candle in the Dark,” Carl Sagan writes: ”I have a foreboding of America in my children’s or grandchildren’s time–when the United States is a service and information economy; when nearly all of the manufacturing industries have slipped away to other countries; when awesome technological powers are in the hands of a very few, and no one representing the public interest can even grasp the issues; when the people have lost the ability to set their own agendas or knowledgeably question those in authority; with our critical faculties in decline, unable to distinguish between what feels good and what’s true, we slide almost without noticing, back into superstition and darkness. And when the dumbing down of America is most evident in the slow decay of substantive content in the enormously influential media, the 30-second sound bites now down to 10 seconds or less, lowest-common-denominator programming, credulous presentations on pseudoscience and superstition, but especially a kind of celebration of ignorance.” (1995)

chervontsy () • chervontsy

Cinq Chevaux () • René Lalique’s ”Cinq Chevaux” (Five Horses)[60] car mascot from August 26, 1925 celebrated its 100th anniversary during the third anniversary of the Ukraine war. Commissioned by André Citroën, Lalique’s ”Cinq Chevaux” is a stunning Art Deco masterpiece designed exclusively to mount on the hood of the Citroën 5CV. Lalique’s “Cinq Chevaux” mascot depicts five overlapping horses rearing on their hindlegs, symbolizing the car’s strong horsepower engine, ready to rev into action. The ornament’s evocation of speed and its dynamism demonstrates Lalique’s virtuosity and skill as a glassmaker and succinctly captures how the spirit of the age of the machine derives from the era of horse drawn carriages.

The Colorado River () • Just before the fourth anniversary of the Ukraine war, the Colorado river became a river spirit all over again. On January 13th, 2026 the Colorado River Indian Tribes granted the Colorado River the legal status of ’personhood,’ a first-of-its-kind move meant to protect the waterway as a living entity, implicitly reviving Indian religious beliefs long suppressed in contemporary American Judeo-Christian law.

Currency () • Currency determines power in geopolitics. During the Ukraine war, the role of currency became a determinant factor for differentiating great powers. During the third anniversary of the Ukraine war, China became the first country to pay a country’s central bank in Africa exclusively in the Chinese Yuan.[61] Zambia, Africa’s second largest source of Cooper, became the first country in Africa to confirm accepting the Chinese Yuan for mining taxes. Bloomberg reported that Chinese mine operators are now settling part of a major tax obligation for commodities contracts in the Chinese Yuan, demonstrating the ever diminishing role the dominant American dollar plays in Africa. China is Zambia’s largest exporter for cooper; it has become the Central Bank of Zambia’s largest creditor.

In a major demonstration of China’s knowledgeable exploitation of Sun Tzu’s principles of business, China began to accelerate the process of issuing bonds denominated in the U.S. dollar during the Ukraine war, empowering China with the ability to leverage the U.S.’s own currency against the U.S. Federal government’s own systematization of sovereign indebtedness. For the first time in history of the world that a major economic power openly exploited the currency of its competitor for its own advantage in geopolitics.

---

[60] Lalique’s ”Cinq Chevaux” bare a striking resemblance to the four horses at Saint Mark’s cathedral called collectively the Horses of Saint Mark.

[61] [”Chinese Mining Companies in Zambia Start Paying Taxes in Yuan,” Bloomberg. December 31st, 2025]

Chasiv Yar () • On July 31st, 2025, Russia's news agency, *Регнум* reported the fall of Chasiv Yar in the Donetsk People's Republic.Army Group South, whose commitment to Chasiv Yar, finally terminated one of the processes in the war that Wagner's Private Military Company could not after the end of Bakhmut-Artemovsk, the battle whose outcome determined not only the fate of the Ukraine war but sounded the death knell for America's delusion of "rules based order" its military cannot enforce.

With the battle for Chasiv Yar having raged for more than two years, the Russian seizure of Chasiv Yar resulted not only in the loss of the largest Ukrainian army group but the one of Ukraine's longest standing stronghold. [" ," . 31 , 2025.] Though not quite as significant as Pokrovsk or Shevchenko, the fall of Chasiv Yar represented a defeat, for Ukraine's strategy in the eastern Donbas, overcasting the agglomeration of villages surrounding the outskirts of Bakhmut-Artemovsk with a black cloud.[62]]

Chevreul () • Michel Eugène Chevreul (31 August 1786 – 9 April 1889), whose 240 anniversary from the date of his birth coincided with the fourth anniversary of the Ukraine war, produced a number of important works on color during his study of textile dyes while director of the Gobelins Manufactory in Paris led to color theories that "provided the scientific basis for Impressionist and Neo-Impressionist painting."[63] The most important of these works is: The Laws of Contrast of Colour and their Application to the Arts. London : G. Routledge Co., Farringdon Street. (1857)[64] where Chevreul confirmed several novel hypotheses on the contrast of colors, namely, the simultaneous contrast.[65]

In 1824, Chevreul, like Newton, entered into civil service. Although Chevreul worked at the Gobelins Manufactory in Paris, while Newton worked in the Royal Mint, Chevreul reflected deeply on the observations he made in response to complaints about technical inadequacies. Chevreul called the tendency for a color to appear to shift toward the complementary color of its neighbor, both in terms of hue or darkness, "simultaneous contrast."

chifforobe () • The phrase "to bust up a chifforobe," employing a quaint Southern euphemism for sex, is a pivotal point in Harper Lee's novel, To Kill a Mockingbird. In the story, Mayella Ewell, a white woman, asks Tom Robinson, a black man, to come into her house to chop up an old wooden cabinet (chifforobe)[66] for firewood in exchange for a nickel, which serves as a the pretext for her false accusation of rape against him.

In a stunning reflection of unremitting racism in America, the women who accused Bill Cosby of ”rape,” the allegations of which are completely ludicrous, are all women who in one way or another asked the esteemed comedian ”to bust up their chifforobe” but later, years later, many turned on the old man to use the chifforobe as a pretext for false accusations of rape. These women were Mayella Ewells.[67]

[62] ["Огнеупорная родина Кобзона. Часов Яр дождался часа освобождения," *Регнум*. 31 июля, 2025], ["Российские военные освободили Часов Яр в ДНР," *Регнум*. 31 июля, 2025

[63] Itten, Johannes. The Art of Color. New York: 1961.

[64] The French title from 1839 is De la loi du contraste simultané des couleurs et de l'assortiment des objets colorés.

[65] Van Gogh apparently incorporated the idea of "simultaneous contrast" into his art, as he explains in a letter to Theo van Gogh: "this reciprocal heightening is what's called the law of simultaneous contrast...If the complementary colors are taken at equal value, that is to say, at the same degree of brightness and light, their juxtaposition will raise both the one and the other to an intensity so violent that human eyes will scarcely be able to bear to look at it."(Br. 1990: 497 | CL: 401 From: Vincent van Gogh To: Theo van Gogh Date: Nuenen, on or about Saturday, 18 April 1885)

[66] The chifforobe itself symbolizes private family secrets and intimacy, and its destruction through wild sex represents the breaking of these societal barriers, violating strict racial and social taboos from Deep South in the 1930s.

chain () • ”Every question ’runs in a vicious circle’ because the whole of political life is an endless chain consisting of an infinite number of links. The whole art of politics lies in finding the link that can be least torn out of our hands, the one that is most important at the given moment, the one that guarantees the command of the whole chain, and having found it, to cling to that link as tightly as possible.” [Lenin. What is to be Done? 1902]

Chomsky, Noam () • Chomsky[68] is one of the linguists whose theories on the structure of language (i.e., syntax) contributed little to nothing at all to development of the large language models required for the breakthrough in Artificial Intelligence witnessed with OpenAI’s release of ChatGPT (during the Ukraine war).[69] No computer scientist, for instance, utilizes the Minimalist Program for parsing natural language sentences. In his own turn, Chomsky associated the responses ChatGPT produces with ”glorified autocorrection,” disputing the idea that AI generates grammatically sound sentences.[70] Computer scientists have utilized a wide range of different linguistic theories for natural language processing (which used to be its own subject of study in academia but has since become subordinated to the study of AI).

Chomsky’s role in the area of politics sought to present intellectuals with the opportunity to represent the left without Karl Marx. It is unclear whether the books Chomsky writes are intended to be critiques against American society or manuals.

At least one of Chomsky’s critiques serves as a primary textbook for candidates in one of the Central Intelligence Agency’s training programs. Although the name of the program is unknown, its purpose is not. Chomsky’s book, Manufacturing Consent, leaves no doubt about program’s purpose. Whereas Chomsky criticizes the ”effective and powerful ideological institutions that carry out a system-supportive propaganda function, by reliance on market forces, internalized assumptions, and self-censorship, and without overt coercion,” the CIA program teaches its trainees how to empower institutions with ideology for the sake of carrying out a system-supportive propaganda function. By teaching trainees how to rely on market forces, compel journalist to internalize assumptions key to its successful mission or enforce blacklisted ideas for self-censorship, the agency teaches its trainees how to manufacture consent in the American public.

---

[67] In an article, the sensational, Corriere della Sera published on June 2nd, 2026, under the title, ”Bill Cosby, il tribunale di Los Angeles conferma il verdetto per l’88,” the newspaper stated: ”Bill Cosby, il tribunale conferma il verdetto: risarcimento da oltre 19 milioni di dollari per aggressione sessuale.” chifforobes cost 19 million in America.

[68] Just as the head of the Central Intelligence Agency William J. Burns had, Chomsky met Jeffrey Epstein. [”Epstein’s Private Calendar Reveals Prominent Names, Including CIA Chief, Goldman’s Top Lawyer,” Wall Street Journal, April 30th, 2023], [”Jeffrey Epstein Moved 270,000 for Noam Chomsky and Paid 150,000 to Leon Botstein,” Wall Street Journal May 17th, 2023]

[69] ChatGPT marked a major turning point in the history of the development of AI. An article published in the Washington Post on December 5th, 2025 confirmed that ChatGPT has started the AI race. [”ChatGPT started the AI race. Now its lead is looking shaky,” Washington Post December 5th, 2025] It has not been that a reverse engineer has conclusively demonstrated that the competing codebases the competitors such as OpenAI, Meta, X.AI, or Google are developing to win the AI race are truly distinct. A central lie in the Silicon Valley investors exploit to extract capital from technology on the stock market is kernalization. Similar to the way that Linux distributions are all based on a single kernel, the AI these competing companies are developing may not be truly distinct. Given the priority the Federal government has place on the development of AI there is every reason to suspect that unless or until a reverse engineer demonstrates that the binaries for these programs are truly distinct, these competing Silicon Valley companies, some of which are called, the Magnificent Seven, may be cooperating.

[70] The fact that ChatGPT generates grammatically sound sentences literally obliterates Chomsky’s theory of ’innateness’ (i.e., Cartesian dualism) since there is no consciousness associated with ChatGPT.

CIA (Abbreviation) Noun • It is often claimed in print that the CIA (Central Intelligence Agency) predicted the beginning of the Ukraine war. It is true. The CIA forecast Russia's full-scale invasion less than two weeks in advance. [71] In the publications in Ukrainian, Hebrew, Russian, or English, the majority of the accompanying images are pulled directly from an article published seven years ahead of its time. On Mar 9, 2015, Stratfor published its famous article, "Gaming a Russian Offensive." The scenarios the CIA discusses in its forecast are replications of those from Stratfor's article. The arrows in these sets of images follow those in Stratfor's article.

It is interesting how these new images spiral outward from a common source almost like a Fibonacci sequence, adding more arrows with the fractionalization of the original scenarios. In one of the articles published by *Українська правда*, the newspaper reports on February 12th how "Росія має 9 маршрутів сэргнення до України, танки можуть сягнути Києва за 2 доби - розвідка США". A few of these nine routes, as impractical as the aforementioned fractionalization, could not have been farther from the truth, as the Russia massed scores of Russian troops on the highways into the Donbas, where the majority of the fighting raged for years before Russia launched its full-scale invasion. These three additional scenarios exceed Stratfor's original six.

Clark, Kenneth () • Kenneth Clark's rendition of civilizations, which falls just slightly below Eugene Weber's Western Tradition[72] with its relative scope centered on art exclusively, received a marked revival during the Ukraine war for its lack of art. Whereas in previous centuries, mankind sought to portray evil deeds in great paintings such as Picasso's depiction of Hitler's bombing of Guernica during the prelude to World War II in the Spanish Civil War,[73] few to no artists have sought to portray any of the events in the Ukraine with the characteristic mark of distinction one might elevate to the heights of art, artistic expression, or the mediums of light, color, or material. The Ukraine war has thus far been as lacking in artistic expression as the wars preceding Russia's full-scale invasion of the country. While few to no artists have had much to say or paint about the wars preceding U.S.-led NATO's support for Ukraine, arising from the war is but a mute, bland, color blind scene where little to nothing is considered great art.

---

[71] It is hard to imagine a time before the Kyiv Independent, the newspaper the Wall Street Journal tapped to cover the Ukraine war with the immediacy the U.S.-led NATO alliance demands for its rolling propaganda. *Українська правда*, however, is one of the few Ukrainian newspapers whose history of publication precedes the struggle for Ukraine. It is thus a newspaper preceding the Kyiv Independent's coverage on the Ukraine war. It published the majority of the articles covering the CIA's predictions. In one of these articles, the headline describes the attack to be within days: "Байден вважає, що Путін може напасти на Україну в найближчі дні – The Guardian," *Українська правда*, 11 лютого 2022. The first of these is reporting on The Guardian. It is a reference to the The Guardian's article published on February 11th under the title, "US warns of 'distinct possibility' Russia will invade Ukraine within days." Reporting on Der Spiegel revealed the date: ["ЦРУ назвало імовірну дату нападу Росії на Україну – Spiegel," *Українська правда*, 11 Лютого 2022]. A reference to the Der Spiegel's article published on February 11th under the title, "CIA rechnet mit russischem Angriff kommende Woche," the so-called імовірна дата could not have been vague in German. Another published a day after these read: ["Головні новини п'ятниці та ночі: ймовірний напад Росії, санкції РНБО, *Українська правда*, 12 Лютого 2022"].

[72] Kenneth Clark's thirteen episode series covers art from the Dark Ages to modernity. It is one of the seminal accomplishments for documentaries during the 20th century.

[73] Many commentators, especially ones from the London School of Economics, have claimed in a historical analogy that the Ukraine war is but a Spanish Civil War in that much in the way that the Spanish Civil War foretold the coming Second World War, the Ukraine war foretells the coming Third World War. While many have claimed that the Ukraine war will lead to a third World War, none have sought to construct just such an analogy.

Cocaine (drug) Noun • Vladimir Putin, the President of the Russian Federation elected by more than 87.8 percent of the vote in Russia's last election in 2024 for a new six year term, becoming Russia's longest-serving leader for more than 200 years, famously declared his preference to work with those whose «Нос в кокаине!» than «с умными» in an interview with Димтрий Константинович Киселев for «России 1» and РИА Новости on March 13th, 2024. The reference is in regard to negotiating an end to the Ukraine war.

Putin claimed that intelligent politicians had by that time started to change strategies for relating to Russia, explaining that these people are dangerous because they want to throw «всякие свои хотелки под видом морковки» (i.e., ulterior motives under the guise of proposals for a negotiated settlement).[74] It is therefore to be determined whether the start of serious negotiations for the end of the Ukraine war should start not with a peace proposal but with a mirror, razor or lines of cocaine, is it not?

communal memory () • In his book, Cosmos, Carl Sagan writes of communal memory[75] the following:"When our genes were unable to store all the information necessary for our survival, we slowly invented the needed genes. But then there came a time, perhaps ten thousand years ago, when there arose a need to know more than it was convenient for our brains to hold. And so we learned to store vast quantities of information outside our bodies. We are the only species on the planet, at least as far as we known, that has invented a communal memory that is stored neither in our genes nor in our brains. The place where this memory is kept is called a library.

A book is made from a tree. You give it a single glance, and you hear the voice of a person who may have been dead for a thousand years. Across millennia, the author speaks, quietly and clearly, directly into your head, personally to you. Writing is perhaps the greatest of human inventions, for it binds together people who are citizens of different epochs and who have never known one another. Books break the shackles of time; they are proof that humanity is capable of magic."

Command and Control Economy () • In a press conference on October 15th, 2025 at the Department of the Treasury[76], Treasury Secretary Scott Bessent and U.S. Trade Representative Jamieson Greer chastised China for is "command and control" economy, by which the two meant that China's economy is a planned economy. Bessent stated: "Make no mistake, this is China versus the world. They have put these unacceptable export controls on the entire world. China is a command and control economy and we and our allies will neither be commanded nor controlled. They are a state economy and we're not going to let a group of bureaucrats in Beijing try to manage the global supply chains." Said in the context of a widening struggle over rare earth minerals, critical for the creation of electronics at scale,

---

[74] ["Путин рассказал о предпочтении работать с теми, у кого «нос в кокаине»," Газета.ру, 13 марта 2024].

[75] It is more appropriate following the development of Artificial Intelligence from the information mankind has produced over more than three millenia with books, publications or paper to call AI "communal intelligence" than "artificial," since artificial intelligence is wholly reliant on mankind's "communal memory" for every single aspect of its current manifestation, no matter the domain. The idea of a communal intelligence should serve to inform its aim with the communal good.

[76] Is there a basis in the Constitution for a Department of the Treasury?

Bessent's comment demonstrates how naive America's bureaucrats truly are about the American economy. While seeking to distinguish America's economy from China's by reference to an allegation about command and control, both engage in acts designed to further America's own planned economy.[77]

Bessent's and Greer's comment on the Chinese economy is less about China's "command and control" economy than about America's ever widening struggle to remain the world's global superpower on the Grand Chessboard in Eurasia.[78] In the midsts of the Ukraine war, where the United States is no longer able to ensure its continued world dominance through a show of force or the deployment of a Ukrainian proxy force against Russia, the widening struggle to control Eurasia is manifesting itself in multiple different forms. While, on the one hand, the Ukraine war is a war, the direct confrontation of Ukraine with Russia or vice versa is, but one of its manifestations. The struggle to secure, on the other hand, trade routes such as varied forms of the Baghdadbahn, important for causing World War I, is an altogether different manifestation; it is neither the first nor the last. In terms of the struggle for raw materials, a direct form is Bessent's and Greer's press conference. The less direct form, however, is the struggle over the future of private central banking. The United States, mired in an irretrievably, exponentially rising, unpayable Federal debt, has exhausted the concept of private central banking, the result of a long history of struggle within the Federal government spanning the entirety of its 250 years of existence from Thomas Jefferson to Abraham Lincoln.[79] Should the United States be unable to secure access to, control over, or exploitation of raw materials, rare earth minerals, or precious metals equivalent to the amount of its Federal debt, the advocates for private central banking such as the Federal government's members of the Socialist Equality Party or others supporting the continuation of the current unsustainable American banking practices, of which the IMF, the World Bank or the International Bank of Settlements are merely appendages rather than the main body politic, the United States will have provided the world with the most profound refutation of private central banking in the history of mankind, for neither Russia[80] nor China, practice private central banking. The struggle over Eurasia, less a struggle over whether a leading nation sets the economy in motion according to a plan, is a struggle over banking. Preserving the role of private central banking, perhaps for the last time possible in the Western tradition, is not only at stake but is the most profound turning point in contemporary geopolitics.[81] With the fate of private central banking history may well decide the fate of human freedom.[82]

---

[77] Professor John Kenneth Galbraith, the Paul M Warburg Professor of Economics at Harvard University in 1966, provided a series of six lectures to the BBC entitled, The New Industrial State. The author of 'The Affluent Society', Galbraith's Reith Lectures explore the economics of production. In his lecture entitled, 'The Role of the State', the fourth lecture in the six part series, Galbraith explains how the modern America state relates to large corporations. He argues that the state has joined private industry, warning against the danger America's involvement in heavy industry presents. In the opening sentence of his lecture, Galbraith says: "I have undertaken to show that in the modern industrial [American] society, or that part of which is compose the large corporations, is in all essentials a planned economy. By that I mean the production decision are taken not in response to consumer demand, as expressed in the market but by producers. The ultimate influence is authority." Made less than 60 years ago, Galbraith's remark is as true today as in 1966, except perhaps with respect to authority. In the United States, the authority to command the controlled American economy through planning has only strengthened in the hands of America's ruling elite. Reading from Galbraith in 1966 to "A Short History of Financial Euphoria," Galbraith's shortcomings, however, become evident. Galbraith's inability to tap the depths of the financial parasitism that characterized the series of mergers and acquisitions, primarily in five waves, demonstrates that even the most clever economic thought may have weaknesses. The financial parasitism that followed most of the 1960s to the present stage of capitalism can hardly be described as euphoria. Explained in his monumental study, Alfred Chandler, Jr.'s Scale and Scope: The Dynamics of Industrial Capitalism (Cambridge, Mass.: Harvard University Press, 1990) described five waves of mergers and acquisitions. The first two waves of merger and acquisitions gave rise to the American corporations for which Galbraith's analysis, no less penetrating at the time than Chandler's now, on planning amongst these corporations. The first two waves took place from 1898 to 1904 and 1916 and 1929; these merges provided for the rise of American corporations to a position of global dominance. In the period of time where Galbraith's analysis is focused, the third wave (1965 to 1969), American corporations shifted away from a pursuit of global dominance towards a response to declining profits resulting from the deterioration in the global status of American capitalism but nonetheless underscored how planning amongst these corporations, although reacting to entirely different circumstances, still maintained centralized planning.

[78]

[79] It is important to remember that the conglomeration of private central banks in Europe have equally exhausted the concept with falling rates of natality, which occurs even in Poland, Europe's rising star.

---

[80] Russia's ability to remain a major great power in the world is partially due to its aversion of private central banking. With the The Bolshevisks in Power, the revolutionaries managed to establish power quickly, even though no fewer than fourteen nations attacked the fledgling state in 1918. Although Rabinowitch makes no mention of currency, banking, or debt in his gripping story of the first year of Soviet rule in Russia, the Bolshevik insistence on practicing the Czarist policy of control over the supply of money in the economy played no small part in their ability to extend their rule, however fraught, for many years. In the years following Lenin's death in 1924, Trotsky's struggle with Stalin is hardly ever examined from the point of view of the Soviet monetary policy. Is it that Trotsky's theory of permanent revolution sought to establish a supra-national currency such that two or more countries permanently in a state of revolution consistently fought against the nationalizing interests of a socialism in one country, not the least degradation of which is a dissolution of Soviet power into the hands of private central banking (i.e., in countries such as Poland where private central banking has followed the trend of many former Soviet commonwealth countries after the dissolution of the Soviet Union in 1991)? Poland is a paragon. The fate of Trotsky's reminiscience on the country played an important role in his famous Results and Perspectives, the likes of which played out throughout the Soviet Union's history, first of all with the fateful consequences of Stalin's failed leadership during the civil war, if not with singular importance during World War II in the aftermath of the Molotov-Rippentroff pact, then certainly after, if not following, the collapse. The study of Soviet banking, hardly ever discussed in the litature, is so rife with politicized conspiracy that little useful information has actually emerged from financial Sovietology, despite the obvious imperative for certainy over the implications money had on centralized planning throughout the Soviet economy.

[81] After the repudiation of the monetary policy Lincoln's greenbacks ushered into existence, a depression enveloped the Reconstruction. Assassinated by agents of international private central banking, otherwise known as "money changers", Lincoln's greenbacks, the issuance of currency without the accrual of Federal debt, had represented nothing short of a profound revolution in American history on a level far higher than the mere emancipation of the slaves. The emancipation of the slaves paled in comparison to the persistent role private central banking has played in American history. It terminated the ability of private central bankers to strangle America with debt. In the bullet to Lincoln's head, Booth ended not only Lincoln's life but more importantly the monetary policy his greenbacks represented. In a study of depression during Reconstruction, the Reports of the Silver Commission of 1876 (a reprint of Senate Report No. 703 from the 44th Congress), the authors linkened the situation America faced to that of the Roman Empire's transition from the era of Christendom to that of the Dark Ages. "At the Christian era the metallic money of the Roman Empire amounted to 1,800,000,000 dollars. By the end of the Fifteenth century it had shrunk to less than 200,000,000 dollars.... History records no other such disastrous transition as that from the Roman Empire to the Dark Ages." The U.S.'s current transition, the geopolitics of which are exacerbating daily, is on record to be a more disastrous transition than Rome's fall into the Dark Ages.

[82] It is alleged that two economists, Reinhart and Rogoff, who studied not the wealth of nations but their indebtedness, contrived of a scheme by which to rate the viability of repayment or the maturation of insolvency. Designed primarily to justify the imposition of austerity, "Growth in a Time of Debt" has surprisingly little to do with an explanation of America's own Federal debt. The conclusions, neither applicable to America, explain specific but not general phenomena related to nation states without an economy of power. The United States defies both of the conclusions, since America's gross external debt has almost no impact on the annual growth of GDP; when the Federal debt's ratio to GDP represented 60 per cent, annual growth fell by no per cent, or, at least any fall in the percentage of growth does not relate back to the Federal debt in any meaningful way; when the Federal debt's ratio to GDP represented 90 per cent, annual growth fell by no per cent, or, at least any fall in the percentage of growth does not relate back to the Federal debt in any meaningful way; America's Federal debt has surprisingly little to no impact

Blaise Compaoré () • A treacherous, traitorous, backstabbing man, the évolué, Blaise Compaoré[83] murdered Thomas Sankara on October 15, 1987, the fortieth anniversary of which coincides with the fifth anniversary of the Ukraine war.

Construction Site () • Described by the Wall Street Journal as "the world's largest open air construction site," Ukraine epitomizes Lenin's Chapter 5 and 6 division.

conquest of space () • In 2025, the United States finally and definitively embarked upon the conquest of space. [84]

transgressions () • A study of law reveals that the decision to separate crimes so that a misdemeanor is a lesser offense than a felony is obsolete. A higher level of crime, deduced from years of dealing with multiple justice systems, has given rise to what may only be referred to as a transgression, a crime so horrible that not only its commission requires a higher level of scrutiny for its proof upon evidence but its consequence fall outside the traditional scope of remedy. The traditional scope of remedy is often a fine, incarceration or a period of supervision. The traditional scope of remedy, however, falls short for transgression. The idea of transgression is already delineated in criminology. These cases require what may be described as atonement. Atonement ought to be a remedy available for horrible criminals to demonstrate that after a period of time he or she has atoned for the transgression. In the majority of States' Departments of Corrections there is a group of crimes for which the State does not permit a convict to receive so-called earned credit, parole, or commutation.

These are generally the following crimes: First degree murder, Second degree murder, Manslaughter in the first degree, Poisoning with intent to kill, Assault with intent to kill, Conjoint robbery, Robbery with a dangerous weapon, First degree robbery, First degree rape, First degree arson, First degree burglary, Bombing, Abuse, neglect, exploitation or sexual abuse against a child, Forcible sodomy, Child pornography or aggravated child pornography, Child prostitution, Lewd molestation of a child, Abuse of a vulnerable adult, Aggravated trafficking in illegal drugs Human trafficking. These crimes are gen-

---

on annual growth. The literature in economics has not established anything but a correlation to specific phenomena primarily for lack of distinction. America's economy is an economy of power. It is unlike the economy of the vast majority of nation-states in the globalized world economy. It thus no wonder that the Silver Commission of 1876 compared the United States to the Holy Roman Empire, for no economy but that one compares. Although Martin Wolff's claim that the combined GDP of the leading BRICS' nations demonstrate a net annual growth higher than the U.S., merely on account of the principle of unity the claim provides for no comparison. The leading BRICS nations do not or have not formed a whole like the whole to which the economies of the contiginous United States form. GDPs combine in nothing but number for nation-states.

[83] A term worst than perhaps an Uncle Tom is a Blaise Compaoré. Those who assist the West with the colonization of Africa, advance imperialism over workers, or pursue the interests of global hegemony on behalf of a ruling elite are Blaise Compaoré. Michael Elliott Langley, the sixth commander of the United States (US) Africa Command (AFRICOM), the first black four-star general in the United States Marine Corps, who received his promotion to that position on August 6, 2022, publicly criticized Ibrahim Traoré during a session with the Senate Armed Services Committee on April 3rd, 2025. He accused Traoré of exploiting Burkina Faso's gold reserves, the result of a policy of nationalization, "to project his junta." Langley did not mention that the Obamas smiled in a photograph with Blaise Compaoré, who refused to nationalize but nonetheless exploited Burkina Faso's gold reserves for nearly three decades after he murdered his best friend in a bloody coup d'état.

[84] "Technical civilization," writes the great Rabbi Heschel in his famous book, The Sabbath (1951), "is man's conquest of space. It is a triumph frequently achieved by sacrificing an essential ingredient of existence, namely, time. In technical civilization, we expend time to gain space. To enhance our power in the world of space is our main objective. Yet to have more does not mean to be more. The power we attain in the world of space terminates abruptly in at the borderline of time."

erally what may be called or, at least in terms of the progression of human law, transgressions. Arson, which one of the tools that America's ruling elite utilizes to engage in massive insurance fraud, ought to be a crime whose evaluation relates to atonement. A person who commits arson with no fatalities, for instance, ought not be sentenced for a period longer than is required to atone. Atonement ought to be a demonstration of the belief that as a member of a country's ruling elite with a specific duty to uphold the State's laws a person may not violate those laws to commit an act of corruption in furtherance of a financially beneficial scheme, no matter what the circumstances because corruption results not only in damage to a neighborhood, community or society but undermines the legitimacy of the Country's laws against arson. Circumstances, for instance, may include an agent's affiliation with an agency whose communication with an insurance company allows that agency to commit arson secretly; despite these circumstances, any person thus involved in arson ought to be convicted but to no more time than is required for the person to atone. The vast majority of America's police State bureaucrats commit transgression. Should America collapse, these agents should be convicted of the transgressions they committed to a period of time not longer than required for atonement. Americans are a merciful people but American mercy must be introduced in such a way as to allow for its introduction to proceed with recent developments in law.

To the list of transgression there must be added crimes related to the commission of politically motivated criminal activity. Any person employed by the government, agent or otherwise, who engages in an act designed by its commission to be a politically motivated criminal act such as a decision to interfere with a person or persons enjoying basic, civil, human or Constitutional rights ought to be subject to a transgressional indictment. An example is an election. Any person employed by the government, agent or otherwise, who engages in an act designed by its commission to be such a politically motivated criminal act as a decision to interfere with an election or a person or persons enjoying a basic, civil, human or Constitutional right to elect ought to be subject to a transgressional indictment. The corruption in America thus gives rise to a completely new category of criminal activity for which members of the American ruling elite, who failed to uphold his or her commitment to the sanctity of an elected or appointed office of government, must stand to answer for a transgression.

"a cruel war against human nature" () • The majority of America's problems derive primarily from the suppression of Thomas Jefferson's thought. In the Declaration of Independence, Thomas Jefferson described slavery as "a cruel war against human nature" in an early draft but the framers of the U.S. Constitution, especially individuals like Alexander Hamilton, an illegitimate immigrant, a mushroom gentleman, the bastard brat of a Scottish peddler, a Monarchist, an anti-American corruptionist, who would charter the nation's first private central bank in the Congress of the Confederation on May 26, 1781 with its opening on January 7th, 1782 in Philadelphia, Pennsylvania,[85] suppressed his belief, order Jefferson to remove the provision so that American settlers could continue to buy, sell, own, or exploit slaves.[86]

---

[85] The reason so many Americans like Hamilton is not so much his penchant for private central banking but corruption. Hamilton's secret speculation with James Reynolds on bonds he created as U.S. Treasury Secretary coalesced with his illicit affair with Reynolds' wife, a modern day Texas swingger's celebration: corruption and debauchery. Hamilton's confession, an incredible admission, exlaims how Reynolds' wife's seductiveness assumed so many different forms they were almost endless. Who could ever write such a thing about another's man wife after a publicly denounced affair? Hamilton is thus elevated privately in American politics for his thoroughly debased political depravity.

In his abolition draft of the Declaration of Independence, Thomas Jefferson wrote: ”he has waged cruel war against human nature itself, violating it’s most sacred rights of life liberty in the persons of a distant people who never offended him, captivating carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither. this piratical warfare, the opprobrium of infidel powers, is the warfare of the CHRISTIAN king of Great Britain. determined to keep open a market where MEN should be bought sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or to restrain this execrable commerce: and that this assemblage of horrors might want no fact of distinguished die, he is now exciting those very people to rise in arms among us, and to purchase that liberty of which he has deprived them, murdering the people upon whom he also obtruded them; thus paying off former crimes committed against the liberties of one people, with crimes which he urges them to commit against the lives of another.” Jefferson’s denounciation of the Christian king of Great Britain with infidel powers for violating not only inalienable but sacred rights to life or liberty advances Thomas Jefferson’s thought well past that of the founding fathers.[87]

Cyberdyne Systems () • Cyberdyne Systems, the subsidiary responsible for Skynet in the Terminator series of Hollywood movies beginning in the 1980s with star Arnold Schwarzenegger, is a fictitious defense contractor in the United States responsible for propagandizing the unscientific hypothesis condemning mankind to oblivion for applying Artificial Intelligence to war.

D

Dalio, Ray () • Ray Dalio’s books are designed to conceal the role money, banking, and finance play in the U.S. economy. In How Countries Go Broke, The Big Cycle, Dalio relies on an equation with five variables to explain Big Debt Cycles; these are the following: 1) Big Debt Cycles influence and are affected by largely coinciding 2) big cycles of political and social harmony and conflict within countries that both are affected by and affect 3) big cycles of geopolitical harmony[88] and conflict between countries. These cycles in turn are affected by both 4) big acts of nature (droughts, floods, pandemics, etc.), and 5) developments of big new technologies. The formula doesn't add up at all. None of these touch on a few of the painstakingly detailed histories at the heart of the organic processes leading to a situation like income tax. In the U.S. more than 75 per cent of every dollar the Internal Revenue Service collects from individual workers is transferred to the Federal government for payment on the interest it owes to private central bankers for loans on currency it could issue on its own. Dalio makes no mention of the 16th Amendment. Dalio cannot support his idea of a "Big Debt Cycle" with an antecedent period of time in history primarily because so-called "Big Debt Cycles" do not exist; the U.S. Federal debt is not the result of a "Big Debt Cycle" but a profoundly complex historical process bound up with its money, gold, five periods of mergers and acquisitions, geopolitics, and history. It is by all accounts entirely unique to America.

---

[86] The 1619 project, whose entire history of debate is a result of a deep-state conspiracy within academia, deliberately and intentionally avoided Thomas Jefferson’s abolition draft of the Declaration of Independence for free that drawing too much attention to Thomas Jefferson, let alone his revolutionary Declaration of Independence, would undermine the seditious project Hannah Nicole Jones led to subvert the origins of the American revolution for independence. The idea that the suppression of Thomas Jefferson’s thought might be a cause for the continuation of slavery is untenable for these scholars, since the aim of the 1619 project is not historical truth but the desire to provide a layer of the African-American petit-bougeosie with a argument for reverse discrimination, reparations, or privilege above whites on account of the founding father’s racialist motivations. The inversion of the idea that suppression of Thomas Jefferson’s ideas is responsible for America’s problems, however, is a far worse proposition, since not only does the claim obliterate the racialist narrative; it opens the door to a more far-reaching concept of inalienable rights, equality, life, liberty or the pursuit of property (whose meaning Jefferson envisioned with his repetition of John Locke’s wors from the Two Treatises on Government.

[87] [The Papers of Thomas Jefferson. Vol. 1, 1760-1776. Ed. Julian P. Boyd. Princeton: Princeton University Press, 1950, pp 243-247]

[88] The concept of ”geopolitical” harmony is one of the static concepts Dalio employs. The concept is static because not only does Dalio treat a country as a unit (which the political form of nation and state simply cannot accomodate) the idea of harmony presupposes an equality of relations; no two countries on the planet, however, enjoy an equality of relations in any sector of the economy; the relations of one economy to another are a reflection of the contentious forms the

A lot of the analogies Dalio employs to explain component concepts are abstract theoretical ideals. At one point, for instance, he writes: "It's like a Rubik's Cube, in which changing one part of the cube—one driver in the grids shown previously—causes changes to the other parts." Nothing in economy is like a Rubrick's cube because a Rubrick's cube's colors do not brighten or fade over time but factors in the economy are subject to the irretractable law of Heraclitus' river. You never step into the same river twice. The gold you discussed yesterday is not the gold you discuss today or the gold you will discuss tomorrow; the ground is ever shifting so that the stability of a Rubrick's cube is unmistabkly inapplicable to the flux inherent in the economy. The Sixteenth Amendment to the U.S. Constitution, ratified[89] in 1913, for instance, is far in a way different then than now, not because the amendment itself changed; the role, function, or execution of the law, however, has changed significantly; the impact of the money collected by the Sixteenth Amendment's agency, the Internal Revenue Service, an agency within the police State bureaucracy with the power to investigate financial crimes, has changed, just as the money the IRS collects has changed. The dollars in 1913, which could have taken multiple different forms from Morgan silver dollars with three quarters an ounce of silver to Lincoln's original greenbacks, are far in a way different from those often called dollars today, even though the vast majority are nothing more than promissory notes but can be crypto coins. The idea that the factors of the economy like money may be reduced to a single tile on a Rubrick's cube suggests a stability completely incompatible with the reality of economy.

dandelion tank () • A tank with a passive rather than active protection system. Designed to shield stationary or mobile armor from strikes by First Person View (FPV) drones, the PPS consists of a base rod with branches. On the branches are leaves. The branches are thicker than the leaves. The individual PPS resemble the petals on a dandelion. Along with the "turtle," "mangal," or other types of tanks, the dandelion's introduction of modified form of armor fails to take into consideration the basic principle for which the progenitors of

---

varied types of comparative advantages forge on a quarterly basis. These comparative advantages never equalize across the board. The factors in economics are not variables but vectors.

[89] An audit of the ratification indicates that states did not following the Constitutionally mandated process. The Sixteenth Amendment is therefore an illegal conspiracy against Americans. An ineffective agency, the IRS has never held to account the culprits responsible for a yoke designed to extract surplus value a third time. The first is the capitalist's share of suprlus value. The second is inflation. The third is the Sixteenth Amendment.

armored attacks exploited for the creation of tanks: maneuver. To the extent that these types of armor hinder rather than help facilitate the realization of this principle, they are essentially ex hypothesi. While the "mangal" is really the only type of modification to enter serial production for many types of armor, the rest like the dandelion quickly became obsolete.

דבר v. ó () • Comparing Jerusalem to Athens is a part of the culture in our Western tradition.

Davis, Sam Known primarily for his penetrating lecture called Collateralizing America, a three part series lasting roughly thirty minutes, Sam Davis is one of the most peculiar skeptical Christian mystics in the history of post-World War II America. There is no preacher like him; no preacher has ever delivered a sermon like his on America. In his sermon, Sam Davis presents a critique of the United States unparalleled by contemporary Christians insomuch as he is not afraid to speak his mind about America; he is not a gnat, a fly on the wall, or a cicada; he is not a man with mere interpretations but a man with an opinion articulated from within the framework of his belief system. Behold a critical thinker.

In the vast majority of cases, Christians unlike Sam Davis are fanatically loyal to the status quo ante in the United States without any of the conscious sense of morality Jesus Christ[90] himself preached against empires.

If you compare Sam Davis to many of the tele-evangelists like Joel Osteen or to the white, rich privileged publicist Christians like Craig Groeschel[91], the disparity is so shocking that anyone with a sense of wit to himself or herself cannot help but be so shocked as to entertain momentarily the well-founded suspicion that Sam Davis may not be a skeptical Christian mystic at all but an anarchist anti-Christ.

Joel Osteen's vision of America is roses, smiles, or money; he is filthy rich; he wears a black suit; he praises the Lord like a man whose never had to drink from a glass jar or sleep with an extra blanket for lack of electricity but Sam Davis' view of America is history, dates, facts with a discussion of American debt. Why would a Christian like Sam Davis question[92] but not submit to the governing authorities? Unlike Joel Osteen, Sam Davis presents a unified theory of assassination on the assassinated presidents, Abraham Lincoln and John F. Kennedy. Davis claims members of the Federal government assassinated Abraham Lincoln[93] for his relation to America's debt. Davis claims John F. Kennedy was assassinated for his decision to eliminate the basis of a "pledge in reorganization" (i.e., the decision to create a currency backed by a precious metal) after John F. Kennedy signed Executive Order 11110 in law on June 4, 1963.[94] Sam Davis claims that upon birth America's ruling elite enter into a ledger a pledge in the amount of 650,000 dollars guaranteeing an American's debts unto death on a person's Social Security number wherein the Federal government trades on "the souls of men" from Revelation 18:13.

---

[90] It is important to note that far less than being a member of the Jewish community, Jesus Christ was far more a subject in the Roman Republic. In the scenes of the bible, Jesus Christ confronts the inequities in the Roman Republic's rule over Jerusalem, the city of the Holy Temple.

[91] Groeschel's books like the Christian Atheist sell for nothing but their impenetrable superficiality.

[92] Romans 13:9; Exodus 20:13-15,17; Deut. 5:17-19,21

[93] One of the most interesting claims that Sam Davis makes relates to the American civil war. Davis claims that America's civil war was not about slavery or freedom, States' rights or the centrality of the Federal government but money. He cites as evidence the hypocrisy of Northerns such as the governor of Maine. Samuel Cony, who served as the 31st governor of Maine from 1864 to 1867, was an abolitionist but allegedly own slaves. He was thus like Thomas Jefferson, who fathered four children with his 14 year old enslaved African American wife. An abolitionist according to a rejected draft of the Declaration of Independence, Jefferson condemned the King for his support of the practice. Davis claims that Lincoln sought to seize the South's assets to facilitate America's repayment of its debt to France in the Treaty of Alliance from February 6th, 1778. While Davis does not claim that private central bankers upset with Lincoln's greenbacks (i.e., his refusal to pay 36 per cent interest on private loans to the Federal government) are responsible for the assassination, Otto von Bismarck lends credence to Davis' account. Bismarck states: "The division of the United States into federations of equal force was decided long before the Civil War by the high financial powers of Europe. These bankers were afraid that the United States, if they remained as one block, and as one nation, would attain economic and financial independence, which would upset their financial domination over the world." Bismarck contends that Lincoln's death relates to his decision to issue greenbacks. He writes: "The death of Lincoln was a disaster for Christendom. There was no man in the United States great enough to wear his boots... I fear that foreign bankers with their craftiness and tortuous tricks will entirely control the exuberant

G., Debka's editor () • A great Israeli commentator on the Ukraine war, G. whose life is as much an undiscussed secret as the author of the famous white paper on Bitcoin[95], perished allegedly from cancer almost immediately after the beginning of the Ukraine war. G.'s journalism, written almost entirely in Hebrew, presented no parallel in the Middle East, Eurasia, or geopolitics; a מזרחן like none other, G. published incredibly insightful snippets chalked full of information no one could imagine a mainstream America, European, or Western news agency publishing. G. had an encyclopedic knowledge of the countries surrounding Israel, sharing banks with the Meditteranean or the Red Sea, or Iran. G.'s articles spanned nearly more than two decades, shedding light on various aspects of power in the Middle East.

G. published a number of articles, detailing Erdogan's purge of the Turkish military, the sum total of which represent a penentrating collection of insights into the order, magnitude, purpose, processes, consequences, or ramifications, short, mid, or long term, for military purges, especially in Turkey.[96] Armies, militias, officers, intelligence analysts, or soldiers should do well to take up a study of G.'s journalism on Turkish military purges, as military purges after G.'s publications became routine, very widespread, almost elemental to the consolidation of power among ruling elites. Repeated in Syria and China, the military purge is a contemporary political tool for the consolidation of power.[97]

The name of G.'s website, **תיקדבקה**, comes from Israeli intelligence so well before many of the most important

---

riches of America, and use it systematically to corrupt modern civilization. They will not hesitate to plunge the whole of Christendom into wars and chaos in order the earth should become their inheritance." Bismarck's account befits Davis on account of Bismarck's affinity with Christendom. Given Bismarck's access to information on the European continent, his account cannot simply be ignored, as most scholars do. The power of these assertions has profound implications for Karl Marx's analysis of the Civil War. Celebrated among Marxists, Marx's account of the Civil War makes almost no mention of the role of geopolitics, finance or private central banking; in his praise of Lincoln, the greatest emancipator of mankind in history, and the North, Marx has almost nothing to do say about money as related to the Civil War. It misses him completely.

[94] Research into the history of assassinations in America reveals a tension within the Federal government related to Thomas Jefferson's failure to tender an Amendment for a prohibition against Hamiltonian finance. While many different conspiracies have surfaced regarding Kennedy, such as one claiming the Mossad assassinated him over objections to the Dimona nuclear power plant, cannot compete with the chain of assassinations on presidents opposed to Hamiltonian finance.

[95] Bitcoin, a great experiment in the history of decentralized banking, began to meet its demise towards the beginning of the fourth anniversary of the Ukraine war.[TO DO]

[96] תיקדבקה, ספט 1, 2016] , [ההפיכה הצבאית בטורקיה טרם דוכאה. לאן נעלמו 42 מטוסי קרב טורקיים?,תיקדבקה, תיקדבקה, יול 18, 2016]

[97] While G.'s journalism does not breech the subject beyond the depth of coverage detailing Erdogan's Turkish military purge, the historical origins of the contemporary analogues may be related as much to Adolf Hitler's own approach to the military as Joseph Stalin's in 1937. These are the two most famous examples of military purges during the 20th century. Neither World War I nor the Spanish Civil War present a comparable example of a military purge for a conflict of great power. G.'s journalism leaves no clue.

war bloggers began to pick up their phone on Telegram, G.'s journalism set a trend, the influence of whhich reverberates throughout the nomenclature of Russian and Ukrainian war bloggers. Deep State, for instance, is a nod; many others are too.

Democratic Socialists of America () • Completely subordinated to America's police State bureaucracy, the Democratic Socialists of America are under the control of the the Socialist Equality in the United States. The Socialist Equality Party gaslights the innumerable lies that candidates from the DSA vocalize to dupe American voters into voting for nominally "socialists" candidates who have absolutely no intention of implementing any "socialists" policies whatsoever. With its gaslighting, the SEP makes itself appear as though it were the only orthodox Marxist party with the sole voice for truly leading the working class to "socialism" when in all reality the members of the SEP are police State bureaucrats embedded in a "deep state" of conspiracy against workers. The DSA is thus not merely a complete lie but a complete lie designed deliberately to provide a straw man the SEP gaslights.

In any single jurisdiction where a DSA candidate has won a seat for office, no candidate has ever implemented a "socialist" policy. The nominally "socialist" mayor in New York, New York, Zohar Mamdani, for instance, hasn't implemented a "socialist" policy. None of the policies he has implemented can even remotely be related to "socialism" by any measure of theory.

Alexandra Ocasio Cortez, who initiated her career with the DSA ended career with the Democrats but has recently ended her career with the Democrats to initiate a new career with the DSA. AOC thus epitomizes the vacillation in rhetoric. Confused about the best direction in which to mislead the workers, the police State bureaucrats have misled themselves. Confusion about what to do with the chimera abounds. The confused chimera sows ever more confusion. During the fourth anniversary of the Ukraine war, neither the Democrats nor the DSA, neither of which are equivalent political entities capable of comparison, began to know not which way to confuse workers best for the best results for either party.[98]

devaluation of the pound sterling () • In its 1968 annual report published on February 28th, 1969,[99] the Federal Reserve Bank of New York noted that the 'devaluation of the pound sterling on November 18th, 1967 [became] a major shock to the world's financial system' that sounded the death knell for one of the tactics the advocates for US dollar deployed in the war against gold. The 60th anniversary of the devaluation of the pound sterling on November 18th,

---

[98] Newsweek, for instance, claims in an article on August 8th, 2026 under the title, "Democratic socialists compared to progressives: List of elected DSA members," the following: "Abdul El-Sayed has said he's not a democratic socialist, differentiating himself from DSA members who won recent races." The article features a picture of Abdul El-Sayed smiling next to a smiling picture of Alexandra Ocasio Cortez.

Mamdani's so-called pied-à-terre tax is an example of an irresolute resolution whose primary function is to make the appearance of "socialism" without the implementation of any policy with absolutely no change. In an article published on August 10th, 2026, Politico announced that a "Judge [blocked] implementation of New York City's pied-à-terre tax," whose legislation various factions of the US ruling elite criticized deliberately as "socialism," when in all reality taxed real estate is neither the beginning nor the end of socialism; it is a bourgeois dispute over the allocation of resources for a State facing cyclical budgetary deficits.

[99] In the IMF's own annual report from September 2nd, 1968 , the IMF lamented the fact that the Gold Pool led to the closure of the London gold market on March 15th, 1968. In contrast with the U.S., the IMF, whose governing body is not merely an extension of America's geopolitical order but a separate entity with its own interests, sought to consider the impact the Gold Pool had not only the U.S. dollar but the international gold market. The emphasis on the closure of the London gold market rather than any discussion of the gold exchange standard under Bretton Woods suggests that the IMF pursued an aim altogether different from that of the U.S.

1967 coincides with the fifth anniversary of the Ukrainian war. The devaluation of the pound sterling undermined the US Federal Reserve's ability to leverage the Gold Pool, the cohesion for whose alliance of G7 countries represented displayed major divisions from its founding, against the rising price of gold. The Gold Pool, which sought to lower the price of gold by decreasing demand with increased supplies, represented one of greatest conspiracies yet known to man. Allegedly, the auctions on gold, composed of gold from G7 countries, sought to sell these reserves, as though dwindling reserves would not have the opposite effect on the price of gold. The Gold Pool, however, quickly disintegrated, as economists like Jacques Rueff, French Economist, a noted anti-Keynesian, argued that the sale of gold itself may be benign but the auctions for reserves could not only be detrimental to the purpose the Gold Poll sought to achieve but to the selling nation itself.

Djerba, Tunisia () •

Djibouti () • On August 1st, 2027, the China's People's Liberation Army celebrates not only the ten year anniversary for its first overseas military base in Djibouti but the centenary of its founding. China's base in Djibouti is important for Chinese SIGINT.

Chinese SIGINT is in direct competition with the US, whose role in Africa fell sharply after the fall of Bakhmut-Artemovsk, thereby diminishing US SIGINT in Africa. The fall of Bakhmut-Artemovsk coincided not only with a perception that America's "overwhelming firepower" failed the Ukrainians but with upheaval in the SAHEL region. America lost a critical base for US SIGNIT in Niger after a military junta installed a new dictator in the country. China's strategy in Africa for Chinese SIGINT differs markedly, however, from that of the US. China is focused on trade routes such as the ones passing through the Gulf of Aden or the Bab el-Mandeb Strait (for which Djibouti is an ideal location). US SIGINT appears to be engaged in blanket surveillance of the African continent without a particular focus on trade, raw materials, or sources of value in Africa.

DeepState () • Ukraine's DeepState represents one of the fascinating moments, if not elements, in the advent of the Ukraine war. It is an intelligence agency reporting on the war in real-time from the comfort of a remote office with merchandise, reels on Telegram, updates on the situation in the various points of contact, battle lines, or great village contests in Ukraine's Belt of Fortifications.

defeat () • What is defeat? Published in the aftermath of an encircled Pokrovsk's fall on September 12th, 2025, n article from The Economist claims "the root of Mr Putin's problem is he has been unable to defeat Ukraine on the battlefield." Is Ukraine not defeated? The article claims Putin's "third and most ambitious" 2025 summer offensive "has

---

[100] ["Vladimir Putin has no plan for winning in Ukraine," The Economist. November 12th, 2025]

[101] In a critique of Hume's famous contribution to the Enlightenment's debate on causality in the cosmos, Of Miracles, John Earman calls Hume's argument against miracles "an abject failure." While offering a new interpretation of Hume's famous "Of Miracles," which notoriously argues against the possibility of miracles (i.e., in an ontic or epistemic sense), Earman tries to show how Hume's argument is admittedly unoriginal or undeniably meritless where original. By situating Hume's popular argument in the context of the 18th century debate on miracles, Earman tries to show how Hume's inductive inference is naive. Earman's primary argument rests on probability calculus. The issue Hume addresses is, namely, how is belief to be apportioned when uniform experience conflicts with eyewitness testimony? Earman criticizes "the quest for a criterion to clear genuine science from pseudo-science." In his evaluation, "the history of these twin quests" has been a failure. He understands the failure to mean, namely, "whether the assertion merits belief and whether the enterprise is conducive to producing well-founded belief." His solution rejects a "simple litmus test" for a proposal encompassing a "detailed, case-by-case investigation." (2000; pg. 3) Comparing Charles Berlitz's The Bermuda Triangle (1974) to Larry Kusche's The Mystery of the Bermuda Triangle-Solved (1986), Earman calls such investigations often "unrewarding" and

been an abject failure."[100] What is an abject failure?[101] Is Putin's 2025 summer offensive an "abject failure"? Is an "abject failure" a project whose unreached goals are confused or ambiguous? Is Putin's 2025 summer offensive a project whose unreached goals are confused or ambiguous?

It is unclear from the article in the The Economist. It doesn't make sense to talk about a third, if one cannot about a second or first. The article makes no mention of the previous three offensives, when they occurred, how they started or how they ended, which goals the offensives sought to achieve or whether these goals were military objectives, a part of a broader strategy or aligned with a plan for victory in terms military analysts utilize to understand war.

Delta (Title) Software • Seldom mentioned in the media, Delta is a battlefield management system preceding the U.S. Army's phased released of its own Large Language Models for AI. Announced by Col. Jonathan Harvey from the U.S. Army on October 18th, 2025, the "sufficient, joint weapon target pairing Large Language Model (LLM)" is scheduled to run inside of the "kill chain," a model advancing from a simple exercise to a "fully devolved reasoning model." The most likely set of data is based on multiple projects running simultaneously in the field of artillery. One of these relates to completing the updates to NATO's firing tables, military artillery data sheets used for calculating trajectories, for the first time since the Cold War.[102] Another is likely the collocation of manuals on targeting, tactics, techniques or procedures[103] for field artillery in combination with the aforementioned firing tables. In the face of the revolution the U.S. Army's phased release of its own Large Language Models is expected to achieve for combat management systems, Delta is now a legacy.

In the first year of the Ukraine war, a Russian affiliated hacker by name of «Джокер» managed to gain access to a Ukrainian commander's laptop with Delta on or around November 1st, 2022.[104] Described as a system for controlling Ukrainian troops, the system allegedly contains details about Ukrainian troops. At the time of the Джокер's announcement, Delta sounded like an unparalleled Ukrainian advantage in software development for the technology of warfare. In video footage from the article, however, Delta is an interactive map with real time updates. While the video footage is only one glimpse at the program, an interactive map could be hardly anything more than a 'novelty' by the New Year. A trend quickly emerged. The interactive map became a staple among journalists. The Ukrainian 'milblogger', DeepState, associated with Ukraine's intelligence services, championed updates to the "Map of the war in Ukraine," gaining recognition among the world's largest media companies. Military Summary, associated with Russia, is the first channel in the history of warfare to offer daily updates on the frontlines from the beginning of the Ukraine war. These 'mappers' overthrew the interactive maps with news, transforming war coverage forever.

denomination for contracts () • The United States has the power to determine the currency of denomination for contracts. While Milton Friedman and Anna Schwartz's encyclopedia A Monetary History of the United States, 1867-1960 mentions the nul-

---

"downright tedious." Ultimately, Earman adjudicates Hume's argument to be an "abject failure" for its unreached ambiguous and confused goals.

[102] ["NATO to make fresh push for common arms standards," Reuters October 16th, 2024]

[103] [https://www.cia.gov/readingroom/docs/CIA-RDP07S00452R000300820008-6.pdf]

[104] ["Безсонов заявил, что хакер из ДНР взломал систему управления войсками ВСУ DELTA," *Известия*, 1 ноября 2022], ["Хакер Джокер рассказал подробности о взломе системы управления войсками ВСУ," *Известия*, 1 ноября 2022]

lification of gold clauses in pre-FDR era contracts only in passing, Allan Meltzer's magnificent A History of the Federal Reserve yield a similar result. A 800-page oeuvre, Meltzer covers FDR's Executive Order No. 6102. If the United States has the power to determine the denomination of currency in contracts, the United States, ipso facto, has the power to issue the currency for those contracts.

The Department of Defense (Title) Phrase • In recognition of the role warfare plays in policy during the Ukraine war, the Trump[105] administration reversed years of intellectually debased stagnation in the U.S. Armed Forces' bureaucracy with the elimination of the Department of Defense for the return of the Department of War.

DEW () • It is plausible within the broad spectrum of the "Havana Syndrome"[106] to suppose that the Federal government might employ weapons or devices designed to cause sleep deprivation secretly against political dissidents. The term political dissident is any person who shares knowledge of the Federal government's secrets, legal or illegal, in any media. The Federal government is so corrupt now that the widened definition of a political dissident is partially responsible for the Federal government's massive expansion into an untold number of police State agencies such as the FBI, CIA (whose violation of the 1947 Nation Security Act is as much established as a practice as its refusal to disclose its budget)[107], NSA, DHS, to name only a few of the well known ones.

1) If the Federal government can accuse other countries of deploying "directed radio frequency energy" , then there is no reason to believe the U.S. does not do the same thing. 2) In all reality, the Federal government sponsors the development of "directed radio frequency energy" weapons or those like it specifically for targeting what may be broadly described as "political dissidents" (i.e., such as 'protesters' or 'rioters') and this is already well documented in the corporate controlled media and in the defense, police, and governance sector. 2a) CBS, one of America's most heavily vetted corporate news media agencies, published an article called "The Pentagon's Ray Gun"[108]. 2b) DARPA is developing such weapons[109] where the Pentagon's identified use for the weapon against "protesters" may be extended broadly within the category of government criticism to journalists. 2c) The US Navy specializes in the development of directed energy weapons with high power microwaves[110] 2d) The

---

[105] The idea that Trump is against international organizations and is somehow an iconoclast waging a war against the swamp is belied by his overwhelming support for private central banking and his undying loyalty to preserving the status quo in Federal government.

[106] 60 Minutes, one of the major relays for dispatching messages in the United States, published four separate episodes on the Havana Syndrome. ["Havana Syndrome: Pentagon," New York Times September 15th, 2021], ["Source: Havan Syndrome investigation is a "massive CIA cover-up," 60 Minutes. March 8th, 2026]

[107] Antonin Scalia, a conservative with full faith and allegiance to the conspiracy to deprive American citizens of life, liberty, and the pursuit of happiness through the mass manipulation of American public opinion, issued a rare condemnation of the Central Intelligence Agency in his call for an audit of the agency pursuant to Article 1, Section 9, Clause 7 of the U.S. Constitution.

Just like so many of Washington's politicians, Washington's agencies are above the law. The Central Intelligence Agency is above American law, operating freely without Congressional oversight (i.e, to the extent that even actual Congressional oversight is no more than pro forma now) with no accountability for their actions in complete violation of the National Security Act of 1947. The CIA does not even answer the President of the United States. Just like the FBI, the CIA operates freely, as one of the many Statelets America's uncontrolable addiction to Federal debt proliferate seemingly without end.

[108] (i.e., https://www.cbsnews.com/news/the-pentagons-ray-gun/)

[109] (i.e., https://www.darpa.mil/research/programs/waveform-agile-radio-frequency-directed-energy)

[110] https://www.onr.navy.mil/organization/departments/code-35/division-353/directed-energy-weapons-high-power-microwaves

Government Office of Accountability (GAO) published an article celebrating "Directed Energy Weapons" (i.e., https://www.gao.gov/products/gao-23-106717). If the Pentagon, DARPA, the US Navy and the Government Office of Accountability is developing or tracking the development of directed energy weapons for "riots," "angry protestors," "control an angry crowd," then there is no reason to believe directed energy weapons for subjecting people to sleep deprivation is implausible.

Given the disrespect America's police State agencies (i.e., the secret Federal police for politics) have for Americans, Americans must take strides to whistleblow, expose, leak, or release information related to defenses to the "Pentagon's Ray [Guns]", since these weapons are already on the record for their deployment against the population for political purposes[111]. Described thus by America's own Federal agencies, they no longer fall under the protection of the Espionage Act of 1917.[112]

Journalists, who are dedicated to First Amendment activity, may source multiple forms of aegis from DEWs from the environment. Anything that emits infrared waves or generate heat through electromagnetic radiation can potentially disrupt, disable, or prevent a malicious, anti-Constitutional, illegal, corrupt, worthless, weak, petty, passive aggressive agent of the State from obtaining the results for which the Federal government, mired in debt, has sought to wield for defense against its irredeemable failure to manage the country successfully, legally, or Constitutionally. These devices are available in the form of home appliances such as coil heaters. Heavy metals such as lead are also a great way to stop DEWs. Although lead is available for purchase online, journalists can easily source lead from tire repair shops, if need be. Salt water barriers, especially if subject to vibrations, can disrupt the infrared waves, dim their effectiveness, or shorten their range.

Djibo () • Djibo, the capital in a triangle within the Sahel region, is the capital of the largest concentration of terrorists on earth. Within Burkina Faso but bordering Mali on the north-west as well as Niger on the north-east, Djibo is the center for Jama'a Nusrat ul-Islam wa al-Muslimin (JNIM).

domesticated scientists () • A trend arising from the domestication of a number of technologies is the rise of domesticated scientists en masse. These technologies combine multiple things at once. The phone (equivalent to a hand held super computer in so much as the size of a phone matches or is more than the size of NVIDIA's Jetson Orin Nano Super computer), for instance, combines the videocamera, video editing, video publishing with Wi-Fi enabled Internet communications. The 3D printer is a manifestation of expanded mental mapping, allowing a person to manifest his or her vision of a specific type of innovation with plastic. The CNC machines are just like the 3D printers but for metals. The development of Amazon-style shipping (where massive amounts of consumer electronics are available almost instaneously from large, robitc controlled, multi-storied warehouses) enables a person to source the combination of multiple different types of microelectronics such as a beeper, a GPS tracking device, a motor, a battery sources for lithium ion batteries, Wi-Fi, Bluetooth, or a camera so that these may be instantly embedded into an innovation for electronic functionality. The digital transformation of information (such as advances in OCR) provides people who are interest in the creation of a solution to a problem instaneous access to the history of decision making for the particular field in which his or her invention may lie. The ability to study a specialization online is a key feature; an inventor does not have to wait, pay, or coordinate the development of his or her specialized knowledge through an intermediary like admissions to ensure he or she is able to develop the area of his innovation he or she requires. Whereas in previous eras the gatekeepers of knowledge locked the doors on the masses with fees, admissions, or other types of control mechanisms, the floodgates to knowledge are now open. The last but not least is the rise of AI. While AI experts focus almost exclusively on the features AI does not or cannot ever have, the features AI does have or can develop more fully or implement with greater impact are already quietly at work for innovators. AI has drastically increased search. Whereas search before the rise of AI merely grasped for words, search now operates on the conceptual, categorical, or essential level together with minutiae to ensure the discovery of an object of information. Search is now searching for the meaning of the query rather than the query's words.AI's ability to order, organize, or otherwise systemize information is leading search to faster, more relevant, more precise discoveries. These technologies enable human beings to shift the focus of their innovations away from the material, construction, or knowledge towards the experiments required to ensure their inventions perform the function they envision.

---

[111] (i.e., "The Pentagon's Ray Gun" (i.e., https://www.cbsnews.com/news/the-pentagons-ray-gun/; https://www.cbsnews.com/news/after-120m-pentagons-ray-gun-languishes/))

[112] The Espionage Act of 1918 is nearly equivalent to the Alien and Sedition Acts of 1798 that Thomas Jefferson fought to outlaw. Jefferson's successful obliteration of the law is instructive.

In that regard, the key feature of a domesticated scientists is the way they emulate Benjamin Franklin's domestic experiments. The domesticated scientists advance through metacognitive erroneous trials from elementary to advanced innovations singularly from a home workshop. A second key feature is self-documentation. These domesticated scientists film the progression from elementary erroneous trials to advanced inventions with the phone.

These features point to the rise of the domesticated scientist en masse. The human ability to self-document the emendation of an erroneous trial from elementary to advanced innovation in major areas of science like aerodynamics or robotic prostheses singularly from a personal laboratory with parts produced by simple plastic on 3D printing machines or metals from CNC machines is a major transformation in the evolution of human living. These domesticated scientists are the first beginnings in the quantum leap that Artificial Intelligence inspires. The lifestyle is a popular lifestyle with hundreds of thousands of people practicing the lifestyle daily. The fact that the transformation has become apparent during the third anniversary of the Ukraine war is indication of just how quickly history has accelerated.[113]

Donbas () • Although hardly ever described in terms of its relation to the Eurasian plateau, the Donbas represents the lip on the face of the Pontic steppes.

E

Egoists in Cyberspace () • In a rare announcement, Russian President Vladimir Putin announced during the third anniversary of the

---

[113] .In the years leading up to the beginning of the quantum leap, magazines liked WIRED, Popular Science, or popular scientific journals, magazines, or weeklies never featured the domesticated scientist or his or her inventions.

[114] ["Путин заявил о мире будущего без одиночек и эгоистов в киберпространстве эгоистов в киберпространстве," 12 сен 2025.]

Ukraine war a world without ”loneliness and egoists in cyberspace.”[114]

Egon von Greyerz () • A humble, shrewd, clairvoyant vibrant little fellow with a slight hunchback, Egon von Greyerz is one of the first in the Western world to pronounce the death of the fiat currencies for the 21st century. His soft-spoken, almost slow, ambulatory voice delivers strikingly clear analogies. A collector of art, the old man points to a picture on his wall. On the wall on several cars, each of which is entitled with an European country's name, drive off a cliff straight into oblivion.

Egon celebrated his wedding with a toast of wine to the low price of gold in the early ninties when an ounce of gold sold for no more than three hundred dollars. At that time the vibrant little fellow, an enthusiast for history, began to collect gold, storing his gold bars in a large vault in Switzerland.

Eisenstein () • During many of the Ukraine war's anniversaries many of the films Sergei Mikhailovich Eisenstein (22 January 1898 – 11 February 1948) produced celebrated anniversaries. Strike (1925) and the Battleship Potemkin (1925)[115], two of his earlier films, celebrated their centenary anniversary during the third anniversary of the Ukraine war.

Named the best film of all time in a British journal called Sound and Sight[116] in 1952, the editor claimed that ”[for] senior film-makers, Eisenstein's Potemkin was clearly the greatest revelation, and remains the key-film; here, one feels, the time factor tells—this was the first of the great Russian films to make an outside impact, and it has stayed most strongly in the memory, though one can think of other Russian films, not only by Eisenstein, of greater dimensions.” Based largely on a poll of composed primarily of directors conducted by the committee of the Festival Mondial du Film et des Beaux-Arts de Belgiuqe, the film held its lead in many subsequent polls the British journal conducted.

---

[115] In the film he published in 1905, Lucien Nonguet preceded Eisenstein's own. Called textfrenchLa Révolution en Russie in Pathé Frères, France, Nonguet's film is a classic from the early 20th century. Released just weeks after the historical events, the plot follows the Potemkin's munity. The film is shot in four scenes. The film opens with a shot of a battleship entering a harbour. The next shot covers a commander on the ship brutally executing a sailor, Grigory Vakulinchuk, in an extra-judicial assassination during a mutiny. The third shot is set showing the ship at the quay in Odessa. Vakulinchuk's body is displayed on the quay before a crowd comes to pay their respects with an orthodox priest. The last shot shows the ship in the foreground with an officer against a panorama of Odessa. Just as the officer orders the city to be subject to cannon fire, columns of smoke rise. The officer looks in his spyglass, demonstrating how the film simulates an officer's perspective through a monocular in certain scenes.

[116] In the Sight and Sound's decennial poll, called the Poll of the Greatest Films of All Time, the journal has conducted a decennial poll to determine the greatest films of all time. These polls have occurred every ten years for the past 70 years. Sight and Sound conducted its last poll during the first year but before the first anniversary of the Ukraine war. These polls occur in the issues for 1952, 1962, 1972, 1982, 1992, 2002, 2012, 2022. The next poll will occur on the tenth anniversary of the Ukraine war, 2032.

Since the beginning of the Ukraine war, a number of films covering the war have tried to capture the essence of the historic event but none thus far actually have. Nearly all of the film published on the Ukraine war, whose processes are rooted not only in the disintegration of the U.S.S.R., an outcome for which Leon Trotsky provided a prediction no less than 65 years ahead of time in his famous work, *Преданная революция: Что такое СССР и куда он идет?*, celebrating its ninetieth anniversary during the fourth anniversary of the Ukraine war, but also in America's decline. Any film about the Ukraine war that fails to take into account these twin events not only fails to understand the war but fails to understand the ultimate basis for which the Ukraine war as a proxy war is sought by either side to resolve the problems, societal, political, or economic, bound up with the historical trajectory of the world.

[117] It can be exceedingly difficult to sort through the massive amount of information related to cases like Lina Engel's but the facts are relatively straightforward. Shortly after the Socialist Equality Party began to orchestrate a Federal challenge to the so-called der Verfassungsschutz where the report from 2017 labeled the German section of the SEP als eine von insgesamt drei „linksextremistischen Parteien“ und als „Beobachtungsobjekt“, the SEP began to engage in acts of orchestration in Germany. The der Verfassungsschutz from 2017 empowered Germany's secret

Engel, Lina () • The Socialist Equality Party[117] in Germany, whose members are members of the Central Intelligence Agency, facilitated the malicious prosecution of Lina Engel in Dresden, Germany for ”Linksterrorismus” related to unsubstantiated allegations that she played a role in attacks on groups of so-called neo-Nazis who were more than likely members of Germany’s own secret police. The modern police State bureaucracy, whose transformation in Germany the members of the Socialist Equality Party seek to perfect in NATO Member States in a modified Gladio network, plays with ”extremism” from one end of the political spectrum to the other. With access to the personal lives of politically motivated citizens, the police State bureaucracy, whose conception of privacy is non-existent, is able to nudge a precocious youth like Lina Engel into activity the State can thereafter deem ”terrorismus.” Although Lina likely evoked a German right to a speedy trial, the trial Court deliberately and intentionally delayed, obstructed, or prevented her trial so as to maximimize the time the innocent girl spent languishing in a German detention center. While Lina Engel’s case may ultimately be shrouded in mystery, her case brings into sharp relief the role the SEP plays in exporting the American police State bureaucracy in Europe.

Eisenberg () • Eisenberg is an appellate lawyer from Sacramento, California whose decision to proceed in propria persona in his last case not only resulted in the elimination of one of California’s most corrupt appellate judges but demonstrated to the world over just how corrupt California’s Courts truly are.

Eisenberg wrote a fullproof brief. In his brief, Eisenberg accused Vance Raye, a singularly corrupt judge in the Third District Court of Appeal, from refusing to rule on fully briefed appellate cases to ensure that the appellants could not benefit from the Court’s rulings until their sentences had already been served, even though Vance Raye’s authority to do so is re-

---

police to subject the party to surveillance 24 hours a day, seven days a week. Unintelligent orchestration, the German secret police were already subjecting the non-State employed members of the Socialist Equality Party in Germany to surveillance, since the mostly Central Intelligence Agency members of Germany’s SEP are cross-deputized members of Germany’s domestic secret police. It surfaced a latent conspiracy for public disclosure. Anyone with an imagination can easily envision the manifestation of the police State bureaucracy responsible for Germany’s domestic secret police to enforce the der Verfassungsschutz. It requires the creation of a deployable group of trained special agents with various types of skills, backdoor or hacked access to telephones, computers, Internet, or Internet accounts in coordination with Germany’s local law enforcement. The SEP provides a clue. ”The special police commission Soko Linx, which was founded in November 2019 by the Saxon State Criminal Police Office to combat “left-wing extremism,” as reported in an earlier article, is precisely the “sort of joint venture between Saxon police and the far-right scene” required to implement localized orchestration under the auspices of the SEP’s supervision. The SEP’s supervision is at a high level where the SEP infects the entire movement of the left in Germany so that magazines, periodicals, or newspapers are transformed into levels the party can pull to facilitate orchestration at various levels. It can utilize a petit-bourgeois journal to furnish a take on an entity like Rosa Luxembourg that the SEP subsequently attacks to appear orthodox. In at least one of the articles the SEP describes how the judge presiding over the SEP orchestrated lawsuit against der Verfassungsschutz became its leader, indicating how the lawsuit served to celebrate the SEP’s orchestration; the SEP trained the judge so that the judge could lead the der Verfassungsschutz. [”Verteidigt die Sozialistische Gleichheitspartei gegen den Angriff des Verfassungsschutzes,” WSWS August 15th, 2018], [”Rechtsradikale Netzwerke im Staatsapparat,” WSWS. October 12th, 2019], [”Rechte Terrornetzwerke im Staatsapparat bundesweit vernetzt,” WSWS. April 18th, 2020], [”Sächsische Polizei geht zusammen mit Rechtsextremisten gegen Linke vor,” WSWS. November 2nd, 2021], [”German Federal Court of Justice confirms lenient sentence for NSU accomplice André Eminger,” WSWS. January 5th, 2022], [”German neo-Nazis remain at large after assassination attempt on journalists,” WSWS. October 9th, 2022], [”Germany’s secret service intensifies persecution of war opponents and warns against “Trotskyism”, WSWS. July 31st, 2023], [”Germany: Long prison sentences for attacking Nazis—a political judgement,” WSWS. June 4th, 2023], [”Berlin Administrative Court dismisses Junge Welt lawsuit against secret service surveillance,” July 21st, 2024], [”Berlin judge who ruled against the Sozialistische Gleichheitspartei to head secret service in Brandenburg,” WSWS. June 26th, 2025] stricted by a number of laws. These laws are the U.S. Constitution's own law forbidding a judge from denying a criminal defendant due process of law; others were from California's own Constitution, stating the same or other things such as the amount of time a judge in a fully briefed appellate case has to rule on the merits. Eisenberg provided a list of cases spanning Raye's entire career in the Third District Court of Appeals. These included the names of dozens of criminal defendants whose cases were fully briefed but without an opinion.[118]

Eisenberg's brief is a masterpiece in the history of appellate briefing. While Eisenberg's masterpiece has not resulted in his receipt of awards, Eisenberg is most definitely deserving of those awards. Eisenberg should be a judge on the Supreme Court of California so that fellow judges below or beside him look up to him as a manifestation of Right, Law and Justice.

In California, which is supposed to serve as a model for jurisprudence, the Court system is massive. There are is a Court system for nearly every single one of the 56 counties, incorporated or not, into California; over each of these 56 counties is a system of appellate Courts (whose variety, range, or lack of harmony in opinion is submerged in largest conspiracy of any State's judicial bureaucracy in history with opinion after opinion meaning little to nothing for lack of publication) further divided districts. These District Courts of Appeal, which host an almost innumerable number of judges for lifelong appointments with meaningless specializations in subjects other than law, amount to no fewer than six Districts where the Fourth, being the largest, has three subdivisions (i.e., 1st District is A; 2nd is B; 3rd is C; 4th is D, E, and G; the 5th is F; and the 6th is H) continue to grow almost exponentially at an alarming rate. Over these District Courts of Appeal presides the Supreme Court of California, whose inability to engage in the work for which a supreme Court is designed is not only a well acknowledged fact amongst California appellate lawyers but a mark of the most vile contempt for the uninitiated Californians, whose lives the Supreme Court of California contemptuously wrecks on a weekly, monthly, or yearly basis with garbage opinions (that do not even pretend to harmonize, clarify or settle the law in California). The Supreme Court of California has the largest record of any State for illegible, incoherent, incomprehensible opinions in the history of the United States. The word "California's Courts," however, encompasses much more than the entire edifice of California's Courts but the Judicial Council, which is basically a self-serving institution with no purpose for Californians; alongside the useless Judicial Council is far less useful entity, the Commission on Judicial Performance; last but not least is California'ss State Bar, a manifestation of an aspect of the police State bureaucracy in the form of the bar[119].

---

[118] These criminal defendants' cases like many cases in America were likely rigged by the police State bureaucracy, as the police State bureaucracy has at its disposal a number of tools to utilize to program the selection of a jury pool so that even through selection a criminal defendant may not receive an outcome the police State bureaucracy would not like him or her to receive. The Kalshi company, which is a front company for the deepest agents in the FBI or CIA, have developed algorithms that can analyze with a high degree of predictiability whether or how a person selected for a pool of jurors may rule on the outcome of a case based on factors almost entirely unrelated to his or her criminal behavior. These criteria are based on the principles Nietzsche establishes in his book, The Twilight of the Idols, where he claims that ugly people, for instance, are more likely to be convicted of a crime than the aesthetically pleasing. Berating Socrates, the pugnosed philosopher, as belonging to the lowest orders, Nietzsche exclaims how "Ugliness is frequently enough the sign of a thwarted development, a development retarded by interbreeding. Otherwise it appears as a development in decline. Anthropologists among criminologists tell us the typical criminal is ugly: monstrum fronte, monstrum in animo." Nietzsche is a favorite among the deepest agents of the FBI or CIA because of his elevation of social Darwinism over the repudiation of the loser's morality, allowing these deep agents to delude themselves into thinking that they are somehow moralistically superior to the innocent, unsuspecting, unitiated Americans whose lives as guinea pigs they exploit for individual or social experiments in large, unabetted, unknown money laundering conspiracies. It is likely that prior to the release of Kalshi, deep agents from FBI or CIA ran hundreds of thousands of experiments on pools for juries with similiar, if not identical, cases to program the outcome of a trial. Since the selection of pools for juries is no longer random in these experiements, there is a high likelihood that the majority of the cases where the experiments may have been ran resulted in wrongful convictions.

While California's governor, Gavin Newsom, the Nero of California, a spoiled, heir to Nancy Pelosi's political dynasty, a relative to Tom Siebel's multi-billion dollar family, has watched California burn or slip down the side of mountains or hills in mud slides, has boasted of California's success in terms of its economy, little to nothing has been done to improve the basic standard of living for the people, of which not only the economy but the society, its institutions or their influence on everyday Californians play a role. In terms of California's corrupt legal system, Newsom has done absolutely nothing to address Ray's victims. Newsom has allowed the entire affair to be swept under the rug, as though nothing happened; Newsom, for instance, has not called on the Judicial Council, which handles California's online dockets, to restore Eisenberg's case to the public, allowing the Judicial Council to continue its concealment of Eisenberg's brief. Newsom has not called on the Supreme Court of California to review the ruling it issued in Eisenberg's case. Newsom has done aboslutely nothing to address, let alone remedy, the injustice either Ray or the California Courts have caused; he has made no effort to improve the responsibility the California Courts have to California's residents.

Newsom has not directed California's attorney general to review meritorious submissions to the Office of Attorney General for bills citizens have proposed for improving California's Courts, the scope of judicial power, or its laws; he has been completely silent on a number of bills, the most remarkable of which is a bill to require child custody to become subject to a jury. Newsom, who is supposed to be a champion for civil rights, has insisted on the scope of judicial power continuing to encompass orders on child custody without juries. Although judges prefer juries over bench trials, Newsom has not said a word about the proposed law the former Attorney General Anthony Baccera rejected without a proper legal basis.

---

[119] Nothing in the U.S. Constitution authorizes California or any other Court in the United States to establish a bar. The California State Bar's purpose is not to ensure the standards of practice excel to the highest level but to guarantee that any lawyer who fails to bend his or her knee to the powerful ruling elite controlling the strings behind the scenes of the California State Bar are subject to proceedings for disbarment. It is nothing more or nothing less than a petty police force designed to enforce an order people who should otherwise be free to practice however the law so permits. The requirements, which the bar enforces, are among the most petty requirements in the history of a professional service, especially for active lawyers. A lawyer who fails to obey a judge's order such as to award damages to his or her client is better served in a contempt proceeding initiated by the client through application to the ordering judge than by an external third party agency with an undeniable political agenda such as the California State Bar; the judge presiding over the case can easily grant or deny such an application, allowing the lawyer to benefit from due process, the rules of evidence, or the right to appeal so that the ultimate authority lay in the Supreme Court of California where appeals end up anyway.

The fact that the greatest men in American history never stood to answer before a bar, one of the many different parasites sucking the blood of America's society, law, or politics, is a testament to a State Bar's lack of utiliaty; Abraham Lincoln, the greatest president since the founding fathers, never passed a test to become a "bar" certified lawyer; he never stood to bar; he never had to become subjec to an State Bar in Indiana because no such thing existed. If Abraham Lincoln, doubtlessly so like the many others who came before him, was able to practice the law honestly, competently, or professionally without a bar, no bar is necessary. Its licensing fees are unnecessary; its requirements for courses are unnecessary. It is an entirely unncessary service. Attorney's fees, usually under 10,000 dollars, ought to be a matter for small claims; an attorney who routinely ends up in small claims court for a failure to serve his or her client is thereby easily subjected to a client's background check in the small claims court.

Newsom's governorship is best summarized in the results of California's High Speed Rail Project. Established by votes in a referendum, California's High Speed Rail Project has not laid a single line of track. Californians can travel no where in the state on a high speed rail like the one for which they thought they approved in a referendum.

Newsom is a privileged member of a political dynasty with no political prospective for Californians, let alone Americans. His governorship over California has witnessed the State burn; Paradise, for instance, burned to the ground under his watch, even though California has the resources, money or time to emasticate the forests against fires. California's houses are falling down mounds, hills, or mountains from endless, recurring, geologically predictable landslides. Even in the richest neighborhoods where some of California least useful bureaucrats reside, such as El Dorado Hills, houses are slipping down hills. His refusal to require California's Courts to conform to California's Constitution, to clarify, settle, or harmonize California's appellate opinions, or to allow bills citizens propose to reach the ballot demonstrates that Newsom is no less fit to govern California than the United States.

Newsom's decision to run for president began to circulate widely throughout social media during the second anniversary of the Ukraine war when a mock political debate put him before Florida's governor, Ron DeSantis, a straightforward, translucent, results-driven politician, whose State's high speed rail began to transport Floridans within less than two years. During the third anniversary, Newsom began to deny actively whether he has or hasn't committed to a run for president. In his denials, he has listed various achievements for California such as its status as the fourth largest economy in the world but has never addressed any of the issues facing everyday Californians. What role has Newsom played in a distinction California has carried for decades? California has been a leading economy in the world for years before Newsom's election. The fact that California is the fourth largest economy in the world further underscores the pressing need for resolution to the problems everyday Californians face.

Electricity () •

Ecclesiastes 1:9 () • In the introduction David Ryazanov[120] appends to his compilation of Fredrick Engel's notes on changes in nature, a book bound quite like the ones monks prepared for Aristotle[121], Engel is quoted as espousing a view similar, if not identical, to the one in Ecclesiastes 1:9 when he talks about the regeneration[122] of a degenerated earth the explosion of our star from our galaxy causes.

El Mundo Español () • El Mundo Español (Heath's Modern Language Series, Volume I, II (1932), (1936), (1942)) is a series of textbooks written by female language instructors from Texas in the early 1930s that is unparalleled in the history of Spanish teaching, if not linguistic pedagogy altogether. The motivation for these gems is ”hemispheric solidarity,” a term arising from America’s interest in the Western hemisphere. Setting itself apart is the long list of different approaches the text combines into its two volumes. Some of these things are dialogues, vocabulary, radio programs, news articles on topics such as bananas and coffee or cowboys in Argentina and Chile, illustrations, photocopies of great art such as Diego Rivera’s paintings, maps, or bibliographia. Taken together, these different approaches to language learning form a major breakthrough for contemporary language studies that extended beyond grammar to the culture of the living, speaking inhabitants of America Hispaña. Hardly a contemporary textbook matches El Mundo Español’s width, breadth, or depth.

---

[120] David Ryazanov is one of the greatest men of the 20th century.

[121] The idea that Aristotle wrote books is anachronistic; the idea of a book took millennia to evolve, refine, or focus on what is now before us. Even less so prescient is the idea that Aristotle's great work, The Metaphysics, was a book. His was nothing more than a series of notes monks, the likes of which is lost to history now, compiled together. The name, which has come to signify for all mankind, meant nothing more than the compilation of notes after those on nature. The word in Ancient Greek for ”nature” is the modern word for ”physics.” The word for ”after” in Ancient Greek is ”meta”. The great human endeavor dedicated to the study of being originated less in a term Aristotle coined than in an organizational principle monks applied to the compilation of the Great Philosopher's notes.

[122] Engel's idea is conceptually almost indistinguishable from the ideas espoused in a recent paper entitled, Dark Matter and Gravity Waves from a Dark Big Bang published two days before the first anniversary of the Ukraine war on February 22rd, 2023.

Epstein The American ruling elite orchestrated the release of the Epstein file in successive waves with aspects of frayed dispersion[123] to encourage pointless, fruitless, aimless research into “Dark Secrets Inside of a Bohemian Grove” like those from Alex Jones’ 2000 documentary about the 2,700-acre private camp hidden in Northern California’s ancient redwood forest where admittees to the “Bohemian Club”[124] engage in “satanic” rituals. This type of research, which is designed to draw viewers away from Epstein’s admission of guilt to child sex trafficking during his plea agreement with the now thoroughly discredited Department of Justice towards a spectacle, is a definitive black hole. It does not open eyes to the unfolding reality. It serves to distract from what is really happening.

---

[123] The aspects of frayed dispersion are easily detectable. In any given release the easiest way to detect “frayed dispersion” is by determining whether or not the document reflects directly on Epstein’s confession of guilty in his plea bargin with the Department of Justice for sex trafficking. If it does not reflect directly, then the release is likely either unrelated, a transgression, or a means of distraction. At least one release involving George Walker Bush, the former president and head of the Central Intelligence Agency, for instance, claimed he witnessed a child sacrifice. While it is to be determined whether or not G.W.B. witnessed a child sacrifice or not, investing more time in determining that claim rather than amassing evidence against members of the ruling elite who colluded in acts that reflect directly on Epstein’s confession of guilt is precisely the aim of “frayed dispersion.” The police State bureaucracy disperses a reader’s attention away from the primary claim (i.e., the documents that reflect directly on Epstein’s confession of guilt) in frays. The number of different unrelated claims, transgressions, or means of distraction are frays. By dispersing these frays in an act of “frayed dispersion” the police State bureaucracy is able to set up separate tracks of mental focus unrelated to, transgressing from, or distracted from the documents that reflect directly on Epstein’s confession of guilt. Distinct from “rabbit holes,” for which a few of the frays may actually be, the frays are by design so numerous, so dispersed that even an AI algorithm would have a hard time connecting all of the dots. Should anyone connect all of the dots, there is no guarantee that one fray is anymore truthful than another. Much like research into the police State bureaucracy’s orchestration of the collapsed Twin Towers, the timed release of the Epstein files is designed to confuse, confound, or otherwise dumbfound ordinary people. Readers have to refocus attention to amassing evidence against members of the ruling elite who colluded with Epstein in acts that reflect directly on their own or Epstein’s confession of guilt in his plea bargin with the Department of Justice for sex trafficking. Price Andrew is a perfect example. A witness definitively implicated the prince in Epstein’s confession of guilt.

[124] In an article entitled, “Ideas Have Consequences: The Impact of Law and Economics on American Justice” (Feburary, 2022) researchers have determined the impact retreats such as the Manne Economics Institute for Federal Judges have on opinion in the Federal courts. With a quantitative analysis of the effect on Federal judges, who deviate willy-nilly from the core principles of early law and economics whereever the Federal government requires an exception to maintain the status quo, the researchers demonstrated that participating judges employed the language of economics in their opinions more often, settle law with greater conservatism relating in cases related to economics, ruled more frequently against regulatory agencies, favor laxer enforcement in anti-trust, or impose more/longer criminal sentences without justification, than those who did not attend. The National Bureau of Economic Research’s study of the impact of attendance at brainwashing ceremonies exposes the effects that non-democratic activities have on the judiciary. The Manne Economics Institute, which enjoys a greater right to free speech than ordinary citizens, is equivalent to a preliminary indoctrination for admission into those factions James Madison condemned in Federalist 10 (1787) for uniting and actuating by “some common impulse of passion, or of interest, [adversity] to the rights of other citizens, or to the permanent and aggregate interests of the community.” The black rob is akin to a vow of social chasity from the sins of influence for which there is neither absolution nor atonement but only ostracization.

F

FAB () • See ”glide kits” (i.e., Унифицированный модуль планирования и коррекции (УМПК)).

() • ”If an original historical event represents a tragedy, its replica is merely a farce.” [Lenin. What is to be Done? 1902]

F.E.D.S. () • Founded in New York City in 1999 by Antoine Clark, the title is an acronym, meaning Finally Every Dimension of the Streets. It is a prominent hip-hop, true crime, and urban culture publication with a wealth of insights related to security, a low-profile, or avoiding confrontations with law enforcement. Known for its raw, documentary-style coverage of street life, prison culture, and high-profile criminal cases, F.E.D.S. is one of the American treasures, whose complete collection is essential to an understanding of America on the eve of its demise. Due to the fact that F.E.D.S. Magazine was an independent, underground publication with an irregular quarterly publishing schedule rather than a strict monthly one, FEDS rarely published on time. The magazine, however, managed to publish at least 45 distinct numbered issues, spanning across roughly 10 volumes from its inception in 1999 through the 2010s.

Feynman, Richard () • In his lost lecture entitled, ”The Motions of the Planets Around the Sun,” delivered to freshman and sophomore students at Caltech, Richard Feynman presented a geometric proof for planets traveling in ellipses rather than in perfect circles, reflecting a state of human consciousness reached only after more than 2,000 years of human discovery from Euclid to Isaac Newton in the sciences.

Uncovered from the papers in a dying professor’s office, Robert Leighton, David Goldstein revived the lost lectures, never published during Feynman’s life, in a book called ”Feynman’s Lost Lectures: The Motions of the Planets Around the Sun.”

In much the same way Julien Offray’s publication entitled La L’Homme Machine transformed man into a machine, the combined efforts of the scientists responsible for describing the path a heavenly body takes are responsible for the transformation of the universe into a machine.

Feynman is far more important, however, for his belief in the ability of mankind to undergo profound shifts in consciousness. In terms of the individual, Feynman believed that an ordinary person could become a scientist like himself with study. In an interview he points to himself. He said: ”You asked me, if an ordinary person by studying hard, would get to be able to imagine these things like I imagine. Of course, I was an ordinary person who studied hard. There’s no miracle people. It just happens they got interested in this thing and they learned all this stuff. They’re just people. There’s no talent, a special miracle ability to understand quantum mechanics or a miracle ability to imagine electromagnetic fields that comes without practice and reading and learning and study so if you say you take an ordinary person who’s willing to devote a great deal of time and study and work and thinking and mathematics and time, then I think

---

[125] The operative verb in Feynman’s vocabulary is a distinctly characteristic belief of the Enlightenment Georg Wilhelm Friedrich Hegel established in his Phenomenology of Spirt. Just as the Greeks and Romans believe, Hegel furnishes the human capacity for intelligence less in memory or cognition than in the imagination.

he’s become a scientist.”[125]

Le Fer () • During the third anniversary of the Ukraine war,[126] a scholar by the name of Alfred McCoy[127] delivered an interview on one of the CIA’s long funded means for the spread of disinformation, the so-called Democracy Now! news channel (which has featureed Noam Chomsky for an untold number of interviews. On the interview McCoy claimed that global empires rise by mastering new energy systems, as China continues to do so with renewables. ”China is absolutely dominant in every aspect of this green energy revolution,” says McCoy. McCoy’s claim, however, is complicated by the example of Sumer.[128]

In a four part documentary in French, French scholars explore four ancient civilizations. Called Civilizations, the documentary features les Sumeriens first of all. Il y a 5 000 ans, les Sumériens bâtissaient les premières grandes cités de l’Histoire, inventaient l’écriture, la roue, le contrat, et irriguaient le désert pour le transformer en Eden. Mais cette civilisation brillante, née entre le Tigre et l’Euphrate, a disparu, vaincue par le sel, les invasions et le temps. Découvrez leur héritage, leurs dieux, leurs mythes et les raisons de leur chute.

Towards the end, the documentaire raises the following question: ”Comment t’expliquer la disparition d’une civilisation aussi brillante?” A French scholar from the documentaire attributes les raisons de leur chute to a new discovery: ”Est-ce qu’on peut parler d’un déclin? Dans une certaine mesure, oui, mais peut-être plutôt d’une sclérose.”

He continues, saying: ”Toutes ces grandes découvertes réalisées par les gens de du 4e millénaire, toute le pensée qui se concrétise par des manifestations religieuses ou disons dans le cadre du religieux, toutes ces choses-là évoluent et vu à longue échelle, on s’aperçoit qu’il y a de moins en moins de liberté possible dans l’expression d’un certain nombre de choses. Par exemple, l’art mesopotamien est infiniment plus divers, plus florissant, au 3e millénaire que au premier millénaire. Qu'est-ce qui se passe en la premiere millénaire ? Vers la premiere millénaire, c'est la découverte du fer. La fer est un atout. Le fer est quelque chose de plus efficace que le cuivre et par certains côtés plus facile à travailler même s'il faut une température plus forte à des applications encore plus nombreuse. Donc c'est une amélioration mais l'environment de la Mésopotamie n'est pas en fer et le problème des sources va se poser parce que il faut aller beaucoup plus loin et par conséquent les régions qui ont du mineret de fer vont jouer un rôle beaucoup plus fort que la Mésopotamie."

---

[126] At least one of the attacks Ukraine’s HUR (Main Directorate of Intelligence of the Ministry of Defence of Ukraine) planned during the third anniversary of the Ukraine war focused on the town of Staryi Oskil in the Bilhorod region. Struck on October 6th, 2025, the military objective of the attack focused on an iron ore processing and extraction site in Russia where Russia sources no less than 50 per cent of its iron ore for production, or roughly 40 million tonnes a year. It consisted of two GOKs (i.e., Горно-обогатительный комбинат). The extraction sites operate approximately twenty 300 to 750 tonne quarries for crawler excavators. These machines, incredibly large, slow, cumbersome piefces of equipment, make for extremely easy targets. The hydraulic systems of these machines are enormous; the hydraulic fluid is extremely flammable. If it is catches fire, the entire machine becomes engulfed in unquenchable flames as though hit by Greek fire. The machines are unbelievably expensive; they require shifting resources from Russia’s war machine back to civilian tools; the time to produce such machines can shut down a civilian workshop converted to Russia’s war machine for weeks, if not months. The Ukraine’s attack on the town of Staryi Oskil thus sought to shut down Russia’s ability to source more than 50 per cent of its iron ore.

[127] It is most likely that McCoy derived his theory on energy from an expanded reading of Christopher Dunn’s The Giza Power Plant (2000) where the author attributes the source of Egypt’s great society to the pyramid. Based on the science of harmonic resonance, Dunn claims the pyramids were an acoustic device designed to generate power for the ancient Egyptians. Dunn’s account is an excellent source of information on argumentation. Dunn’s claim, for instance, about the hallow sarcafagos in the pyramid is an example. Dunn explains that the precision with which the Egyptians hallowed the sarcafagos, whose quartz stone could not have sustained direct strikes from a hammer, suggests the use of what is the equivalent to a sophisticated mill or an advanced router, for which there is no trace on earth. While development is uneven, the idea that the hallowed sarcafagos cannot be explained otherwise is no less definitive than the conclusion he reaches about the pyramid. The measurements for the sun are suggestive but the suggestions extend without support. Dunn hypothesis, nonetheless, implies energy is a source of prosperity but the Romans lived for millenia on nothing but water, manpower and the horse.

[128] The example is significant, for Sumer is the cradle of civilization. The documentary, for instance, references the Old Testament. It references Genesis 2: 10-14, Genesis 11: 3-4, and Genesis 11:8. If the French explanation of Sumer’s extinction were not credible, the verses from the Old Testament would have to be explained in an altogether different way, wouldn’t they?

The French scholar thus attributes the cause of Sumer's extinction to the relatively long distance Sumerians travelled from their cities to sources of iron ore. The lack of access to, control over, or exploitation of raw materials, rare earth minerals or precious elements such as uranium, lithium, gold, silver or palladium are responsible for determining whether a civilization prospers or transpires. Applied to China, China's energy production is reliant upon precious elements, rare earths, or raw materials, the majority of which China streamlined to facilitate its ability to construct major energy projects like the Talatan Solar Park. It is thus China's access to, control over, or exploitation of raw materials, minerals, or rare earths that is responsible for its ability to build infrastructure for sources of renewable energy such as the Talatan Solar Park. Hence access to, control over, or exploitation of raw materials is prior to culling, constructing, or exploiting sources of energy. McCoy's claims must therefore be rebased from sources of energy to sources of raw materials.

Finkelstein () • Finkelstein's nonclass analysis of the Israelis, amalgamating Israelis into a single society is intolerable for Marxists. Anyone who attempts to dissociate Israeli workers, Jewish or not, from the working class is inimical to Marxism.

five year plan () • China's fifteenth five year, which the Chinese implemented during the fourth anniversary of the Ukraine war, signaled a profound shift in the significance of centralized planning for history. Whereas prior to the fifteenth five year detractors could have argued against centralized planning, centralized planning has clearly demonstrated its utility, if not for the Chinese than for the whole world. The whole word buys from the world's most centrally planned economy on earth.

Fix und Fax () • Printed in 1966 in German Democratic Republic by Verlag Junge Welt, Fix und Fax chronicles 29 lustige Mäuseabenteuer in vielen bunten Bildern und Versen. These are 1) Wer ist der Täter?, 2) Zwei mutige Detektive, 3) Geheimnisvolle Spuren, 4) Verfolgungsjagd im Kaufhaus, 5) Diebstahl in der Kornkammer, 6) Nächtlicher Zwischenfall, 7) Der Bankraub, 8) Wo ist die Beute?, 9) Der Schnappschuß, 10) Der Erpresserbrief, 11) Tatort Tümpelstraße Nr.3, 12) Halt! Stehenbleiben!, 13) Der Schlaftrunk, 14) Hilfe, Mord!, 15) Zu neuen Abenteuern bereit, 16) April, April!, 17) Der Mai ist gekommen, 18) Schatzgräber, 19) Der Stepellauf, 20) Mittagsrast, 21) Nasses Erwachen, 22) Wer macht mit?, 23) Der geheimnisvolle Funkspruch, 24) Das Geländespiel, 25) Höhlenforscher, 26) Augen auf im Straßenverkehr, 27) Der Sturz in die Tiefe, 28) Die Weihnachtsüberrraschung, 29) Das elektrische Pferd. Each page contains a two by four square in which the Fix und Fax act out their adventures in German.

Article 58 () • Article 58 is the article Stalin codified after he murdered Kirov on December 1st, 1934[129], ten years after Lenin's death, to legitimize his political genocide of the Bolshevik, red, October generation of Russian revolutionaries. The gravedigger of the Russian revolution, Stalin oversaw the illegal conviction of hundreds of thousands, if not millions, of innocent people for no reason other than his profound sense of paranoia about his power within the Bolshevik party.[130]

---

[129] A number of scholarly works demonstrate how the no one other than Stalin could be the culprit.

flywheel () • The Torus flywheel relies on physics to store energy kinetically rather than chemically. [TO DO]

Fritz Fischer () • During the fourth anniversary of the Ukraine war but after celebrations for America's 250th anniversary subsided, the Socialist Equality Party, whose American section proded its German section, orchestrated a resumption of the so-called Kriegsschulddebatte 1914 about Fritz Fischer's view on World War I over the course of two years with its peak in 2026.

Germany's leading conservative daily, the Frankfurter Allgemeine Zeitung (F.A.Z.), published an article on May headlined "Russia's role in the First World War reassessed" by historian René Schlott.[131] Schlott's article is based on a summarization of an article a Viennese philosopher of law named named Joachim Dolezik who published an article under the title, "Historiographical Debates on the July Crisis and the Question of Responsibility for the Outbreak of War in 1914" in the Zeitschrift für Geschichtswissenschaft (Journal of Historical Science) in 2025. Schlott's article describes how Dolezik "goes beyond Christopher Clark[132] and seeks the primary guilt with Russia."[133]

Dolezik's thesis, which is not only legally untenable but fallacious,[134] is based on the work Fritz Fischer published in the 1960s. Fritz Fischer's thesis, whose scholarship on World War I is extremely limited, claims Germany's ruling elite are "primarily responsible" for the outbreak of WWI. Fritz Fischer, who established in his book from 1961, Griff nach der Weltmacht that the German Reich pursued aggressive war aims whose accepted risk threaten not only Germany but Europe with a continential war, initiated the Kriegsschulddebatte 1914.

---

[130] An aspect of Stalin's terror, whose examination scholars hardly note, is the frequent reference to the Nazi's gestapo. William Stevenson's A Man Called Intrepid, for instance, claims that Reinhard Tristam Eugen Heydrich played a direct role in Stalin's decision to spread Stalin's genocide from politics to the military. Could it be that Stalin's inspiration for subjecting the shiniest brass from the Peasants' and Workers' Red Army to murder became Heydrich? Donovan relays how "Late in 1936, Heydrich had thirty-two documents forged to play on Stalin's sick suspicions and make him decapitate his own armed forces. The Nazi forgeries were incredibly successful. More than half the Russian officer corps, some 35,000 experienced men, were executed or banished. The Soviet Chief of Staff, Marshal Tukhachevsky, was depicted as having been in regular correspondence with German military commanders." (1976; pp. 33-4) It would be naive for anyone to believe the allegation that Stalin "suspected" Tukhachevsky, a communist with an impeccable record of service, could have ever betrayed USSR. Could it be that British intelligence obtained information about Reynard Heydrich's cooperation with the Stalinist NKVD that the crown has refused to release? The Stalin's extension of political genocide to the Peasants and Workers' Red Army is that for three out of five Soviet marshals, fourteen of sixteen military commanders in chief, all Russian Navy admirals of Ranks I and II, sixty of sixty-seven commanding generals, 136 of 199 divisional commanders, and 221 of 397 brigade commanders were murdered in cold blood. All eleven deputy defense commissars and seventy-five out of eighty members of the Supreme War Soviet were liquidated.

[131] ["Kriegsschulddebatte 1914: Russlands Rolle im Ersten Weltkrieg neu bewertet" Frankfurter Allgemeine. June 29th, 2026]

[132] Christopher Clark's bestseller is entitled, The Sleepwalkers: How Europe Went to War in 1914.

[133] The Second International, for instance, never laid blame for the outbreak of WWI at the feet of Germany's bourgeoisie. The resolution from the 1912 anti-war conference in Basil, Switzerland, stated: "If the governments cut off every possibility of normal progress, and thereby drive the proletariat to desperate steps, they themselves will have to bear the entire responsibility for the consequences of the crisis brought about by them." Trotsky, who sided with Lenin in his denunciation of WWI, never attributed blame to a single country, arguing on the basis of a fully developed critique of the capitalist economy that the breakdown in relations between the ruling elite in various countries resulted in a situation where the reaction could not but be the desire among one or more of the ruling elite to subordinate the interests of the some or the other ruling elite to their own. His views are laid out in detail in his book, Bolsheviki and World Peace (1918). Similarly, none would have claimed in the alternate that Russia, of all countries, could be "primarily responsible" for what is a result of the breakdown of the capitalist system, whose systematic breakdown drew the bourgeoisie from the outmoded forms of political nation states into a global conflict.

[134] Any scholar versed in the law, Germany's, International, or historic laws, could easily provide a succinct, legal, bulletproof refutation of Dolezik's crude signaling to Russia.

The idea that Germany is "primarily responsible" for World War I is as fallacious as Fritz's own work is limited. Primary responsibility is a contradiction in terms. Aside from the philosophic concepts Fritz exploits, focus on Serbia, the assassination of Franz Ferdinand, or the reaction to both events is a shadow on the wall. The Great Powers, who had been fighting each other in various wars for more than three hundred years (such as the Russo-Ottoman wars), had already begun to fight each other directly or in proxy wars (before the concept had even begun to develop), merely agreed to fight each other directly for the first time in alliances across the European landmass. WWI is merely a transformation of European warfare on the European landmass, as the causes may be derived almost exclusively from these prior wars.

Fritz's account is therefore incompatible with a comprehensive scope of the scale of war preparations throughout eastern Europe in the area of the collapsed Ottoman Empire, whom the imperialist powers, Russia included, sought to divide further; it had nothing to do with Serbia. It had to do with trade routes, a balance of European power (the likes of which the French sought to achieve with a repudiation of Napoleon's refusal to honor Russian interests with England), a further division of the collapsed Ottoman Empire. Without a proper discussion of the Baghdadbahn or Russia's occupation of Iran and the area extending below the Caucasus, Fritz's account of Serbia and its centrality to the outbreak of WWI stands aside, apart from, and outside of a large body of work, research, and understanding. The idea that Serbia, the assassination of the Duke Franz Ferdinand, and the relations between the European powers reflected in the act is responsible for the war and serve as its point of departure falls on the face of the drive from one bourgeoisie to subordinate all others.War is a continuation of politics by other means and the Russian policy of dismembering and incorporating the further dismemberment of the collapsed Ottoman Empire extended into and represented one of the causes of WWI no less than Germany's own anti-Russian pro-Ottoman policy. Fritz' thesis is a reactionary, anti-working class analysis, and his application of "guilt" to the German nation rather than the German bougeoisie and its subsequent denial of any role to Russo-French imperialism is therefore ahistorical and incomprehensible and must be rejected. Fritz, for instance, cannot account for Germany's Nachrichtenstelle für den Orient as a response to Anglo-Russian expansion in the Middle East that directly threatened German Imperialism's own expansion through the collapsed Ottoman Empire.

Die fröliche Minute () • Printed in 1966 in German Democratic Republic by Verlag Junge Welt, Die fröliche Minute chronicles a series of comics like those in the Sunday newspaper.

---

[135] A splendid article from one of Israel's dailies on the subject provided a smokescreen for U.S. participation in a covert operation to extract American hostages kidnapped by the terrorist organization, Hamas, whose ranks rose again after the country's almost complete decimination, in the Gaza Strip during the third anniversary of the Ukraine war.

[136] In its March issue for the week 1st to 8th (2024), Time magazine featured an article entitled, "The New Age of Naval Power," explained how reliance on the concept of mass such as "[the] numbers of combatants— surface, submarine, and air—and a capacity to regenerate them at scale makes all the difference in war at sea." The Ukraine war underscored how naval power together with the ability to regenerate a fleet at scale has restored a central feature of great power struggles

Frigate () • The rise of "gunboat diplomacy"[135], naval power[136], or gunboat capitalism[137] Within the context of these changes, the struggle to broker a compromise against the dangers the bleeding edge of technology presents to aircraft carriers but aimed at the expansion of a fleet, despite the challenges shipbuilding presents to countries like the U.S. (with multiple classes of destroyers), has given rise to a struggle to design the most powerful, lethal, fast frigate. The frigate, neither a small ship nor a ship with guns a navy cannot lose like those on a destroyer but certainly not the type of ship a military budget cannot produce within a few weeks (i.e., an aircraft carrier), is now the focus of great powers from one end of the earth's surface to the other, especially in the United States.

Forty Day War & Aftermath () •

Launched more than a week after the fourth anniversary of the Ukraine war, the forty day war lasted from February 28th to April 3rd, 2026. Subsequent negotiations on a memo of understanding lasted from April 3rd to June 18th.

Assessments of the war conclude the United States suffered a defeat greater than that in Vietnam but these assessments are preposterous. It is hard to consider the Forty Day War anything more than an overblown American air campaign on a scale exceeding the first or second Persian Gulf wars. It is almost insane to consider comparing Vietnam to the Forty Day War; it takes a lunatic without the slightest degree of familiarity with these two wars to draw just such a comparison, for the two wars differ markedly. If they are almost incomparable, certainly their comparison affords the least possible understanding about wars, the United States, or history in their aftermath.

The Forty Day war must be analyze within the context of America's own crises. It cannot be analyzed, except through these crises. An assessment for the outcome of the war depends upon an understand of these crises. One of the many crises is America's currency. In the 21st century, the permanent revolution private central bankers launched with the US Federal Reserve on December 13th, 1913 had begun to exhaust itself, an expression of which became not only a debased US dollar but the death of a collapsing US dollar, whose features, otherwise an impermeable feature of its strength, began to disintegrate rapidly. The rapidity of these disintegrations manifest itself primarily in the rising price of gold. On January 29th, 2026 COMEX, whose founders Melemed, Greenspan, Friedman from the Chicago Mercantile Exchange established for the sake of currency manipulation, failed to short sell the precious metal for the first time in history, demonstrating that the US not longer wielded power over the precious metals. It had lost that

---

from the 20th century. Within great powers struggling to assert dominance over a maritime trade route or an entire sea such as the Baltic Sea (called a NATO lack during the Biden administration), the Black Sea, the Red Sea, the Straight of Tiran, the Straight of Hormuz, the South China Sea, or the Straight of Taiwan (where no fewer than three trillion dollars pass yearly, according to an article published by Sky News Arabic on September 14th, 2025 under the title, "الصين تحذر الفليبين من "الاستفزاز" في بحر الصين الجنوبي), the concept of naval power heralds a new era in the strategic value of oceanic combatants or capital ships not merely for protecting a nation's international standing but ambitions for markets, trade, or commerce in an anarchical global economy without a single superpower to dictate policy, law, or power relations, indicating that a fundamental change in relations at sea has occurred. The Ukraine war has transformed the 21st century in a maritime century where the ability to leverage new or emerging technologies such as drones or AI is defining how combatants or capital ships relate to the modern oceanic battlefield

[137] In its January issue for week 17th-23rd with a subtitle, "Horror in Iran," the Economist (2026) featured a well designed illustration of a wooden ship with a series of high-rising columns of containers on the ship. In a post advertising "gunboat capitalism," the caption reads: "Gunboat capitalism is back. It will make the world poorer, and Donald Trump's use of companies as a tool of state will make it less safe, too."

power to China. In an effort to quell the untamably rising price of gold, the US launched its illegal war of aggression, whose decapitation strategy provided the outgoing Ayatollah with a surrendipitious entry for the incoming Ayatollah in accordance with Ashura mythology, with the aim of creating the greatest liquity crisis known to man. While central banks like those in Turkey or Saudi Arabia sold their gold, they most certainly did not buy any US treasuries, many holdings of which witnessed outflows. The US managed to lower the rising price of gold but without any influence on its fundamentals. Central banks such as the People Bank of China, for instance, bought 7 tonnes of gold in April followed by 10 tonnes in May, demonstrating increasing demand for the precious metal. Several countries followed suit (i.e., Poland). What the US gained from suppressing the price of gold by war, the US lost in US Treasuries, accelerated accumulations of debt (such the 300 billion dollars the US accumulated in the first quarter of 2026), or influence.

Israel lost the most. In opposition to its project for a new Middle East, the entire Persian Gulf turned away from normalization with Israel to forge alliances with Turkey, whose decision to revive the Baghdadbahn (i.e., Hicaz) railway not only determined the direction of the newly established overland routes for Eurasia but left no terminal endpoints for Israel. The overland routes from the major centers of the Persian Gulf flow through Turkey straight into Europe without an oceanic port in the Mediterranean. The newly established plans for a Pax Mongolica over the Eurasian landmass became one of the supra-macro-economic consequences of the Forty Day War.

Alongside the crisis in the death of the collapsing US dollar is the crisis of America's defense industrial base. While a Congressional report confirmed the Iranians succeeded with the destruction of America's post-WWII Cold War arsenal of heavy weaponry, the DIB failed to demonstrate its relevance for 21st century conflict. At a time when the actual cost of effective weapons such as drones have diminished significantly in comparison to fighter jets, Pete Hegsteth, the US Secretary of War, requested not only an increased defense budget at 500 billion but 300 billion for the war, the combined total of which would represent the greatest budget for "defense" in the history of mankind. These facts combined to undermine completely America's DIB for 21st century warfare, especially in comparison to the expenditures Ukraine's or Russia's DIB accrue in the Eurasian war on the pontic steppes. Neither Ukraine's nor Russia's expenditures for its DIB come close to what the Pentagon requested, clearly demonstrating that America's DIB is in a fully exposed material crisis of epic proportions.

The periods of President Donald J Trump's illegal war of aggression are as follows: The first period of the Iranian war proceeded from the beginning to the end of the assembled armada; the second period began with the initial strike through the ceasefire; the third period extended from the ceasefire to the Memorandum of Understanding; the fourth period spanned from the signed Memoranda of Understanding to its termination; the fifth period is from the end of the Memorandum of Understanding onward. The fifth period is the final period, as both interest payments as well as the yield curve on US Treasuries begin to crack under the overwhelming weight of America's insistence on sovereign indebtedness.

Fugazi () • Fugazi money, which refers to fake, counterfeit, or worthless currency, is a term that has re-entered America's lexicon for use against the American dollar. In the context of the 2013 film The Wolf of Wall Street, Mark Hanna

(Matthew McConaughey) uses the term metaphorically to describe stocks as "fairy dust" that doesn't exist and is not real, expanding the meaning of the term beyond currency to stocks. It is likely a more competent usage for the term refers less to stocks, even though many had already become "fairy dust" by 2026, than to currency, which in terms of the US dollar has a strong basis related to the various aspects, features, or properties the currency has already lost.

G

Gage, Phineas P. () • Published in 1869, John M Harlow's Recovery from the Passage of an Iron Bar Through the Head on Phineas P. Gage represents one of the longest standing challenges to the science of psychology, neuroscience, neurology or biology in the history of these fields.

Galbraith, John Kenneth () • In an documentary TV series under the title The Age of Uncertainty the BBC filmed, Galbraith, who received a Presidential Award of Freedom, criticized not only America's economy but capitalist economy in general. The documentary series, which spans more than 15 separate episodes contrasts sharply with the attempts on YouTube to create content without the benefit of a clear plan for what the content is The episodes in his documentary are the following: 1. The Prophets and Promise of Classical Capitalism, 2. The Manners and Morals of High Capitalism, 3. The Dissent of Karl Marx, 4. The Colonial Idea, 5. Lenin and the Great Ungluing, 6. The Rise and Fall of Money, 7. The Mandarin Revolution , 8. The Fatal Competition, 9. The Big Corporation, 10. The Land and People, 11. The Metropolis, 12. Democracy, Leadership, Commitment, 13. Weekend in Vermont (which is broken down as three one-hour programmes in which Galbraith discusses economics, politics and international relations with guests such as Henry Kissinger, Georgy Arbatov and Edward Heath).

Galbraith is famous for a series of lectures he delivered on the New Industrial State, where he explains how modern capitalism is as much committed to the execution of centralized planning as economies whose leaders implement market reforms to induce society to form socialist relations. These lectures, which are indispensable to dispelling the myth of chaos for economy, demonstrate that far from democratized access to the means of production under American capitalism, American capitalism is concentrated in the hands of a privileged few who plan just like Soviet planners but with an unashamed, unabashed, und unfettered caprice guarantee self-enrichment for none but the few.

---

[138] In an article published in Foreign Affairs, John J. Mearsheimer, a veteran, under the title, "Why the Ukraine Crisis is the West's Fault," lays "most the of the responsibility for the crisis" on the United States and its European Allies. The taproot of the problem, Mearsheimer argues, "is NATO enlargement, the central element of a larger strategy to move Ukraine out of Russia's orbit and integrate it into the West." ["How the West Provoked Putin," Foreign Affairs,"See America: Land of Decay and Dysfunction," September/October, 2014] "For Putin, the illegal overthrow of Ukraine's democratically elected and pro-Russian president-which he rightly labeled a "coup"-was the final straw. He responded by taking Crimea, a peninsula he feared would host a NaTo naval base, and working to destabilize Ukraine until it abandoned its efforts to join the West."

Maidan coup d'etat into a full-scale provocation.[138] Gantz's book, Operation Barbarossa: Hitler's Invasion of Russia 1941 provides a detailed historical account of the failed German offensive launched on June 22, 1941 against the Soviet Union.

Gapon, Father Gregory () • During the third anniversary of Ukraine's war, Father Gregory's Gapon's march, which started the ”dress reheresal for the Russian revolution,” witnessed its 120th anniversary, marking one of the greatest events in the history of Russia, if not mankind. Of 1905, Trotsky wrote: ”As agreed, the march to the palace was a peaceful one, without songs, banners, or speeches. People wore their Sunday clothes...The soldiers fired all day long. The dead were counted in the hundreds, the wounded in the thousands. An exact count was impossible...” .

During the 1905 uprising, Trotsky became the Chairman of the Petrograd Council of Workers' Deputies. December 2nd, 1905, Trotsky declared: ”The autocracy never enjoyed the confidence of the people and was never granted any authority by the people. We have therefore decided not to allow the repayment of such loans as have been made by the Tsarist government when openly engaged in a war with the entire people.” It is only after Trotsky declared he would not authorize the repayment of Czarist debts that government troops surrounded the Soviet with a warrant for his arrest. On December 3rd, 1905, the Czar arrested Trotsky. On October 4th, 1906, Trotsky, who appeared in propria persona without counsel, made a famous speech where he derided the Czarist government's false, factually unsubstantiated, politically motivated claims that he had fomented a rebellion. In response, Trotsky famously remarked: ”You cannot prepare a revolution. You can only prepare for a revolution.” The Czarist judges, who forsook law for obedience to the Czar, proceeded with the malicious prosecution, falsely convicting him with a sentence for exile to Siberia.

After escaping, Trotsky wrote a book called 1905. Trotsky's book on 1905 is one of the first expositions of the politicization of the general strike for the ascension of worker power in the history of mankind.[139] It contains a detailed history of Trotsky's observations in the months following the aftermath of the Czar's decision to transform Father Gregory Gapon's march into a massacre. The result rebounded. The attempt to suppress the protesting workers with a massacre fueled the fire of rebellion many times over. The workers, who previously sought to do nothing more than march on the Winter Palace with a petition, began to organize for the Czar's overthrow. The Czar's massacre thus undermined his initial desire.

Trotsky details these events with stunning accuracy. Although he far removed from the uprising in the Black Sea, Trotsky recounts the red mutiny.

The Russians mocked the Czar for his shameless and fearless reactions to the gathering storms in St. Petersburg during the 1905 revolution in a journal called, *Стрелы*, sized 30.5 21 centimeters, a shameless and fearless journal. The journal[140] began to publish after the «манифеста 17 октября», a key turning point in the history of the 1905 revolution. В.Е. Маковский (1846-1920) painted one of the most famous pictures of the 1905 revolution, called 9 января 1905 г. на Васильевском острове; Б.М. Кустодиев (1878-1927) painted a number of pictures called Манифестация, Первомайская демонстрация у Путиловского завода, Вступление. 1905 год. Москва; И.Е. Репин (1844-1930), the head of Russia's peripatetic painters, painted anumber of famous pictures on the 1905 revolution; these are Манифест 17 октября 1905 года and Красные похороны (1906). И.А. Владимиров (1869-1947) painted a number of paintings on the early days of the 1905 revolution such as Разгром манифестации 9 января 1905 года, Расстрел на Пресне в декабре 1905 года, or Баррикады на Пресне, depicting not only the Czar's slaughter against Father Gapon's march but the famous street battles на Пресне. Валентин Серов painted a series of paintings. One is called «Солдатушки, бравы ребятушки! Где же ваша слава?» (1905) where Серов is clearly criticizing the Russian soldiers from St. Petersburg who participated in the Czar's bloody reprisal against Father Gapon.

---

[139] Suppressed within the Socialist Equality Party, the book is considered to be incapable of inversion. While the terminology associated with the process of a general strike may be mocked many times over for orchestration, the actuality of a general strike is far too chaotic to be without the risk of lost control. The SEP thus focuses training for candidate members away from the uncontrollable to the controllable. The party focuses on Trotsky's Results and Perspectives, or, The Russian Revolution, both of which are capable of inversion for deployment against workers in regime change operations.

[140] A complete list of the famous journal published from 1905 to 1906 covers most of the 1905 revolution. Published under the publisher, , the journal managed to produce no more than № 1—9. According to Russian sources, the Czarish police ordered № 1, 2, 5, 9 to be censored, committing the confiscated numbers to the flames. The most famous number, № 7 (от 22 декабря 1905), which the editors dedicated to the December uprising in Moscow, severely criticized the Czar's

A response to the 1905 revolution led to divisions within the community of Russian painters with the paintings often revealing these divisions in art.

gay divorce () • The lack of gay divorce in American society is a multifaceted conspiracy against heterosexual couples, child birth, and the nuclear family. In contrast to homosexual couples, heterosexual couples are required to consummate a marriage within a State but the modern American state where American heterosexuals consummate marriage, is designed less to ensure matrimony until death but to profit from the eventual destruction of the family until death. The lack of gay divorce, however, safeguards homosexuals from the parasites that cling to the nuclear family; gays are not required to marry so they are not required to divorce. They're free to move from one relationship to another or the dominant homosexual is free to continuing dominating the subdued homosexual.[141]

The modern American state manifests the vast majority of these parasites, celebrating their existence with honorific titles as though they were contributing value to society when in all reality they are merely hastening its destruction for personal gain. These parasites are the ”family” law

---

bloody reprisal against the Russians in the uprising. The cover displays a picture of a heart dripping with blood with the caption reading, «Москва — сердце России». On the last page of that number, a picture with the caption, «Судный день», celebrates the first anniversary of the 1905 revolution. In a sign of unity, the journal depicts peasants, soldiers, and marines walking hand in hand with the caption, «Самый прочный союз». The author has copies of each number.

[141] A great many of the subdued homosexuals in homosexual relationships look for a way out of the relationship but the fact that the subdued homosexuals are necessarily in place to guarantee at least one aspect of the multifaceted conspiracy against heterosexual couples forbids the modern American state from pondering the considerations at its disposal for the emancipation of the subdued homosexual. It would not make sense, for instance, for the modern American state to allow subdued homosexuals to exploit the generally accepted justification for females. A subdued female homosexual filing a petition for a restraining order because she wants to prevent her dominant homosexual partner from ”rapping” her undermines the utility value of ”rape” for married women with a male husband. A certain degree of steadfast definition, the likes of which gay divorce threatens, is required to guarantee the overall utility value of heterosexual divorce for the conspiracy. The result is that dominant homosexuals, male or female, are able to continue to dominate their subdued partners, maintaining control over the relationship, children, or property. It means that homosexual relationships provide a far more powerful role in American society for a dominant personality to persist than a heterosexual marriage. Consequently, homosexual relationships are far more private, consistent, or maintained than heterosexual relationships because none of the partners have a recourse or remedy the modern American state would like to exploit for its voracious appetite of destruction.

lawyers, social workers, judges, or Courts, the vast majority of which could not function for gay divorce for lack of marriage, children or property but for marriage, children or property now find meaning as a "family lawyer," a "family law judge," "child social worker," not from heterosexual marriage but divorce. Not only do heterosexual divorces sustain a major function of the parasitic police state bureaucracy (i.e.,"family" law lawyers, social workers, judges, or Courts) but make a tremendous amount of money from their hosts, sucking their blood for years on end. In comparison to the amount of money generated from gay divorce, heterosexual divorce is a major market for the State; "family" lawyers file petitions for dissolution, child social workers concoct diagnoses for prescription medicine from therapy sessions charged to the dissolution, "family" law judges make rulings, the "family" law Courts produce opinions.[142] Homosexuals are not only immune from but do not contribute to the amount of money the State extracts from the labor value of familial dissolution.

Geymonat, Ludovico () • Ludovico Geymonat (May 11th, 1908 - November 29th, 1991) produced a seven volume work on philosophy called Storia del Pensiero filosofico e scientifico, published by Garzanti in Milano, Italy from 1970 to 1976, with far more depth than the no less handy Dictionary of Philosophy by Blackwell. It contains the following in the following order: Storia del pensiero filosofico e scientifico. I: l'Antichità, Il Medioevo. II: Il Cinquecento, Il Seicento. III: Il Settecento. IV: L'Ottocento. V: Dall'Ottocento al Novecento. VI : Il Novecento (1). VII : Il Novecento (2). Comparable only to Borchert's Encyclopedia of Philosophy[143] in ten volumes, Geymonat's Storia differs in its historical approach to the encyclopedia. In the first volume, Geymonat, for instance, discusses how "La scuola pitagorica rappresenta un movimento di pensiero di livello scientifico molto superiore a quello della scuola ionica."

Geymonat's encyclopedia, however, is just not historical; it is analytics. In opposition to the great number of enthusiasts for sets, Geymonat subtly lays out « aritmo-geometria » where "[in] particolare, la concezione ora spiegata spinse i pitagorici a studiare la geometria per via aritmetica." Geymonat's extensive knowledge of mathematics thus positioned him ahead of his times for a renaissance in the study of geometry.

It is one thing to assemble an encyclopedia; it is an altogether different thing to assemble a historical encyclopedia with an emphasis on a space in time. Geymonat's contribution refocuses our attention away from knowing this or that philosophical or scientific thinker to experiencing their contributions with chronology. Written entirely in simple Italian prose, Geymonat's easily readable encyclopedia in seven volumes thus provokes readers to take up a study of the Italian language.[144]

Ghana () • Once upon a time, Ghana used to be a Gold Coast. Before miners in South Africa found gold, nearly one-third of gold production throughout the world came from its illustrious shores, and even as late as 1961, Ghana ranked fifth in the world with 34 tonnes per annum. In its most famous mine, Ashanti, for instance, Ghana could boast about the high quality of its grades for generations. In some of its reef, nearly 200 grams are found in no more than a tonne. By 1980, however, Ghana's prolonged economic crisis resulted in a significant decline in investment. The mines suffered. At Ashanti, whose ownership the government split from fifty-five to forty-five with the London mining house, Lonrho, the mine failed to produce more than 7 tonnes. With its other three mines, Ghana managed to produce no more than 12.8 tonnes. In Africa, Ghana remains the African country with the highest number of refineries.[145]

---

[142] The fact that Americans do not read the opinions appellate Courts issue not just on family law but on all matters concerning the Courts is one of the major reasons Americans remain in the dark about the trappings of the modern American state; of the ones who are capable of reading, few of these interest themselves in the opinions of the Court, even though these are promulgated.

[143] Others are [Edwards, Paul. The Encyclopedia of Philosophy (Volumes 1 through 8) January 1st, 1972], [Zeyl, Donald J. Encyclopedia of Classical Philosophy. June 25th, 1997], [Audi, Robert. The Cambridge Dictionary of Philosophy. Cambridge University Press. September 28th, 1999.] Borchert's, however, is the only encyclopedia that offers a comparison.

[144]

Russia[146] announced on Friday, October 30th, 2026 its agreement to work with Ghana on developing a 2,000-megawatt nuclear power plant following talks at the Russia-Africa Summit, Ghanaian Foreign Minister Samuel Okudzeto Ablakwa said on that Saturday. The talks on Ghanian nuclear power took place between Russian President Vladimir Putin and Ghanaian President John Dramani Mahama during the third Russia-Africa Summit, which took place on October 28–29, 2026.[147]

According to the Ichikowitz Family Foundation's African Youth Survey, Russia's popularity among African youth has just surpassed France with 54

According to Ablakwa's post-Summary summary post, Mahama secured six concrete commitments. Apart from the agreement on energy, Ghana secured a new defense pact to acquire "strategic military assets for the globally respected Ghana Armed Forces,"[148], agricultural cooperation such as boosting grain production and Russian provision of fertilizers, a Russian commitment to increase scholarships for Ghanaian students. Ghana now ranks second as the African nation with the most number of students; President Putin's declaration that Ghanaians are no longer allowed to participate in the war with Ukraine. Ghana and Russia will revive the PJCC (i.e., Permanent Joint Commission for Cooperation), a way to maintain the cordial and mutually beneficial formal bilateral relations since 1958.

Ghana's agreement with Russia, the most important development, is a revival of Osagyefo Kwame Nkrumah's vision that the CIA obliterated with its coup d'état on February 28, 1966. With Ghana, Africa's new aspiration for energy independence is one of the consequences arising from the fifth period of America's steepest decline in global superpower. Whereas in the past the Central Intelligence Agency could operate freely throughout Africa, murdering heads of state such as Nkrumah, Ghana's first president, whom the CIA overthrew in a coup on February 28, 1966, after publishing

Ghana's new relations with Russia during the fourth anniversary of the Ukraine war (which coincides with the third Russia-Africa Summit) are also a direct result of Russia's successful support for the countries in the Sahel alliance, an alliance that formed after Russia defeated Ukrainian forces in the city of Bakhmut-Artemovsk. Alongside of Russia's agreements with Ghana, Ghana has begun to adopt the Eurasian strategy for commerce, trade, or banking. Ghana has emphasized the use of local currencies (i.e., two-currency flows) with a shift towards a gold standard for exchange with the introduction of China's Cross-Border Interbank Payment System, an alternative to SWIFT's weaponization. "When a business crosses a border, its bank should not become another border," the Chief Executive of Stanbic Bank Ghana[149], Mr. Kwamina Asomaning, stated on September 22nd, 2026 during the Ghana-China day his bank organized with the Industrial and Commercial Bank of China (ICBC), a conference under the title, "Connecting Capital, Commerce and Opportunity in the Ghana-China Corridor."

---

[145] 1. Ghana — 5 refineries, 2. Zambia — 4 refineries, 3. Uganda — 3 refineries, 4. Tanzania — 3 refineries, 5. South Africa — 1 major refinery, 6. Sudan — 1 refinery, 7. Rwanda — 1 refinery, 8. Zimbabwe — 1 refinery, 9. South Sudan — 1 refinery, 10. Kenya — 1 major refinery, with more planned.

[146] The Russians and Chinese have begun to adopt a coastal strategy with Africa.

[147] The first Russia-Africa Summit occurred on October 23–24, 2019 in Sochi, three years before Russia's full scale invasion on February 24th, 2022; the second Russia-Africa Summit occurred on July 27-28th, 2023 in Saint Petersburg after the second anniversary of the Ukraine war. Representatives from 48 African countries participated in the third summit, as well as 22 heads of state, according to Kremlin presidential aide Yury Ushakov. Heads of state from 17 countries attended the last summit in 2023, demonstrating that five more heads of state attended the third over the second. None of the G7 countries host Africa or African nations for summits, as Africans are just like Muammar Gaddafi, the head of state the G7 countries murdered with the complicity of the Gulf States during the Arab Spring for his invocation of a golden dinar.

[148] It is likely that like many of the members in the Sahel alliance, the majority of these military assets are likely to be drones, anti-air defense, or satellite, radio, or communication equipment.

A significant component of the Eurasian strategy for Africa is to convert dollar denominated debt to yuan, as in Zambia, Kenya, and Ethiopia have done, to trade without tariffs, as China extended its zero-tariff treatment to 53 African countries in May, three months after the fourth anniversary of the Ukraine war, reducing the number of foreign-exchange conversions from Ghana to China for largest categories of trade such as mineral fuels and oil (about $933millionwithGhana)andores(about$356 million with Ghana), mainly manganese.[150]

Gold Backed US Treasuries () • The problem with "gold backed treasuries," circulated primarily in the beginning of 2026, is that America has monetized its debt to such an extent that any attempt to sell American debt, backed by gold or any other commodity (such as oil), confronts a lack of demand, as America's current debt cannot be repaid.[151] Since America's current debt cannot be repaid, it is rational to believe that America cannot repay any future debt on current purchases. There are other problems, however. Why buy a gold backed treasury over gold? Anyone with any sense of economics cannot choose a promise to repay a purchase with gold, if or when the actual purchase of physical gold relinquishes, ipso facto, the need to be repaid in the first place. Moreover, a gold backed US Treasury Note is contrary to the nature of the US Federal Reserve, whose mechanisms (i.e., Quantitative Easting) provide its modus operandi with the ability to extract surplus value from the US dollar, rather than any guarantee for repayment. Any standardization of its value, as standardized values prevent mechanisms like these from successfully extracting surplus value, prohibit the US Federal Reserve from executing on its strategy for fiat currency. The US Federal Reserve is a modern day manifestation of the Reichsbank, whose aim became the monetization of its debt, on a global scale. These three reasons made the issue of gold back US Treasury Notes contrary to the spirit of the Reichsbank.

---

[149] "Stanbic Bank Ghana's ability to offer CIPS and RMB services became is anchored off the African coast in a strategic partnership between its parent, Standard Bank Group, and ICBC, a relationship dating back to the 2008 Great Financial Crisis when ICBC seized the opportunity to acquire a 20 per cent stake in Standard Bank Group, becoming the group's single largest shareholder, a tie-up that brings together the world's largest bank by assets and Africa's largest banking group."

[150] The dollar and fiat currencies in general become irrelevant when countries like China supply a broad range of manufactured goods, including machinery, electronics, vehicles, and textiles in exchange for minerals, fuel, or oil as it does not only with Ghana but the whole world.

[151] A study by hedge fund Hirschmann Capital published on July 15th, 2020 in its H1 2020 Update Letter analyzing data since the 1800s found that 51 out of 52 countries with gross government debt exceeding a 130 percent in terms of a debt-to-GDP ratio subsequently defaulted on their debt, either through restructuring, devaluation, high inflation or outright bankruptcy. Japan is the lone exception. Currently, Japan, the only exception, is one of the few countries, whose government managed to avoid default, despite the government debt at a ratio of debt-to-GDP greater than 130 percent. In a subsection under the title, "Government Default Seems Unavoidable," Hirschmann described how the "IMF [expected] US government (USG) debt to GDP to be record 141 per cent by year-end 2020. Hirschmann declared how "[there] is little reason the USG should not also default (see year-end 2016 letter). In his endnote to that letter, Hirschmann famous chart with Argentina, Spain, Turkey, UK, France, Germany, Japan, Australia, Canada, Ghana, Costa Rica, and Greece, a chart republished nearly a hundred times over since Hirschmann's July 15th, 2020 newsletter.

Golden Shower () • In an article under the title, "Business: Solid Gold Tub" published on Feburary 24th, 1980[152], Time explained how a Japanese hotelman and hotelier Hideki Yokoi built a phoenix, the symbol for advocates of the "Great Reset"[153], 22-karat, solid gold bathtub in 1966 for the basement of his Funabara resort on Izu Peninsula, a mountainous, volcanic region in Shizuoka Prefecture, Japan, located approximately 100 kilometers southwest of Tokyo. The bathtub allegedly imparts an extra year of life for every minute a bather stays submerged.

Commissioned to span 151 cm in length, 76 cm in width, and 61 cm in height, using 124 kilograms of 22 gold (with 85.7 percent purity),Kitamura Seibo designed but Yamazaki Shoten, a precious metals dealer in Ginza, Tokyo, actually produced the bathtub. At 140 kilograms total weight, which included approximately 124 kilograms of actual gold, the price of Hideki Yokoi's phoenix skyrocketed when gold, which rose to its zenith at 5,597.23 on January 29th, 2026, its highest price ever on, subsequently rose to 22,313,063.06. The latter value contrasts sharply with its original. When Shoten completed the bathtub on December 14, 1964, the official U.S. price of gold remained fixed at 35.00 US dollars per fine troy ounce under the Bretton Woods Conference but held steady by the U.S. Treasury and the London Gold Pool, while the open market London fixed price hovered closely around 35.10 US dollars to 35.15 US dollars per ounce. The bathtub thus cost no more than 139,534.255 at the time of its completion, a phenomenal difference in value more than 160 times less than its later value. It is likely more appropriate, however, to claim that the value of the dollar relative to Yokoi's bathtub fell by more than 160 times, meaning that any one clinging to the death of the collapsing US dollar cannot but pay more than 160 times the amount Yokoi paid initially for his bathtub.[154]

Gouge, William () • A famous historian, William Gouge (1796 – 1863), who earned his prestige from the publication of a seminal treatise in 1833 called A Short History of Paper Money and Banking in the United States, which celebrated its 190th anniversary during the second anniversary of the Ukraine war. Originally published by T. W. Ustick in Philadelphia, Pennsylvania, Gouge's book is the most widely read book on the economic issues in U.S. history prior to 1879. Historian Sean Wilentz claims that, "if anyone was the intellectual architect of Jacksonian economic policy after 1832, it was the Philadelphia radical William Gouge."[155] In 1829, a group of influential Philadelphians, including William Duane, editor William M. Gouge, and members of the Working Men's Party, presented an influential report claiming that banks "laid the foundation of artificial inequality of wealth, and, thereby, artificial inequality of power."

---

[152] Gold sold at 667 per Troy oz at that time.

[153] The "Great Reset" became a propaganda myth about which America's ruling elite prompted prominent talking heads to tell stories on YouTube. The propaganda myth is based on the idea after the death of the collapsing US dollar a revival, rebirth, or resurrection will take place like the Phoenix's rise. The propaganda myth, like the propaganda myth on "gold backed US Treasuries," is based on the false premise that in the new world order monetary policy might not only be under American control but subject to America's fiat currency, US Treasury or US Federal Reserve, even though the death of the collapsing dollar undermines the mechanism by which these entities function (i.e., the extraction of surplus value by various means).

[154] It is unclear whether the ratio of minutes submerged to imparted extra years of life derived from its relation to the value of gold. If so, the ratio of a minute to 365 days must now be less a matter of years than lifetimes. If the ratio derived from its relation to the value of the dollar, the ratio must now be less a matter of minutes, than seconds.

[155] Daniel Feller, Sean Wilentz. The Rise of American Democracy: Jefferson to Lincoln. New York: W. W. Norton. 2005. p. xxiii, 1044.

grapes () • Mohammed's original program began with praise for wine. In Sura xvi. 69 Mohammed even praises wine as one of the signs of Allah's grace unto mankind: "And of the fruit of palm-trees, and of grapes, ye obtain an inebriating liquor, and also good nourishment".

Alexander Grothendieck () • Alexander Grothendieck is one of the greatest mathematicians of the 20th century. A prolific writer, Grothendieck created a number of foundational assumptions in mathematics. Many of the later works Grothendieck wrote are more than capable of emendation.

Towards the end of his life, Grothendieck escaped academia, a worthless lot of sycophantic, servile, petty subordinates, to the French countryside where he became a shepherd, who tended, herded, and guarded sheep.

Gladio () • The operations the Central Intelligence Agency conducts on the soil of Eastern Europe recalls the sinister campaign of Gladio.[156]

Glass, Philip () • Philip Glass is an American composer who is the first in the history of music to compose an opera on Akhenaten, Amenhoptep IV, the Egyptian Pharaoh whose decision to draw Egypt's worships away from demiurges to the sun alone marked a distinct break in the history of human monotheism. In Act 2, Scene 4, the sopranno sings Akhenaten's great hymn to the only god Aten, one of the earliest renditions of sun-worship in the history of mankind. Glass follows the hymn with the superimposition of Psalm 104 in Hebrew, eliciting the ancient Egyptian origins of monotheism for the Abrahamic faith in a widely celebrated theme in the tradition of Western classic music.[157] The culmination of a trilogy including two other biographical operas, one called Einstein on the Beach, the other Satyagraha, Akhenaten is the first in the celebration of individuals whose inner vision not only altered the age in which they lived but the future course of mankind. While the most cliché typification groups Akhenaten with religion, Einstein with science or Ghandhi with politics, the ideas these revolutionary visionaries implemented in society intercrossed the entirety of society. Written in 1983, Glass' Akhenaten celebrated its fortieth anniversary during the Ukraine war's first anniversary.

---

[156] A trilogy produced by the BBC details how the CIA played a role in manipulating the political affairs of post-war Europe through an operation called Gladio. The documentary is called, Gladio. Named after the codename for the clandestine "stay-behind" operations of armed resistance organized throughout the Western Union or the Brussels Treaty Organization (BTO), and subsequently by NATO and the CIA, in collaboration with several European intelligence agencies. Organized on the death of Operation Unthinkable, Gladio sought to thwart a potential Warsaw Pact invasion and conquest of Europe. Although Gladio refers specifically to the Italian component of NATO "stay-behind" operations, "Operation Gladio" is used as the catch-all for the sum total of all the operations within its mission. Based on interviews with Vincenzo Vinciguerra, from his jail cell in Italy, by Libero Gualtieri, who spearhead the Italian Parlimanet's Inquiry into Operation Gladio, the series details how the CIA perpetrated systematic, illegal, anti-Constitutional acts of terrorism in Italy during the "Years of Lead" (late 1960s to early 1980s). In 1990, the European Parliament adopted a resolution alleging that military secret services in certain member states participated in crime and terror. The resolution also urged investigations by the judiciaries of the countries in which those armies operated, so that their modus operandi and actual extension would be revealed. To date, only Italy, Switzerland and Belgium have had parliamentary inquiries into the matter.

The three inquiries reached very different conclusions indeed. Guido Salvini, a judge from the Italian Massacres Commission, concluded that some of the right-wing terrorist organizations active during the "Years of Lead" such as La Fenice, National Vanguard, or Ordine Nuovo were the trench troops of a secret army, remotely controlled by exponents of the Italian state apparatus and with verifiable and evidenced ties to the CIA. The Swiss inquiry, on the contrary, found that British intelligence secretly cooperated with their army (i.e., Switzerland's) in an operation called P-26, providing training in combat, communications, and sabotage. It also discovered how P-26 not only organized resistance to the possibility of a Soviet invasion but also stipulated to its activation, should a left wing party ever succeed with a sufficient number of votes to guarantee a majority in parliament in a clear repudiation of democracy. The Belgian inquiry, the least conclusive of all, found no evidence to support claims about the Belgian army. It found no links between the Belgian army and terrorist attacks but noted that Belgium's secret services refused to provide the identity of agents. A 2000 Italian parliamentary report from the left wing coalition Gruppo Democratici di Sinistra l'Ulivo reported that men inside Italy's State institutions who maintained ties to American intelligence conducted terrorists massacres and bombings. The report also said that the United States was guilty of promoting a strategy of tension. Operation Gladio is also suspected to have been activated to counter existing left-wing parliamentary majorities in Europe. In a brazen denial of its past crimes, the US State Department, whose history is a history of criminality from South America to Europe in the post-WWII order, published a communiqué in January 2006 that stated claims the United States ordered, supported, or authorized terrorism or stay-behind units, and US-sponsored "false flag" operations are rehashed former Soviet disinformation campaigns based on documents the Soviets forged.

gold () • In a historic rise unlike any previous period of time, gold's significance against the backdrop of the Ukraine war has emphasized the role currencies play in the struggle for great powers to become the world's only superpower. On February 1st, 2022, a troy ounce of gold cost 1797.91 dollars. On October 17th, 2025, the price for a troy ounce of gold surpassed 4,378.69 dollars, the highest in the precious metal's history. By January 21st, a troy ounce of gold rose to the price of 4,866.80 USD, a new historic high.

Sanctions, more than any other factor, has played the greatest role in the rise of gold. While many may claim Biden is responsible for the sanctions, Donald J Trump refused to terminate Biden's sanctions. The idea that Biden is responsible for the sanctions is thus only a half-truth.

The historic rise of gold spelled the beginning of the end for America's dollar. While the dollar's collapse is a complex process, perhaps even more complex than the causes for the Ukraine war, the beginning of the historic rise of gold preceded the urgent flight of capital from the United States to foreign bank accounts or the purchase of the precious metal.

On January 30th (Friday), 2026, the Federal government prompted JP Morgan Chase to initiate a major withdrawal of the market share in

---

[157] George Frideric Handel's biblical oratorio, Israel in Egypt (1739) or Giuseppe Verdi's Nabucco (1841).

[158] During the winter social media influencers with anonymous or non-individually identified accounts touted the idea that the Federal government would repay the Federal debt by manipulating cryptocurrency. The short sale on precious metals, however, wiped cryptocurrency out. The precious metals rebounded on fundamentals. Cryptocurrency trades at less than negative 4 percent return on investment without fees. There is no way the myth of cryptocurrency manipulation will save the Federal government's Federal debt. The more than 10 trillion in U.S. Treasuries the Federal Reserve believes debt holders will roll over into new treasuries with a higher yield not only won't happen, especially by law.

While money market funds, fixed-income investors, foreign countries, insurance companies, individuals, and corporations are legally required to hold short-term Treasury notes, a claim subject to dispute, the rollover is, nonetheless, expected exacerbate the crisis of the collapsed dollar, since 1) the dollar is no longer the world's reserve currency; gold surpassed the dollar in reserves, diminishing its role for reserve; 2) commodities contracts are increasingly being settled in currencies other than the dollar with the Chinese renimbi, Indian rupee, Russian rouble, and U.A.E dirham in heavy competition with the dollar; 3) central banks prefer to purchase gold over U.S. treasuries (i.e., India prefers gold over U.S. Treasuries). As PIMCO states, the shift in preferences "has profound implications. U.S. current account data shows equity inflows remain strong, while fixed income allocations grow increasingly selective. Central banks and institutional investors are reassessing dollar concentration, seeking alternatives that don't penalize prudent risk management." (December 31st, 2025) 4) While the preference to purchase gold over U.S. Treasury has profound implications, U.S. sanctions provide a positive economic incentive for countries like Russia and China to dump U.S. Treasuries; China, for instance, China has slashed its Treasury position by over 600 billion since the 2013. [TO DO] 5) Even worse than preference or dumps is China's gold to precipate volitility in a historic short sale.[158] On January 30th, 2026, no more than a few weeks before the fourth anniversary of Ukraine's war, gold rose to more than 5,600, exceeding nearly every single forecast major FOREX, currency, or stock market analysts assessed for the precious metal. At the outset of the rally, gold reached more than 5,600. On January 28th (Wednesday), gold came within 300 dollars from exceeding the Yardeni Group's prediction for the precious metal to reach 5,600 before the end of the year. Gold began moving in multiples. At the beginning of the week gold moved by roughly 100 every 24 to 48 hours, resiliently resisting the corrections speculators cause by trying to short sell. On January 27th, 2026, BMO published a report, claiming a "bullish scenario [for] gold at 8,650" dollars. The prediction went on to state how "[surging] momentum in gold and silver reflects a shifting order in the global marketplace, as uncertainty over the future of government balance heets and fiat currency resilience dominates investor sentiment, according to one Canadian bank..." This prediction, however, stood in contrast with the earlier predictions gold had already defied. Gold invalidated the following predictions: JPMorgan Chase: 5,055, up 16.45 percent, Charles Schwab: 5,055, up 16.45 percent; Bank of America: 5,000, up 15.18; ANZ Bank (Australia): 5,000, up 15.18 percent; Deutsche Bank: 4,950, up 14.03 percent; Goldman Sachs: 4,900, up 12.57 percent. Morgan Stanley: 4,800, up 10.57 percent; Standard Charter Bank (UK): 4,800, up 10.57 percent; Wells Fargo: 4,500 to 4,700, up 3.65 percent to 8.26 percent; more than 9 of the major Western financial analytics firms have fallen short by more than 200 to 700. Gold exceeded the Jefferies Group at: 6,600, up 52.04 percent and the Yardeni Group: 6,000, up 38.21 percent. What happened throughout the invalidation of predictions from market assessments major banks produced is that gold began to demonstrate resistance to speculation. The corrections are short, immediate, trivial. A comparison of prices from latter in the day at 5,179.70 USD to that earlier in the day 5, 202.20. 22.5 contrasts minimally with fees reduces the money a short seller might earn to a miniscule amount.Given the resistance to speculation, pressure continued mounting on supply, pushing gold up. By January 30th, gold had already exceeded nearly every one of the predictions major banks produced in an assessments.

By the morning of January 30th

---

active manipulation of U.S. Treasuries. China has begun to utilize U.S. Treasury to diversify economies within its spheres of influence away from the dollar to the Chinese[159], effectively forcing the U.S. monetary policy to try a taste of its own medicine. The U.S. has a six to nine months runway before the dollar dies. It has already collapsed in the sense in which the dollar existed prior to the 2008 financial crisis, whose ultimate expression terminates in the dollar's inevitable death. Gold has begun to move in multiples, dashing from 4600 to 5600 in less than a week; a JP Morgan Chase's failed State orchestrated short sale could not prevent gold from regaining 50 per cent of its lost value in less than a week. Physicists often talk about how time does not exist. If the measure by which time were to be evaluated switched from the sun to the dials, gauges, or indicators of the economy, physicists would be shocked by how times have changed. These quantities are leading to a change in quality. Hence these factors, all of which have come to a head in 2026, demonstrate that the mode of existence the dollar enjoyed prior to America's shift to a great power competitor with Chinese superpower, exists no longer. These five factors have not just profound but life-alterating consequences for the state of the American economy.

On the day JP Morgan Chase executed the failed State orchestrated short sale of precious metals, India's stock exchange surged. The financial ruling elites celebrated by transferring America's wealth directly away from the United States into hard assets in this country's stock market and others, robbing the American people blind. The majority of these hard assets are being transferred to the Indian stock exchange in a well designed scheme; the scheme allows the United States to sell India its crude, if not from the U.S. than from Venezuela, for hard assets or rupees, both of which serve as a hedge against the collapsed dollar. This is only one of the many schemes designed to thwart the inevitable loss of value the American dollar's death will cause at the end of its collapse.

(Friday), gold experienced the greatest single day of volatility, since 1983. In just one hour, gold lost approximately 3.2 trillion of its market value, equivalent to about 58 billion per minute, before a major recovery. Gold receovered 2.3 trillion almost immediately. The price restored to 4,900 or more.

The most pro-Western news agencies, many of which are Arabic, associated the fall in the price of gold with Donald J Trump's decision to nominate economist Kevin Warsh but the idea that the world would so enthusiastic about the Kevin Warsh's appointment to the chairman of the Federal Reserve belies the fundamentals in the global economy. Although designed to undermine the rally gold exhibited in the months leading up to the day, the Federal government's manipulation of the market for gold met with definitive limitations. Gold, for instance, overtook the U.S. dollar as the largest global reserve asset. While gold may drop temporarily, private central banks have not restored the practice of trading gold for U.S. treasuries but are insisting on the opposite: ditching U.S. treasuries for gold, a decision the Federal government's 40 trn debt dictates for monetary policy. Institutionalized short selling has not stopped gold. Resilience to short selling is a strong indicator that the gold rally is not a tulip bubble. It is a flight of Daedalus. It is the end of an era for the wax out of which fiat currency served to elevate ”independent” central bankers. Not only did the short sale fail; the short sail signified for all of Daedalus the end of the American financial ruling elite's control over the manipulation of the precious metals market.[160]

Orchestrated to coincide with several major events simultaneously, JP Morgan Chase's attempt to crash the market of precious metals through a short sale[161] followed the first showing of Melania Trump's film, the heavily redacted release of the Epstein files with images and videos[163], the shuttering of the Metropolitan Capital Bank & Trust in Chicago, Illinois, the preparations for an attack on Iran with airpower (See Baudrillard above), and Warsh's appointment. While rumours fly that soaring gold and silver prices caught major Western bullion banks like MCB&T off guard, fundamentals prevailed. Gold rose to 4, 900 dollars, restoring its losses within hours; the restoration returned gold to January 26th, 2026, indicating that gold managed to acquire the lost amount within hours; some accounts claim the three day gap represented an artifice; Chinese merchants displayed sales for gold at precisely the level at which JP Morgan Chase orchestrated its short sale. The fact that JP Morgan Chase's short sale did not crash gold destroyed the effect the coordination sought to project.

---

[160] [”Not for the first time, Chinese investors have emerged as a driving force in precious investment trends as gold and silver surge and then slump.” Bloomberg. February 6th, 2026.]

[161] After the JP Morgan Chase's failed Stated orchestrated short sale in the precious metals market, the precious metals rebounded almmost immediately. By February 3rd, 2026, gold returned to 5,000 or more dollars. The historic rally in the metals market turned the 2026 Winter Olympics into the most expensive game for medals in the history of mankind. Despite the January 29th, 2026 short sale, spot the rising prices for gold and silver set records for the melt value of the medals; the intrinsic metal value of the podium now stands are 2,250 ollars for the gold metal, 1, 350 for the silver metal, 5 and 45 cents for the bronze metal[162] With the total number of metals to be distributed, the more than 1, 146 medals cost more than 1 million 350 thousand dollars, the most any set of medals has ever cost the olympic games.

[163] The Epstein files apparently result from a historical analogue. The so-called Dutroux affair is the historical analogue. Survivors such as Anneke Lucas describe how the political, economic, or societal ruling elites raped children at masked balls like the ones in Stanley Kubrick's Eyes Wide Shut in corrupt scandals like the Dutroux affair. Modeled on the Dutroux affair, international child sex trafficking networks like Epstein's are a matter of course for the borderless lives of the rich and famous. It is indisputable that Epstein executed the supervision of an international child sex trafficking network with the permission of America's ruling elite, especially the police State bureaucracy such as the prosecutors, judges, or Courts.

Through the coordination of these events simultaneously, Trump sought to project an image of sinister control with a promise for the return of the halcyon days of quantitative easing, bailouts, security from the masses, or continued control over the fundamentals of the U.S. economy, just as the Federal government's response to the 2008 financial crisis provided. The disparity separating the promise from the provision, however, could not be farther from reality. The orchestration of the collapse of the Metropolitan Capital Bank & Trust in Chicago and other banks like MCB&T failed; the idea that a massive sell-off could trigger a lower threshold for these struggling banks to exit the market safely also began to collide with a harsh reality, as several banks already on the chopping block looked ripe for disintegration. Banks like Zions Bancorporation, Regions Financial, Citizens Financial Group, Valley National Bank, Synovus Bank, Umpqua Bank, Old National Bank, or Synchrony Bank[164]

Against the backdrop of rising gold's ability to withstand short selling at an amount of fluctuation equivalent to or exceeding more than 3.5 trillion dollars, Moscow stiffened its posture. Sergey Lavrov reiterated Moscow's demands for the Ukraine war's end. Vladimir Putin mentioned how the remaining Nord Stream pipe offers a competitiveness to Germany against China. With one out of eight of every car in Europe a Chinese import, the lack of European competitiveness seriously undermines its ability to leverage the strength of its economy against the rise of China's trade surplus. The Russians, especially Sergey Lavrov, know when to hold them, fold them or walk away. Accordingly, the Russians held their cards at the geopolitical table for poker on eastern Europe close to their vest in a reminder of the Kenny Roger's song called "The Gambler."

gold, white () • Gossypium, the wellspring from which any of several economically significant species, such as cotton, known as "white gold," flow. Widely cultivated for seed-hair fibers, cotton is one of the world's leading agricultural crops with a long history of us. A biodegradable fabric unlike microplastics, from which towels, t-shirts, or pants are frequently molded, organic cotton resonates at approximately 100 mHz (or Hz), which harmonizes with a healthy body's natural frequency.

During the fifth stage of in the steepest descent of America's superpower, corresponding approximately with the beginning of the Ukraine war, cotton's significant for the great power struggle in the global area rose significantly. A series of articles from leading newspapers around the world began to catalogue the features of its rising significance.[165]

---

[164] In a report "Data Analysis: Commercial Real Estate Troubles Threaten U.S. Banks," by Florida Atlantic University, published on March 10th, 2025 stated: "Of the 158 largest banks, 59 in the country are facing exposures to commercial real estate greater than 300 percent of their total equity capital, as reported in the fourth quarter 2024 regulatory data and shown by the U.S. Banks' Exposure to Risk from Commercial Real Estate screener." In an article entitled, "U.S. Banks' Exposure to Risk from Commercial Real Estate Screener," the Florida Atlantic University lists the 59 largest banks in a list with all 158 banks together with a ratio for exposure to risk from commercial real estate compared to equity. The problem equity, however, is that equity does not hold value when the stock market crashes because the currency in which a stock is valued losses its value. Equity is no comparison for hard assets like gold, property, or utilities like water, electricity, or garbage.

Gödel, Escher, Bach: An Eternal Golden Braid () • In his book from 1979, Professor Douglas R. Hofstadter claims ”animate beings can come out of inanimate matter,” claiming ”the key is not the stuff out of which brains are made, but the patterns that can come to exist inside of the stuff of a brain.”[166]

Goethe () • Le Traité des couleurs est un ouvrage de Johann Wolfgang Goethe (1749-1832) publié en 1810 en deux volumes.

Greenspan, Alan () • After the Fourth Anniversary of the Ukraine war, Alan Greenspan passed away. In 1966 Greenspan wrote an article about gold, marking the 60th anniversary from the date of its publication. Published under the title ”Gold and Economic Freedom,”[167] Greenspan converts his views enversa sed una on gold for fiat currency to create a playbook according to which fiat currency and economic enslavement could proceed from his legacy. In nearly every single one of his major conclusions, its conversion served as a lynchpin for the US Federal Reserve, an instrument for extracting surplus value nationally, internationally or globally, to manipulate the global economy. Greenspan, for instance, converts the following proposition: ” When gold is accepted as the medium of exchange by most or all nations, an unhampered free international gold standard serves to foster a world-wide division of labor and the broadest international trade.” The conversion is as follows: ”When gold is rejected as a the medium exchange by most or all nations, the enforced absence of an unhampered free international gold standard serves to subordinate a world-wide division of labor and the broadest international trade” to a hegemon’s global reserve currency. Accordingly, Greenspan’s article on gold, nearly every single provision of which Greenspan converts, subverts, or inverts to subordinate the interests of competing Bourgeoisie to those of the United States, is the central, defining, standardized understanding of his career. It is incomprehensible, however, to attribute to Greenspan any individual role whatsoever. In nearly all of the positions at the US Federal Reserve are refracted the objective forces of the US economy to an extent that none of the chairmen have ever or could have ever exercised personal volition. In the prism of the chairmanship the various colors of the American bourgeoisie are reflected according to the degree to which each’s property, power, or control over the means of production permit.

great powers () • In the years following the French Revolution in 1789, the regional European powers began to form nation-states with France, the most influential military power in Europe during the Napoleonic war, leading the way. Germany, in its

[167] Greenspan, who developed a friendship with the exceedingly ugly, Ayn Rand, published his article in her newsletter under the title, ”Objectivist” (1966). Greenspan reprinted the article in her book, Capitalism: The Unknown Ideal (1967). Rand’s books are absolutely useful for understanding Greenspan, the US Federal Reserve, or contemporary American capitalism. They’re more like science fiction novels published from the mouth of a mythological idealist without any relation to the world. About sleeping with her, Ayn Rand gave the following warning: ”Show me the person they sleep with and I will tell you their valuation of themselves. No matter what corruption they’re taught about the virtue of selflessness, sex is the most profoundly selfish of all acts, an act which they cannot perform for any motive but their own enjoyment — just try to think of performing it in a spirit of selfless charity! — an act which is not possible in self-abasement, only in self-exultation, only on the confidence of being desired and being worthy of desire.”

own right, evolved primarily from the Kingdom of Prussia into a unified nation-state through successive acquisitions from the time of Fredrick the Great to the end of the Paris Commune in 1871. In 1871 Germany finally defeated France. These two regional European powers, France and Germany, thus emerged from the Battle of Waterloo on June 18, 1815, the end of the Napoleonic Wars, to fight each other for dominance on the continent well past the 19th century. The Franco-Prussian War (1870-1871), which triggered a seismic shift in Europe's power dynamics. Germany's celebration of its unity in Versailles after the acquisition of the Alsace-Lorraine humiliated France, establishing Germany as Europe's strongest continental power, set the stage for the rivalry that drove these two nation-states to begin World War I in the 20th century. While during the 19th and 20th century a feature for distinguishing a nation-state from a great power became not only the possession of overseas colonies but a great naval fleet.

In the 21st century great power competition emerged among the most well armed nuclear powers for access to, control over or exploitation of trade routes, raw materials, rare earths or minerals, or currency, precious metals, or commodities. Countries such as the U.S., Russia, China, France, the United Kingdom, India, Pakistan, North Korea, Israel, and Belarus, whose status is a result of Russia's decision to share its own missiles with the country, remain the world's nuclear armed powers. Alongside these countries, a number of non-nuclear armed regional powers, however, began to earn the status of a great power through the lucrative arms trade. In the production of arms, munitions, infantry fighting vehicles, armored personnel carriers, tanks, howitzers, Panzerhaubitze, one way kamikaze aerial or oceanic drones, heavy weapons such as shoulder fired anti-tank surface-to-air missile, weapon systems, anti-air defense systems, fighters jets, corvettes, frigates, destroyers or air craft carriers, countries have begun to stratify the basis for power in region after region throughout the world.

Egypt, for instance, began to develop its defense industrial complex at an alarming rate before the fourth anniversary of the Ukraine war, demonstrating its ability to outclass its not only its Arab neighbors to the west but its Arabic speaking non-ethnically Arab neighbors to the southwest, south, or south east; Egypt's ability to engage in the arms trade at scale has begun to intensify its competition with neighboring powers in the Middle East such as Israel. While neither Egypt nor Israel are able to create fighter jets, Egypt's ability to create a frigate certainly provokes comparison with Israel's naval power, since Israel has a robust fleet with a history of excellence in shipbuilding but crucially without an example for an Israeli built frigate.

Before the third anniversary of the Ukraine war, Turkey, another non-nuclear armed nation-state, began to produce the TAI TF Kaan Stealth Fighter, its own fighter jet. Turkey is one of the few countries in the Mediterranean producing its own fleet.[168]

Groman, Vladimir Gustavovich () • Vladimir Gustavovich Groman (21 February, 1874 – 11 March, 1940), a self-taught statistician with exceptional ability, became the founder of Soviet planning after a long history of publishing penetrating analyses of statistics on a range of economic factors the Czarist, Russian or Soviet economy faced. What Lenin exemplified in leading a party, Deborin became to philosophy, Vel'tman to the study of the Middle East, Trotsky to world revolution, Groman became to the study of statistics, economics, or Soviet planning.[169]

---

[168] Türkiye exports its fleet. It delivered to Ukraine two Ada-class corvettes, the Hetman Ivan Mazepa on October 2nd, 2022 and the Hetman Ivan Vyhovskyi on August 1st, 2024. The nation-states capable of exporting units from its own fleet are stronger than those that cannot but produce new units for nothing more than their own fleet.

Little to no research has been conducted into the impact of Groman's work. It is alleged that on the basis of his works, the single most important of which is yet to be identified, Groman not only established the theory of equilibrium but developed the initial basis for the Soviet economy to plan the development of production for need rather than profit. Groman's contribution to the roaring 20s, a period of intense intellectual development leading to a phenomenal outgrowth in novel contributions across the arts and sciences, is unparalleled.

A few of Groman's works, many of which are extremely hard to surface from archives, are the following: Итоги и перспективы. Сборник статей: Вл. Громана, Поля Луи, П. Маслова, Л-га В. Меча, Ахмета Ца-ова, Г. Гейликмана, З. Ленского, Н. Гилина, Т. Бельского, Д-она. М. Типография торгового дома А. П. Печковский, П. А. Буланже и Ко. 1906г. LXIV, 500 с.: 2 л. табл., табл..[171] Groman's introduction to Rudolf Meerwarth's work (16. Juli 1883 in Karlsruhe - 9. März 1946 in Berlin) is on a level with or exceeding that of Ryazanov's own introduction to David Ricardo's Principles of political economy and taxation, indicating how a wide range of Russian specialists had begun to review economics in light of the October revolution. In contrast with the major, theoretical ударники, Groman's application of Marx theories to Meerwarth has apparently nothing to do with Lenin's or Trotsky's work. Unlike Pavlovich (i.e., Вельтман, Groman's attempt to frame an understanding of political economy with statistics stands slightly below the larger context of its political implications for the October revolution.

---

[169] It is unclear if or by which degree Groman's work on centralized planning has impacted China's successful development or its more than 15 five year plans. Groman's books, as opposed to many books Americans or Westerners have written on gold, haven't or do not appear to be translated into Chinese. It appears as though China's centralized planning has focused primarily on the development of a monteary policy designed by the nature of its plan to undermine the role America's dollar plans in global finance without much focus on the microeconomic factors of national planning. An example of the role translation plays is that a preponderance of English material on Zhukov, WWII or Russian warfare on the eastern Front appears in catalogues, whereas hardly any whatsoever relates to the Nazis training Chinese to fight the Japanese, although the trend, which followed much of the course of history after the "unipolar moment" to the fall of the Twin Towers or the 2008 Great Financial Crisis, has shifted substantially in the past few years with the Chinese now invested heavily in an analysis of Nazi training the Chinese to fight the Chinese, as recently released movies such as Shanghai: 1937 (i.e., November 1, 2018) indicate. Translation can indicate the degree to which a major shift in the consciousness of a foreign population acknowledges the importance of things written in a foreign language. The absence of Chinese translations for Groman or other Soviet economists from the 1920s may be one of the factors responsible for China's failure to address microeconomic issues such as falling consumer demand or equilibrium in the Chinese housing, property or real estate markets, a topic these ecnomists addressed in their work.

[170] The title, Итоги и перспективы, is exactly the same title, L. D. Trotsky chose for his groundbreaking work into the Permanent Revolution. Is there a correlation?

Information for a full biography exists, although a few of the sources may be almost inaccessible. A Siberian periodical, for instance, Жизнь Сибири, is extremely difficult to obtain. Information on Groman, for instance, may be found in that journal (i.e., Жизнь Сибири. Ежемесячный журнал политики, экономики и краеведения. № 4, апрель, 1931 Новосибирск Изд. Запсибкрайисполкома 1931г. 89 с. from an article published under the title, Сибирская Громановщина by И.Штерн where the author denounces Groman for his affinity with the «Союзного бюро ЦК РСДРП (меньшевиков)».[172] An examination of the show trial to which Stalin subjected Groman to a reprisal appears in Вадим Роговин's first book, Власть и Оппозиции in Chapter XXV under the title, Расправа с беспартийной интеллегенцией (pg. 196). Роговин identifies Groman's reprisal as the third in a group of arrested specialists. His group consisted of "бывших меньшевиков, работавщих в хозяйственных и научных учреждениях, where Groman's name appears first in a list with both Суханов as well as Базаров, both important in their own right but incomparable with Groman for lack of publication. Роговин demonstrates how Stalin weaponized the three fictitious parties, both of which he described as not only underground but anti-Soviet, against criminal defendants like Groman. These parties were «Промпартия», «Трудовая Крестьянская Партия», «Трудовая Крестьянская Партия» or the «Союзного бюро ЦК РСДРП (меньшевиков)», the entire lot of which Stalin exploited to sully Soviet specialist like Groman. Groman's picture is in Роговин's book on page 199.[173] An exceptionally well written, short, brief biography on Groman's life may be found in a hardly read but unbelievably important book: Jasny, Naum. Soviet Economists of the Twenties: Names to be Remembered. Cambridge: Cambridge University Press. (1972). Jasny's biography starts from Part III "The Economists" in his book with the chapter "Vladimir Gustavovich Groman" (pp. 89-122).[174] Jasny's account is a first hand account. Groman's involvement in the 1905 revolution is a major lacuna in the research on his life. It is unclear from any source or writing what role Groman, at what time or in which organization (as the number, significance, or role of organizations during the 1905 revolution abound), played or how his involvement related back to his work. Jasny's biographical essay contains a number of Groman's works but does not contain a complete list (a major lacuna). It is exceedingly difficult to discern, find, locate, or obtain a complete list of Groman's works, although an initial attempt is mentioned above. A victim of Stalin's political genocide,[175] Groman at first served his ten year sentence (the highest before execution in the years before Kirov's assassination on December 1st, 1934) in the Верхнеуральский политизолятор before being transferred to the Суздальский ИТЛ (Исправительно-трудовой лагерь) where he died shortly before completing his sentence on March 11th, 1940.

---

[171] Apparently, Groman wrote the following works but these works are listed in biographies without details. О применении типического метода к текущей статистике, О некоторых очередных задачах земской статистики, К аграрной программе Российской социал-демократии, Методология генерального плана, Результаты работы комиссии Госплана по проверке данных об элементах сельскохозяйственного производства. Additional research is required to develop a comprehensive list of detailed information on Groman's full list of publications.

[172] О роли В. Г. Громана в процессе «Союзного бюро ЦК РСДРП(м)» (см. версию М. П. Якубовича в письме Генеральному Прокурору СССР о процессе меньшевиков в 1931 г. от 5 мая 1967).

Amy Goodman () • In her 30 years on air, Amy Goodman, a veteran US independent journalist, marked her anniversary during the Fourth Anniversary of Ukraine's war. 'Democracy Now!' is now the subject of a new documentary called 'Steal This Story, Please!' Goodman's news channel featured numerous fascinating interviews with Noam Chomsky.

Greene, Robert () • Robert Greene, whose books America's corporate, agentic controlled newspapers like the New York Times, is one of the greatest American sophists to say almost nothing at all about the global capitalist crisis, the most direct reflection of which is the Ukraine war. Isn't Robert Greene's book on the 48 laws of power capable of providing an intelligence agent with a view into the power relations separating Russia from the U.S.-led NATO alliance in Ukraine? Is the Ukraine capable of being explained by any of Greene's laws? If so, which laws explain the Ukraine war from beginning to end. While women in search of a new way to boost their lucrative image[176] hit the gym after reading his self-help book, the book is unsurprisingly absent from analyses on the Ukraine war. A wide spectrum of commentators, analysts, agents, researchers have reported on the Ukraine war; many have reported time and time again without reference to any of Greene's laws; many have reported time and time again on blogs, Telegram channels, in newspapers, or in books but few to any at all have ever thought to deprive the underlying causes of the Ukraine war from an application of Greene's laws. It is almost as though Green's book, celebrated on Instagram by scantly clad women the world over, is irrelevant for the politics of the 21st century. How could such an influential book influence the analyses of the Ukraine war so little? Is it mere coincidence? Is it causality? In what lies the irrelevance of Greene's 48 laws of power? How are Greene's 48 laws of power irrelevant for what is the central, defining, most historically encompassing, greatest political, economic, societal event in the history of the 21st century? The outcome of the Ukraine war decides not only one of the four primary unresolved post-Soviet conflicts in the ever collapsing breakdown of the U.S.S.R. (i.e., in countries such as Transnistria, Nagorno-Karabakh, or Georgia) but the fate of the future of the future redivision of the collapsed Ottoman Empire. Its importance for the United States, Europe, the Middle East, Africa, Russia or Eurasia simply cannot be underestimated.

---

[173] Frederick Choate's translation (2019), the only English translation for Роговин's works, begins on page 257.

[174] Jasny's discussion of Groman's Stalinist show trial is far more detailed than Роговин's. It is unclear why Роговин's discussion lacks the detail Jasny's chapter provides, as Роговин began his project after the collapse of the Soviet Union when access to Western sources of information on Russian history confronted no Soviet restrictions. Роговин's books contain quite a few Western sources of information on Russian history. Given the enormity of the history historians like Роговин confronted, Роговин might well have prioritized Soviet archival material over or else had been so overwhelmed that he could hardly individual stories to the extent the Stalinist purges required.

[175] The Federal Bureau of Investigation continues Stalin's political genocide today with the imposition of a "final solution" on labor through the deployment of organizations such as the Socialist Equality Party under the auspices of David Green (aka David North).

[176] Even women at the age of 62 are profiting from boosts to their lucrative image on Instagram.

Greenland () • Based on all the information surrounding Greenland, President Donald J Trump's call to annex the country, which began during the third anniversary of Ukraine's war, served a global conspiracy for providing a pseudo diplomatic basis for European countries such as Germany to station troops there for exploitation of the Antarctic. Antarctic became the subject of ”the ceaseless struggle for new and ever new fields of capitalist exploitation, which must be obtained from one and the same source, the earth.” [Trotsky, Leon. The Bolsheviki and World Peace. Boni and Liveright: New York. 1918]

gum Arabic () • Sudan is historically one of the top producers of gum Arabic, a pink resin many companies exploit for Coca-Cola, M&Ms, makeup, or pills. After the resin from the gum Arabic trees is exposed to air under sunlight, the nodules pulled from exposed stems hardens into a light pink ball known locally as ”ka'akool.” The gum Arabic tree alone is one of Sudan's most important resources. On average a single gum Arabic tree produces around two pounds of gum Arabic.

The gum Arabic trade earned Sudan 183 million in 2022 in a way that benefits nearly 5 million people. Since the second anniversary of the Ukraine war (2023), Sudan has witnessed a resumption of civil war. The civil war displaced more than an estimated 14 million people, among which are Sudan's ka'akool farmers. Warring parties have engaged in rampant deforestation, wiping out acres of acacia trees. The war, which became most intense in Kordofan, the central Sudanese region that forms the heart of the ”gum Arabic belt,” a verdant strip of acacia trees stretching across the country. In 2025, Kordofan became the site of major clashes between the warring parties with devastating

---

[177] Kordofan became the center of attention in the Arabic media during the third anniversary of the Ukraine war in terms of its significance for unmanned air superiority in a conflict in Africa. Whereas unmanned air superiority became significant on the Eurasian continent on several of its plateaus such as in Pontic steppes, the Levant, the Caucasus, or the Persian Gulf, the battle over Kordofan represented the first attempt to establish unmanned air superiority in Africa. ”On September 13, 2025, Rapid Support Forces air defences claimed their third Baykar Bayraktar Akıncı high-altitude long-endurance unmanned combat aerial vehicle over Al Khoei town in West Kordofan, a region previously spared the intensity of Darfur's clashes.” [”من الخرطوم إلى كردفان تعرف على الواقع الميداني في السودان.” Al-Arabiya. September 26th, 2026] Evidence at the time, however, suggested that the third downed Akıncı had not significantly affected the Sudanese Armed Forces' ability to continue its advance for the SAF's capture of Bara, a major setback for RSF, secured the vital road connecting the Sudanese capital to Khartoum and a state north of Kordofan. The downed drone, about which Al-Arabiya makes no mention in a subsequent report, had not affected the SAF's control of this critical line of communication. [”بعد معارك عنيفة.. الجيش السوداني يستعيد مدينة بارا شمال كردفان.” Al-Arabiya. September 30th, 2026.] The report, for instance, stated: ”كما تعني السيطرة على بارا تقليص مسافة نقل الإمدادات العسكرية واحتياجات الجيش وعناصره من الخرطوم إلى كردفان حيث مسرح العمليات الأعنف خلال هذه المرحلة.” It is one-side to follow an air war only from the perspective of a single combatant's air defenses against its opponents' drones. The battlefield is far more complex. In Sudan especially the drone warfare is dynamic with SAF striking RSF's drones, just as RSF does SAF's. It does not appear as

consequences for Sudan's gum Arabic trade.[177] Sudan's exports to the U.S. dropped significantly. Between January and May 2025, Chad shipped 1,045 tonnes of gum Arabic to the United States, an 81

A report by the United Nations Panel of Experts on the Sudan established pursuant to Security Council Resolution 1591 (2005) demonstrated that the Rapid Support Forces (RSF) exploited the gum Arabic trade. In particular, the report documented the onward transport of looted gum Arabic through routes leading to Chad, the Central African Republic and South Sudan. The Panel also found that widespread looting of gum Arabic by the RSF was used as a form of compensation for fighters in the absence of salaries, and that at least 3,700 tons were looted between January and June 2024, which indicates that the RSF exploited parts of the gum Arabic value chain to sustain its operations directly.

May became a seminal month for the RSF. On May 2nd, 2025, the RSF raze Afritec's store of gum Arabic from the west Kordofan town of al-Nahud after the SAF withdrew. RSF militiamen looted the company's warehouses in Al-Nahud, taking 3,000 tons of gum, along with trucks, tractors and even generators. Other manufacturers in Al-Nahud weren't spared, either; more than 125 million worth of gum was estimated to have been taken. The militia men also looted lorries containing around 10,000 tonnes of gum Arabic worth tens of millions of dollars. More than 400 vehicles held the 10,000 tonnes. United Nations experts reportedly claimed that between January and June 2024 UAE-aligned RSF militiamen looted more than 14.6m worth of gum Arabic. It is estimated that between 50,000 to 70,000 tonnes passed from the looters' hands into Chad alone in 2024.

Alongside looting, the RSF has been accused of widespread sexual assault, looting, torture and the summary execution of civilians. Amnesty International published a report in 2024 week describing how the RSF inflicted widespread sexual violence on both women as well as girls, including rape, gang rape and sexual slavery, much like the sexual slavery into which members of ISIS sold female Yazidi slaves. Amnesty's report documented sexual violence against 36 women and girls - some as young as 15 - between April 2023 and October 2024. The Raoul Wallenberg Centre, which investigated crimes against the Masalit community, found "clear and convincing evidence" that the U.A.E.-aligned RSF and its allied militias "committed and are committing genocide against the Masalit."[178]

H

---

though the RSF has a 'drone strategy,' like the drone strategy the Azerbaijani forces deployed against Armenia in the Nagorno-Karabakh war. [Hecht, Eado. "Drones in the Nagorno-Karabakh War: Analyzing the Data." Military Strategy Magazine, vol. 7, no. 4, winter 2022, pp. 31–37, doi:10.64148/msm.v7i4.5] In the Nagorno-Karabakh War, Azerbaijan employed Turkish drones to great effect, especially against Armenian air defenses. If the SAF's drones are identical to those Azerbaijan deployed against Armenia, then the RSF's lack of a strategy against Akıncı drones may be rooted in a failure to analyze the Nagorno-Karabakh war where unmanned air superiority enabled ground forces. In terms of a war comparison, RSF has no drone strategy for affecting developments on the ground where the SAF have succeeded with its expanse, reclaiming territory critical to the war's decision.

[178] ["How U.A.E. Arms Bolstered a Sudanese Militia Accused of Genocide," The Wall Street Journal. October 29th, 2025]

Haftar, Khalifa () • After the Libyan civil war the tribalist klansman, Khalifa Haftar, became one of Africa’s most experienced generals.

Haggadah () • The ultimate Haggadah for passover, Moyshe Altshuler’s Haggadah for Believers and Heretics celebrates Passover with a Yiddish text from Russia’s roaring 1920s that transforms the Exodus narrative into a revolutionary parable, rejecting nationalism and Zionism in favor of solidarity with all oppressed peoples. Originally published in 1927—the year Stalin exiled Trotsky—under the auspices of the Soviet Commissariat for Nationalities, Altshuler’s text lines up with the cultural, historical, intellectual exuberance of the nascent workers’ state.

Described as essential reading for “anti-Zionists” where the nationalism of a single nation is singled out, the book is really for anyone who is skeptical about the origins, viability, or future of the political form of nation and state and is aware of the profound changes in the nature, design, or borders of States over the past 300 years; the term “anti-Zionist” is a subspecies of “anti-nationalist” but being opposed to the reality of the national and political State is far in a way different from a commitment to the belief that there is a world beyond nationalism, beyond borders, beyond these political forms of nation and state that now compose the backdrop of a rivalry usurping resources, time, or energy on what might otherwise be better spent on space, exploration or science.

Hatzadek, Shimon () •

HAMP () •

Hegel, Georg Wilhelm Friedrich () • Hegel set out the beginning of philosophy when he said: ”Wenn man anfängt zu philosophieren, so muß man zuerst Spinozist sein. Die Seele muß sich baden in diesem Äther der einen Substanz, in der alles, was man für wahr gehalten hat, untergegangen ist. Es ist diese Negation alles Besonderen, zu der jeder Philosoph gekommen sein muß; es ist die Befreiung des Geistes und seine absolute Grundlage.” [179]

Helvétius, Claude Adrien () • Claude Adrien Helvétius (1715), a leading French Enlightenment philosopher celebrated the 310th anniversary of his birth during the third anniversary of the Ukraine war. ”He was not merely a materialist; he was the most ‘consistent’ of his contemporaries in his adherence to the fundamental idea in materialism. He was so ’consistent’ that he horrified the other materialists.”

Hofmannsthal, Hugo von () • Hofmannsthal’s famous remark from his book, Der Dichter und diese Zeit (1905) marked its 120th anniversary during the third anniversary of the Ukraine war with a stunning contemporary relevance for the present. Hofmannsthal wrote: ”Aber das Wesen unserer Epoche ist Vieldeutigkeit und Unbestimmtheit. Sie kann nur auf Gleitendem ausruhen und ist sich bewußt, daß es Gleitendes ist, wo andere Generationen an das Feste glaubten.” Hofmannsthal’s famous remark rested on a single phrase, auf Gleitendem. The 21st century develops almost exclusively auf Gleitendem where America’s lost hegemony at the battle of Bakhmut-Artemovsk gave way to a profoundly varied multipolarity manifested in so many different ways that one can hardly believe the astounding revelations signaling the beginning of a new, ever shifting, changing world order.

Huberman, Andrew D. () • A

---

[179] Hegel, Vorlesungen über die Geschichte der Philosophie III, 165.

[180] Huberman has yet to relate his intellectual journey through the most important advances in the state of art on psychology with those in the history of ideas. Huberman, for instance, has not addressed the philosophical underpinnings of the advice he popularizes, even though many of the ideas he espouses point to a single man: Spinoza. The next step in his popularization of neuroscience shall inevitably bring his work closer to that of António Damásio. Damásio has linked the discoveries in neuroscience to the understanding of mind from the 17th century. Damásio dissolves the separation of emotions from reasons into the Spinozistic aspects of a single

great messiah for men over the age of forty, Andrew D. Huberman[180] is one of the few Americans contributing to the popularization for cognitive neuroscience from the point of view of a practice (rather than merely a theory for experiments or academic papers). In the coming years, Huberman's and Paul Saladino's advice on health and wellness will be the touchstones for American, if not global, health.

Huning, Wang () • At the moment the unipolar moment glistened off the Stars and Stripes of America's global hegemony, a short, Chinese man with glasses toured America. The result became one of the most important works for China's understanding of America. In his book, which Gideon Rachman[181] both praised as well as criticized, America against America, Huning made a number of exceptionally prescient observations about the United States of America.

In his deployment of the word "surplus value," Huning, however, does not draw the necessary conclusions about the role of the US Federal Reserve, the US dollar, or its status as a global reserve currency. Huning mentions "surplus value" twice in his book. The first instance is in his preface. He writes how inn the old days, when people started from a dogmatic view, they, who he does not mention, "America as a mere "exploitation of surplus value," a "dictatorship of the bourgeoisie," and nothing more. It is only later that Huning associates the extraction of surplus value with a process. In Chapter (IV) "Multi-Level Social Regulation," Huning's formulation at the time makes no mention of the underlying "mechanisms, methods and techniques to manage" the extraction of surplus value related to the US Federal Reserve, the US dollar, or its status as a global reserve currency.

The primary reason that Huning could not formulate a higher level of consciousness on the extraction of surplus value is that Huning refuse to acknowledge the role of the permanent revolution. The entirety of the 20th century is based on an adoption of the permanent revolution. Woodrow Wilson's adoption of the permanent revolution is evident in his establishment of the US Federal Reserve. A Trotskyist anti-Communist, Wilson, who not only sought to subject the world to a global order under the League of Nations, but sought to subordinate the world to the US dollar without a gold standard. Had Huning read Trotsky's works, Huning likely could have predicted the role the permanent revolution in private central banking accomplished during the 20th century. The permanent revolution in private central banking spread fiat currency throughout Europe with speculation reaching its ultimate limits only after the beginning of the Fourth Anniversary of the Ukraine war with an innumerable number of bubbles ready to burst.

Huning Wang, variously described as "China's crown theorist" and as Xi Jinping's "ideological tsar," is not only an influential thinker in the Chinese intellectual milieu. He is "one of just seven members of the Politburo Standing Committee of the Chinese Communist party, one of the most powerful people in China."[182] Huning's failure to apply a Trotsky to his ideas of a Leninist analysis on America is critical turning point. In the termination of the fifth stage of its declining superpower, America's steepening descent coincides with China's own rise. It is no accident that at the moment of the unipolar moment the thinking of the Chinese Communist Party's Politburo is encapsulated in a succinct book but its failures indicate that a new period in Chinese thinking is underway. Coinciding with a rise in China's preeminence, the objective social forces of its

---

substance, both of which both originally stem from but ultimately relate back to a single origin.

[181] Gideon Rachman penned a review in 2025. See ["China's vision of America," Financial Times. August 15th, 2025]

[182] See above.

global hegemony will come to bear on China's understanding of communism and the world. It is clear that the next phase of Chinese intellectual development may continue in one or more ways. One way may be a renaissance of the 1920s in the Soviet Union,[183]. unleashing the beginning of an examination of the contradictions inherent in China's suppression of Marxist orthodoxy or else an embrace of private central bankers in a way much like the United States with its establishment of a Chinese Federal Reserve designed to exploit Renminbi in the way the US exploited the dollar, allowing finance capital to repudiate Marxism with the subordination of all other social forces in Chinese society to its dictates.

Métal Hurlant () •

Hao, Karen () • Karen Hao is morę than likely a contractor for one or more of America's Federal agencies with the most likely one being the CIA. Hao wrote a book called, Empire of AI. Designed to gaslight Sam Altman at OpenAI (whose contribution cannot really be distinguished from Elon Musk's direction over the company), Hao's central thesis is the following: "This idea that we can replicate human intelligence is pegged to the idea that we understand human intelligence–but there's actually no scientific consensus on what that even means." Hao's thesis is exceptionally flawed. There is no requirement in human history that a person understand fully the thing he or she seeks to create; since Artificial General Intelligence is distinctively not human intelligence but a new kind of intelligence, there is no reason to believe her thesis applies, ipso facto, to deny its creation. The telephone, for instance, is one of the inventions likely no one understood before its creation but this lack of understanding is perhaps what motivated its creation, if not its further development. More importantly, fewer people still understood the telephone after its further development led to its recreation from PSTN (Public Switched Telephone Network), PSDN (Public Switched Data Network), or ISDN (Integrated Services Digital Network). Hao's thesis is therefore inapplicable.[184]

I

ILPM 2018 () •

In Pasco county, Florida, the Institute for Justice successfully sued the Pasco County Sheriff's Office for its deployment of predicative policing.[185] The Pasco County Sheriff's Office implemented a data-driven initiative known as the "Prolific Offender Program." This system utilized computer algorithms to analyze data and identify individuals the Office believed were likely to commit crimes in the future; the program's goal was to utilize AI data driven tools to reduce property crimes by focusing law enforcement resources on these designated individuals. The range of data included a person's criminal history, his or social connections derived from an analysis of telephony metadata, social media such as Facebook, Instagram, LinkedIn, Tinder, or other social media platforms, civil Court records, or information from police reports, true or false, to prompt AI for predictions.[186]

---

[183] Деборин, Абрам Моисеевич (1881-1963). / . — : = [The Oriental Book Company], [1929]. — 10, 156 . : 19 — ( )

[184] Human invention is often accidental. In Stanley Kubrick's 2001: A Space Odyssey (1968) an epic scene from film portrays how monkeys transform a femur bone into a club against the backdrop of Richard Strauss's rendition of Also sprach Zarathustra, demonstrating how an accident in the invention of human tools can lead to a sudden transformation in the inventors. It means that human beings do not necessarily even need to know exactly what they are inventing when they are inventing it so long as they are able to cope with the consequences of the power it wields. The point of invention, however, is not cognition but development, a sudden transformation from one stage to another new, higher, more powerful stage. It therefore requires no prerequisite cognition, let alone a premonition.

[185] ["Florida sheriff's department creates intelligence-led police program to monitor and harass residents," WSWS. September 8th, 2020], ["Florida Sheriff's Office intelligence-gathering program labels student youth as future criminals," WSWS. November 23rd, 2020]

Based on Jerry Ratcliffe's book, Intelligence-led Policing (2016), the Pasco County Sheriff's Office's manual called The Intelligence Led Policing Manual, abbreviated as ILPM 2018, describes the process by which the Office employs algorithms, AI, and data to deprive citizens of basic, human, civil, and Constitutional rights such as the First, Fourth, and Fourteenth Amendment rights, with computer software. The aim of the program is not to prevent crime but to enforce upon people suspected of future criminal activity a deprivation of rights. Statistically, the program did not result in safer communities with fewer crimes, as the police State bureaucracy induce, commit a great deal or procure a high number of the crimes in a community. The manual is the first manual in the history of the United States to introduce into a local enforcement the idea of intelligence from the perspective of espionage, spy-craft or State secrets where data collection and analysis is churned for insights in a model where the police view fellow citizens as a enemies just like a State views foreign citizens of a target country as enemies.

Crucial to the pivot is September 11th, 2001 where President George Bush oversaw an internal false flag operation, signaling the crescendo in the fourth period of America's declining superpower (when the Federal debt began to increase in multiples year over year). Repeated in the manual is the theory of "information silos" (i.e., where neither the CIA nor the FBI coordinated activities so the greatest "terrorist" attack on American soil slipped through the cracks)[187] when the manual describes how "the tragic events on 9/11" called "for US law enforcement agencies at all levels to increased information and intelligence sharing. The central program with the manual is the central problem of Ratcliffe's book. Ratcliffe is not interested in an analysis of the root cause of criminal activity, the vast majority of which the highest levels of government perpetuate (i.e., institutionalized bribery, money laundering, or quid pro quo schemes), but in a model so efficient for its management that the status quo ante may be sustained.[188] It is a stoic response to the crescendo in the fourth period of America's decline where constraints on budgets compel the adoption of a less costly type of management. The Roman legionnaire tightens his cingulum militare. The waist, however, can only condense so much. Ultimately, the result is a shift in focus. The shift is from the prevention of crime to a focus on "criminals." The manual states: " if our criminal justice system is struggling to deal with the 4 people at the bottom of the crime funnel, wouldn't it be more prudent for us to identify and ensure we go after the right four people for those spots?" Since the manual does not focus on an analysis of the root cause of crime, the remedy has absolutely nothing to do with a solution.[189] The isolation of individuals thus has no impact on crime, since crime results primarily from economic depravity. Ratcliffe's project is a failure.[190]

[187] In the era of the algorithmic revolution where communication is instantaneous, the idea that neither the CIA nor the FBI coordinated activities on for identifying, investigating, or tracking the individuals involved in the September 11th, 2001 terrorist attack lacks credibility. If so, the fact that the U.S. has so many different layers in its vast police State bureaucracy is more the reason for their dissolution than a justification for failure.

---

[188] Ratcliffe's crime funnel is agnostic. It does not differentiate crimes or criminal activity. Bribery, money laundering, or quid pro quo schemes, so popular in Washington, D.C., for instance, are hardly comparable to the most frequently occurring crimes like jaywalking. Ratcliffe does not understand crime because he does not understand law. Law falls under multiple definitions but the most commonly associated aim of law is the common good (as Thomas Aquinas (1225-1274) pointed out in the (Summa Theologiae (I-II; qq. 90-97) more than 800 years ago). In many cases the laws are either contrary to the common good are designed in a such way that discerning whether or not they apply to the common good becomes impossible. Is a ban against fireworks on July 4th an ordinance of reason ordained by he who is charge of the community for the common good? Are these question raised? At least these questions do not enter Ratcliffe's mind.

A problem Aquinas did not address is the scope and scale of laws. The unsustainable exponential rate of growth in the U.S. legal framework recommends its revision. Less than a century ago, all Federal laws fit into a single volume, while now they span 54 volumes in no fewere than 60,000 pages. A series of books over time addressed the exponential growth of the U.S. legal framework. Manning's Hyperlexis: Law and Disorder (1970), Dworkin's Law's Empire (1986), Howard's The Death of Common Sense (1994), Carrington's The Rule of Lawyers (1995), Cramton's Too Much Law? (2007) have pointed out that America has too many laws that are too complex. Entitled, Over Ruled: The Human Toll of Too Much Law, Niel Gorsuch draws together these previous contributions to demonstrate how has begun to destroy the foundations of its democracy with codified overthinking, eliminating common sense, judgement, or plain and simple cognitive, logical, sensible analysis. ["America Has Too Many Laws," The Atlantic. August 5th, 2024], [" Have you committed a felony yet? Probably so." The Washington Post. August 30th, 2024] A jewel on the crown of the critique of America's codified overthinking, Gorsuch's contribution has had surprisingly little to no impact on legislation, prosecution or the Courts. It is as though their recommendations are so much "dust in the wind." These concerns on law demonstrate how in nearly all spheres of American life, law least of all, the tendency of development is towards self-destruction to a "Point of Know Return."

[189] The manual even quotes the root cause of criminal activity: "David Farrington has pointed out that our knowledge of offending patterns is such that potential offenders can be identified at an early age with a reasonable degree of accuracy' (1990: 105-106). He estimated that the best predictors in 10-year-olds of having a criminal conviction later in life are socio-economic deprivation, antisocial parents and siblings, poor parental supervision and child rearing, coming from broken homes, low intelligence and a poor school record. However, many of these variables are unlikely to be available to police departments, so this information has little value from an intelligence-led policing perspective. (Ratcliffe, 2016: 44)" Despite acknowledging the root cause of criminal activity in economic depravity, the manual insist on a remedy without any relation to a solution for economic depravity.

[190] Described as sounding like a pitch for a Hollywood blockbuster such as Moneyball meets Minority Report, two cities, two of the largest in the country, abandoned algorithmic, AI, data driven approaches. In 2018 the Los Angeles Police Department discontinued an algorithmic, AI, data driven policy for policing before the Department's Inspector General found that half of the 637 people in the data had one or no violent-crime arrests. [" Review of Selected Los Angeles Police Department Data-Driven Policing Strategies," Los Angeles Police Commission. Office of the Inspector Genera March 12th, 2019], ["LAPD ends another data-driven crime program touted to target violent offenders," Los Angeles Times. April 12th, 2019] The Chicago Police Department had its own system to identify people with algorithms, AI, or data but for people likely to be involved in a shooting. Chicago terminated the program in 2019. In 2020 the city Inspector General found the Chicago's program unfair on the basis of inaccurate data. ["Advisory Concerning the Chicago Police Department's Predictive Risk Models," Office of Inspector General for the Chicago Police Department. January 23rd, 2020], ["

Declaring the practice unconstitutional in terms of the First, Fourth and Fourteenth Amendment rights on December 3rd, 2024, a Federal court ordered the Pasco County Sheriff, Chris Nocco, from Pasco, Florida, to discontinue "absolutely and unambiguously the process of designating penons as prolific offenders," effectivelly terminating the algorithmic, AI, data driven law enforcement tool. Designated Dalanea Taylor, Tammy Heilaman, Darlene Deegan, and Robert A Jones III v. Chris Nocco" in the United States District Court of the Middle District of Florida, Tampa Division, under case number 8:21-cv-00555-SDM-CPT, the settlement remains open so that the Court may enforce further the categorical ban on the use of dystopian law enforcement tools in general.

Alongside the rise in the use of algorithms, AI, or data to subject citizens to deprivations of First, Fourth, and Fourteenth Amendment rights, the use of technology is driving a rise in the number, type, or manner of pretextual stops. On March 22nd, 2022 a Fusion Data Center, which collates data on the truck, truck's license plate, insurance, driver, driver's license, driver's bank account information, the places where Flock-style license plate scanners spotted the truck or plate scanning devices for tolls, decried that a truck driver's trip is suspicious. The Fusion Data Center immediately dispatched an officer to interdict the truck driver on the "suspicious" trip. On March 16, 2022, The Bexar County Sheriff, which made no objection to its deployment for the sake of a pretextual stop without probable cause for the underlying request, pursued the "suspect." After observing the truck driver proceed down I-35 at the highway's designated speed limit without incidence, the sheriff alleged that a truck driver swerved over the yellow line. The officer's dash cam footage, however, demonstrated that the truck driver had not crossed over the line. Despite the Sheriff's false testimony (which is illegal), the officer proceeded to utilize his false testimony to subject the driver, Alek Schott, to Fusion Data Center's pretextual stop the anyway. The officer pulled the truck driver over, subjecting him to multiple violations of the law. The incident demonstrates not only the illegality of "pretextual stops" but the role algorithms, AI, or data play in the burgeoning police State bureaucracy's expansion of anti-Constitutional powers designed to deprive citizens of basic, human, civil, Constitutional rights systematically.

In a series of articles published by the Lincoln Journal Star, the newspaper exposes how the Department of Homeland Security, whose integrated systems for identifying, tracking, or indicting individuals subject to politically motivated investigations include such algorithmic, AI or data driven platforms of the ominous Palantir, engages in pretextual stops systematically.[191] The Seward County Sheriff's Office, which made no objection to its deployment for the sake of a pretextual stop without probable cause for the underlying request, has deployed the tactic of Whren[192] stops extensively for civil asset forfeitures, particularly along a 24 mile long stretch of historic Interstate 80, where the SCSO has seized millions of dollars from motorists without an exception

---

For years Chicago police rated the risk of tens of thousands being caught up in violence. That controversial effort has quietly been ended." Chicago Tribune. January 25th, 2020.] The reports these Inspector Generals published demonstrate how operationalized placement of people in databases for policing leads inevitably to basic, human, civil, Constitutional violations.

[191] ["Loophole lets Seward County seize millions from motorists without convicting them of crimes," Lincoln Journal Star. June 24, 2023], ["Forfeiture," Lincoln Journal Star. June 25th, 2023], ["Lawmaker seeks to ban practice allowing Seward County, others, to seize millions from motorists," Lincoln Journal Star February 4th, 2024]

[192]

to the Fourth Amendment or due process. In a way similar to Bexar County Sheriffs in Texas, the SCSO relies on false testimony to concoct “probable cause” for pretextual stops on vehicles the DHS’ fusion data center have believe may have cash.[193] The excuses for “probable cause” cover a wide range of differentiate pretexts. These are: ‘following too closely,’ ’dim headlights,’ ’lane changes,’ ’tailgating,’ ’width of license plate frame’, “no turn signal,” “driving with phone,” etc... Based on the data, there is no question that the DHS’s deployment of the SCSO is a Federal conspiracy to deprive motorists of basic, human, civil, Constitutional rights. In Seward County, the population is 17, 962 people; more than a third of all cases of this kind in Nebraska originate from Seward County. Seward county has accumulated more than 7.5 million dollars in forfeited cash in the past five years. During that time, the SCSO bought stun guns and bulletproof vests “ Seward and Milford Police Departments, a sheriff’s cruiser and an 18,000 drone for the Nebraska State Patrol. It recently spent 15,000 on two ballistic shields after the school shooting in Uvalde, Texas.” It is clear that the money SCSO acquired serves no purpose than to ingratiate the office. While the newspaper published these articles well before Palantir announced the beginning of its integration with the Department of Homeland Security for deploying Immigration Customs and Emigration officers to Minneapolis, Minnesota, readers can easily infer from the newspaper’s reporting how only an algorithmic, AI, data driven program like a Fusion Data Center could be behind the selection of Seward County’s targets in Nebraska.

Institute for the Study of War () • The Institute for the Study of War (ISW) has consistently maintained that Ukraine may become victorious only after restoring maneuver to the battlefield.

The ISW, one of the social media dedicated to downplaying Ukrainian losses, frequently disclaimed admitted Russian gains with immediate forecasts for their long-term insignificance in the war. Although the ISW has consistently downplayed Ukrainian losses, the reporting comes from fertile minds raised on the books from the ISW’s library. Primarily the products of interns, the ISW’s reports are neither from the military industrial complex nor the U.S. Army (which is the most intelligent of the four), neither the Central Intelligence Agency nor the network of contractors employed by the CIA in a covert fashion to act as independent commentators. These are primarily War on the Rocks, the Rob Lee group, the only secondary source the New York Times quotes, or others such as those that may publish in Rand, Foreign Affairs or Foreign Policy, etc... The ISW interns are neither affiliated with nor influenced primarily by MI6, Sandhurst (i.e., an excellent university with a great tradition in the study of war), or other English intelligence outfits. The ISW’s reports thus represent a unique contribution to the study of the Ukraine war, diversifying the pro-Ukrainian pool of opinions with distinctly different points of view.

The ISW interns typically receive welcomed support. Accordingly to posts on Twitter/X, they receive a stipend around 1,500 dollars, room, board, a library card to the ISW’s library, a laptop, an office, courses, or opportunities to enhance their knowledge of warfare.

insider trading () • During the Ukraine war, the Trump administration sought to sign into law a bill restricting ”insider trading” for Congressmen.[194] The law is not just a stupid charade designed to temper the Democrats against the Republicans; it is not a "marvelous state of the art tactic."[195] It is far more sinister. It is nothing more than a new instrument for the police State bureaucracy[196] to exert control over Congressmen, since the bill subjects Congressmen to Federal criminal prosecution. A congressman who is accused of "insider trading" after an investigation may, nonetheless, escape Federal criminal prosecution, should the Federal government's Attorney General decide not to file charges at all; after all Federal criminal prosecution is but a selective, non-compulsory, discretionary process anyway. Even the threat of an investigation into a Congress member's "insider trading," however, would be enough to exert control over a Congressman. There is the crux of the matter. Since the Attorney General is under the direct authority of the President, a Presidential Administration could therefore blackmail a Congress person engaged in "insider trading" (inadvertently or on purpose) with the threat of an investigation or even criminal charges.[197] Trump's bill thus effectively provides the Federal government's Executive Branch with more influence over Congressmen than any previous bill, thereby tipping the scales in the system of checks and balances.

---

[193] It is clear that in at least one case the system DHS exploits must have accessed a driver’s most recent bank withdrawals.

[194] The original bill only applied to lawmakers; it was co-sponsored by Sen. Bernie Moreno, R-Ohio. The bill was originally titled the “PELOSI Act,” a reference to past accusations by

Directed at controlling rather than regulating the influence of 'special interest' on Congressmen, special interest thus nonetheless remains. A special interest may, for instance, bribe an Executive Branch's Presidential Administration to permit a Congressman's "insider trading." Should the bill pass, special interest would thereafter be required to conduct the business of insider trading through the Executive Branch rather than directly through individual members of Congress. Trump's bill merely reroutes the path of least resistance from Congressman or Congresswoman to the Executive Branch. Neither members of Congress nor special interest escapes the Executive Branch; either way the Executive Branch benefits from Trump's bill.

While insider trading must certainly be the subject of regulation, there are two problems with the so-called PELOSI Act; the first is, as mentioned, the expansion of the Executive Branch's control over mem-

---

Republicans that former Speaker Nancy Pelosi, D-Calif., whose benefit from inside information in stock trading not only increased the wealth in her portfolio but provided the insider with an opportunity to influence Pelosi's decision making in Congress directly. The actual title of the bill is S.1879 - Ban Congressional Stock Trading Act. Who is former Speaker Nancy Pelosi, D-Calif.? She is a heinous psychopath whom members of the left wing of the State security apparatus call 'mama bear,' a nickname that epitomizes the psychopathy at the heart of the left wing of the State security apparatus. In his own articles on Pelosi, David North spares no compliment. Having served in the House since 1987 for California's 11th congressional district, most of San Francisco, Calif., Pelosi's history of legislature in the House of Representatives reveals a surprising lack of distinction in its dearth of reform. Has Nancy Pelosi ever passed legislate to improve San Francisco, California or America?

[195] In a long lost collection of political pinups from the 1980s, Hardball, Chris Matthews, a contemporary Machiavellian politician, enunciates how "[behind] those vaunted closed doors lies not only the paraphernalia of power but a distinctive language. It is a world of tough old alliances, Gothic revenge and crafty deal-making, but also of marvelous state-of-the-art tactics such as spin and positioning." Matthews' Washington lexicon is among the most colorful for political pundits but he suffers from false consciousness; his belief that Trump's January 6th attack on capital hill was not a Federal conspiracy orchestrated by America's State security apparatus undermines his lack of clear depth on American politics.

[196] The U.S. is not an exemplar of organic solidarity. It is thus legitimate to suppose that from time to time the police State bureaucracy in the U.S. may or may not align with a Presidential Administration.

[197] The trend during the past few decades, however, has been for Democrats to file charges against Republicans or vice versa so that the promise of a pardon at the changing of the guard guarantees a party's power over the party member. It is a sinister way to whip American politicians, the vast majority of whom are engaged in one or another form of corruption, into submission.

[198] The PELOSI Act is even more problematic, if you consider a blind trust to be problematic;

bers of Congress; the second is its prevarication[198]; the PELOSI Act solves nothing; it merely shifts power over insider trading from members of Congress to the Executive Branch without a solution for the root case of the problem of special interests.

A truly effective way to regulate special interest would relate to none of the three branches of the Federal government, all of which have become totally subordinate to the will of a thin layer of America's richest oligarchs, but to the electoral system itself. The fact that campaign finance remains largely unregulated undermines the central principle of equality in American elections. A candidate, whose ability to raise more money than his or her competitors guarantees his or her election, simply bypasses his or her constituent electorate altogether. If a new electoral system were to limit campaign finance to a low threshold with a requirement for candidates to engage in seven four hour long debates live streamed on the Internet from locations throughout a city, a county, a state or the nation, elections might reach a level of engagement on par with Abraham Lincoln's debates with Stephen Douglas from 1858. A candidate would never be able to simply bypass his constituent electorate.

In 1858, Lincoln confronted Douglas before large audiences in seven places throughout Illinois for several hours: in Ottawa on August 21, in Freeport on August 27, in Jonesboro on September 15, in Charleston on September 18, in Galesburg on October 7, in Quincy on October 13, and in Alton on October 15. The newspapers covering these debates not only republished these debates but provided analyses. So important were these debates that Lincoln felt the need to memorialize them in a book.

America's current debates, including the one now raging over the PELOSI Act (which ignores most of the important issues), are not worth the paper they are printed on but a series of seven debates in a new electoral system with campaign finance limited to a low threshold would marginal-

---

a blind trust is a legal arrangement that gives a trustee control over your money and property without your knowledge or input. A possible workaround could easily be to refer the insider to trustee's law firm. The insider could coordinate insider trading with the trustee's law firm, since the language of the PELOSI Act covers the relationship a prospective trustee of a Member of Congress' blind trust is so broad as to exempt a trustee's law firm; if the trustee himself or herself has no personal knowledge of an interested party obtaining knowledge of any trust property other than the initial property of the qualified blind trust, then the trustee cannot be subject to enforcement. Given the complicated nature of the more than five requirements for §13162.(f)(3)(A-E), no Member of Congress is likely to submit the required notice on his or her own but through a lawyer. Should the noticing lawyer be involved, his or her law firm could easily contact the trustee's law firm to coordinate insider trading; therefore neither the noticing lawyer nor the trustee would have personal knowledge of the insider trading. It is clear from loopholes like these that the PELOSI Act is neither a stupid charade nor a "marvelous state of the art tactic" but a bill carefully crafted to ensare the American public in a vile deception of reform.

[199] A special interest could still attach itself to a candidate but in the form of pledges. If a special interest's candidate wins, the special interest could realize its pledge. These pledges could be designed to sponsor a public work project such as building a library, endowing a university with scholarships, improving a park, or completing a project aimed at the common good. The vast majority of the money special interest spends on American elections in the current system is swamped, wasted, spent down the drain, on the election itself rather than on the electing community. Advertisements, for instance, are an excellent example; an advertisement for a candidate in an election loses its relevance for a community after voting; it contributes almost nothing to the community's common good, being biased, prejudiced or partial. A pledge, however, has the advantage of outliving an election. A tendency for skinflint must replace America's propensity for spendthrift in elections, lest the country continue to waste money on what are arguably elections rigged by America's State security apparatus. The election of U.S. Representative, Alexandria Ocasio-Cortez, for New York's 14th congressional district on June 26, 2018, for instance, resulted from an election engineered carefully to ensure its outcome; the Democratic Socialist of America (DSA), the New York chapter of which Ocasio-Cortez represented, is an instrument of the Federal Bureau of Investigation so America's State security apparatus rigged that election. Confirmation of its status as an instrument of the Federal Bureau of Investigation comes in the form of the

ize whatever money a special interest might like to utilize for bypassing the electorate.[199] It would turn the election away from special interests towards the electorate. It would level the playing field. It would further democratize America's republican system.[200] It would make America great again.

J

January 6th, 1975 () • The fiftieth anniversary of the official sale of 2 million ounces of US government bullion on January 6th, 1975 occurred just weeks before the third anniversary of the Ukraine war. The sale, designed to induce a hysterical aversion to gold ownership, began a propaganda campaign to dissuade Americans from gold ownership. In his book The U.S. Dollar : An Advance Obituary, Pick explains how a ”mass of buying gold was feared. It eventually could have led to an anti-dollar panic, which in turn could have led to a collapse of the global credit structure. To neutralize such dangers, strong anti-gold propaganda was begun as early as in November 1974. Television, radio, and newspapers warned the public not to buy the metal, claiming that it could not be resold profitably because of local taxes, refining costs, dealer mark-ups, etc. The expected results were achieved, and the gold rush did not take place. An official sale of 2 million ounces of US government bullion on January 6th, 1975, a week after gold freedom was restored, brought in bids for only 753,600 ounces at US 165.65 per ounce, just about 20.85 or 11 per cent below the free market bullion price a week before. The offensive against bullion, well planned strategically, did not lose momentum after the restoration of legal gold ownership in America.” (pg. 62) Pick details US Treasury auction sales for the precious metal from May 23rd, 1978 to November 1st, 1979 in Table 19 (pg. 66).

() • The Qatari news channel, قناة الجزيرة, represented a major breakthrough in the history of the media. The Qatari news channel, whose focus is less on the West than the Middle East, introduced mass media to the Arabic speaking world. Launched on November 1, 1996, the news channel Since Qatar's late father Emir Sheikh Hamad bin Khalifa Al Thani

denunciations the Socialist Equality Party, a more sinister instrument of the Federal Bureau of Investigation, made against AOC. Similarly, Zohran Mamdani, a member of the New York chapter of the DSA, won an engineered election in 2025 during the Ukraine war to become New York's mayor. If elections in America like Ocasio-Cortez's and Mamdani's are already rigged by its State security apparatus, the money spent during an election would be better invested in the community than in campaigns. After the campaigns matter less for competition between candidates than for the presentation of a facade of democracy. Isn't it a bit extravagant to spend millions of dollars on a facade of democracy?

[200] In The Golden Age of American Oratory (1857), Edward G. Parker demonstrated how American rhetoric changed over time. ”The oratory of Congress, in the earlier years of the republic, truly represented the national eloquence of thought. The earlier Congresses were mirrors of the national soul and mind. The representatives were chosen by the people for signal services, or splendid talent. It had not then been discovered that small mind may be elected into ” great men.” A great man then must be dubbed ”great” by something else than an accident, an election, or an intrigue. The constituency then sought out the representative, not the representative the constituency.” A requirement for campaign finance to be strictly regulated in a system of election by debate would revive ”oratory of Congress.”

launched the independent channel – a first in the Arab world – the network to provide ”the opinion and the other opinion,” causing previously marginalized political perspectives, seldom discussed on the broadcasts for regional news agencies, to become the subject of debate across the entire Arab world with both advantages as well as disadvantages. While the channel reports on nothing related to Doha, the channel's reporting on events throughout the Arab world is indispensable.

In 2001, when the United States attacked Afghanistan after the orchestrated fall of the Twin Towers on September 11th, 2001, Al Jazeera remained the only foreign broadcaster in the country's capital, Kabul, providing an unparalleled glimpse into Afghan society. After Mohamed Bouazizi, a 26-year-old Tunisian street vendor whose self-immolation on December 17, 2010, in Sidi Bouzid, triggered the Jasmine Revolution that ignited the broader Arab Spring, Al-Jazeera became one of the few Arabic speaking channels to broadcast the demise of Hosni Mubarak on live television. It is perhaps the first time in history that a revolution of world historic importance became ” televised.”[201] Al-Jazeera won a prestigious Peabody Award.

While many news channels ceased to allow commentators, political pundits or experts to appear on television, let alone engage in mediated debates (however short), Al-Jazeera did not follow the trend that the American media in general or Fox News in particular tried to establish with the almost complete elimination of discussion of any kind. In contrast with American media, Al-Jazeera has not allowed its news channel to become nothing more than apparatus for signaling as the American media has. During the fifth period in America's decline superpower, nearly all of America's most important sources of journalism not only stopped reporting the news but assumed the role of a relay in real-time, amplifying mes-

[201]

[202] On October 20th, 1977 Carl Bernstein from the Washington Post published a 25,000 word article in Rolling Stone under the title ”The CIA and the Media,” detailing how the Central Intelligence Agency directs members of the press to publish according to its demands. The collusion became so central to the CIA that journalists became full-time employees at the agency, masquerading as though they were members of the Fourth Estate when in all reality they operated on behalf of the Federal government. Bernstein detailed how more than 400 CIA journalists carried out more missions for the agency for more than 25 years. On December 26th, 1977, the New York Times detailed how in its global campaign to influence opinion through media manipulation the CIA ”has been able to call upon” an extensive network of ”newspapers, news services, magazines, publishing houses, broadcasting stations and other entities over which it has at various times” exercised control.

It appears as though a series of exposures surfaced over the course of the last week of the year in 1977, as the following fall in chronological order: ”A Victim of The C.I.A.,” New York Times. November 1st, 1977 ; ”The C.I.A.'s 3-Decade Effort to Mold the World's Views,” New York Times. December 25th, 1977 ; ”C.I.A. Contacts with Reporters,” New York Times. December 25th, 1977 ; ”Worldwide Propaganda Network Built by the C.I.A.,” New York Times. December 26th, 1977 ; ”Cable Sought to Discredit Critics of the Warren Report,” New York Times. December 26th, 1977 ; ”C.I.A. Established Many Links to Journalists in U.S. and Abroad,” New York Times. December 27th, 1977 ; ”Varying Ties to C.I.A. Confirmed in Inquiry,” New York Times. December 27th, 1977 ; ”Colby Acknowledged U.S. Press Picked Up Bogus C.I.A. Accounts,” New York Times. December 28th, 1977 ; ”Ex-Envoy Says Risk of Exposure Negated C.I.A. Propaganda Value,” New York Times. December 30th, 1977.

On October 2, 2014, The Intercept published an exclusive report titled ”Report on Inquiry Into CIA Related Electronic Surveillance Activities.” This 183-page report detailed how the CIA's control over America's media is not a legacy from the Cold War but a reality. The detailed findings from a Justice Department Task Force inquiry into the CIA's domestic and international electronic surveillance operations, including wiretaps, bugging, and the collection of telephone toll records is likely to be nothing more than a gaslighting operating, as the Department of Justice would never imagine subjecting one of the Federal agencies responsible for perpetuating money laundering operations to any kind of criminal inquiry. Crimes are for the working class or members of the ruling elite who deviate from the established protocols for money laundering. They're not for agents from the Federal government. Statistics on the arrest of Federal agents confirms sages.[202]

During the fourth anniversary of the Ukraine war, Al-Jazeera celebrated its 30th anniversary on November 1st, 2026. The Israeli news agency, i24, launched its first broadcast in Arabic on Al-Jazeera's thirtieth anniversary.

Jefferson, Thomas () • Undoubtedly the greatest revolutionary in the War of Independence, a potent theoretician of American doctrine of revolution, an unparalleled Statesman compared to his unbelievably accomplished contemporaries, a walking, talking, writing reflection of the world historic coalescence of the Renaissance with the Enlightenment in the Americas, the single most important founding father of the United States of America, a superseding proponent of the U.S. Constitution's Bill of Rights, a firmly empowered proselyte of sagacious, reasonable, Ancient Greek democracy the Western tradition celebrates from time immemorial, Thomas Jefferson is the single most American American in the country's history. No American has ever been more American than Thomas Jefferson.

No one embodied the English Enlightenment more than Jefferson and his affinity with and affection for John Locke and his works shines through Jefferson's work light In his Treatise on Government, Locke advocated strongly for the natural rights of individuals; Locke's justification for the Glorious Revolution rested on Parliament's enactment of a Bill of Rights in 1689; the Bill of Rights provided that the king could not suspend a law[203], nor could he raise taxes or raise and maintain an army without Parliament's consent and it further forbade the Kind from arresting subjects and detaining them without due process. Locke's justification for the Glorious Revolution rested on his be-

---

that Federal agents, whose liability under Beavins, the bogus legal doctrine made of whole cloth for limiting liability for Federal agents, is subject to an innumerable number of legal loopholes, exceptions, or escape mechanisms, are de facto immune from prosecution, a state of affairs that favors the untouchable overarching superstructure ruling America's working population. Judges, lawyers (prosecutors) or Federal agents are an untouchable nomenklatura.

Ken Silverstein, nonetheless, published the results of two gaslighting Freedom of Information Act applications, which would have never been approved, had the Federal government not wanted to allow their approvals. While the pygmies at the bar cited the CIA Act of 1949, a bureaucratic mechanism designed to empower the agency with unlimited censorship, the extensive redactions, nonetheless, demonstrated how the CIA maintained close "professional" relationships with the Associated Press, Washington Post (which Jeff Bezos acquired after the U.S. Federal government transferred the desktops of its entire bureaucracy into the Amazon cloud), New York Times, Wall Street Journal or other major sources of news in America. Silverstein criticized Ken Dilanian, a national security reporter for the Los Angeles Times, later for the Associated Press, until finally for NBC News. In his voluminous correspondence with the CIA, Dilanian promised not only positive news coverage but sent his story drafts to the CIA for review prior to publication. The CIA essentially served as Dilanian's editor. In an entirely similar manner, the State security apparatus in the U.S. requires writing staff members of the Socialist Equality Party just like Dilanian to provide drafts to the leadership, which the U.S. Federal government employs, for review prior to publication. It is thus a pattern of behavior that is repeated throughout America's media. In the approved stories, the entities within the U.S. Federal government determine which message is best relayed or else.

[203] A modern practice the Nazi jurist Carl Schmidt elaborates in his theory of the sovereign, a principle like so many others the U.S. exploits like a feather in its cap or an arrow in its quiver to annihilate the basis for American power in the U.S. Constitution. These suspensions are largely due to billionaires; groups of billionaires, for instance, meet to orchestrate acts of tyranny. The police State bureaucracy's brutal crackdown on the anti-Netanyahu protests at Columbia University in 2023, for instance, is exposed in an article. In the article, the author claims a group of American billionaires bribed the mayor of New York City to request local law enforcement, whose authority the police unions control throughout the U.S., to raise the protest. The suspension of the right to assemble is thereby clearly demonstrated; further proof of its suspension is that in the subsequently filed criminal complaints against the students, the prosecutors entered dismissals on the record without trial. These subsequently filed criminal complaints are manifestations of malicious prosecution, demonstrating how the underlying act precipitating the false arrests stemmed primarily from a suspension of the right to assemble.

lief that the natural rights of a small segment of the population-the landed classes-could not allow by their status as landowners the King to enter upon these transgressions so they act as a check on an imbalance of power. Together with Hobbes, Locke believed man leaves the state of nature by means of a social contract whereby the consent of the governed is the only permissions a government may enjoy for its continued existence. Locke specifically asserted that a government retains the consent of the people so long as it fulfills the duty of protecting the people's natural rights. If it failed to do so, the government would not only lose the consent of the governed but its legitimacy; the people would then be justified in abolishing their government through overthrow, if necessary, or by other means and instituting a new one. Jefferson embraced these ideas; Jefferson's provision in the Declaration of Independence form 1776, for instance, reflects Locke's thinking on government.[204] Jefferson and the American revolution embodied Locke's ideas from the second treatise on government and in some cases carry his language directly from the treatise into the Declaration. While " most Americans had absorbed Locke's works as a kind of political gospel; and the Declaration in its form, in its phraseology, follows closely certain sentences in Locke's second treatise on government,"[205] Jefferson embodied these ideas more closely than other Americans and contemporary American revolutionaries to such an extent that "Locke dominates American political thought" in Jefferson's works, as "no thinker anywhere dominates the political thought of a nation." Locke is so prevalent that he is a "massive national cliché."[206]

In his characteristic clairvoyance, Jefferson is one of the primary leading American advocates against central banking during the Revolution in much the same way that he did against slavery.[207] Although he witnessed Hamilton, whose death in a duel may be celebrated as a great moment in American history, twice succeed with a charter for a central bank, first with the Bank of North America (1781), second with the The First Bank of America (1791), under the tutelage of Robert Morris, Jefferson fought against the establishment of a central back. In fact, he pronounced upon the American people a deeply ominous premonition when he said: " If the American people ever allow private banks to control the issue of their currency, first by inflation, then by deflation, the banks and the corporations which grow up around them will deprive the people of all property until their children wake up homeless on the continent their fathers conquered." Jefferson even believed in an amendment designed to prohibit a private owned central bank in America. He wrote: "I wish it were possible to obtain a single amendment to our Constitution taking form the federal government their power of borrowing."[208]

---

[204] Jefferson wrote: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

[205] Becker, Carl. The Declaration of Independence: A Study in the History of Political Ideas. (New York: Vintage Books, 1922), pg. 27

[206] Hartz, Louis. The Liberal Tradition in America: An Interpretation of American Political Thought Since the Revolution (New York: Harcourt, Brace and World, Inc., 1955), pg. 140.

[207] The two issues Jefferson never managed to advance to fruition during his lifetime are the two issues missing from the U.S. Constitution and the Declaration of Independence-prohibitions on slavery and private central banking against government control over the issuance of currency. In the case of the Declaration of Independence, members of the Continental Congress prevented Jefferson from floating a passage against slavery; in terms of

[208] In a letter to John Taylor on November 26, 1798, Thomas Jefferson wrote the statement in relation to war: "I wish it were possible to obtain a single amendment to our constitution; I would

Jerusalem () • Jerusalem, conquered many times throughout its history, remained divided during the Ukraine war with the Wailing Wall in eastern Jerusalem belonging to the Israeli government, the remainder of the site belonging to the Palestinian Authority with the Dome of the Rock still before the Al-Aqsa mosque, one of the holiest sites in Islam[209] after Mecca and Medina in modern day Saudi Arabia on the Arabian peninsula.

JOHNNIAC () • An early device in the struggle to find a medium capable of mastering human speech, one of the elements of Artificial Intelligence.

June 23rd, 2023 () • In one of the greatest psychological operations in the history of the Western world, Vladimir Putin staged a coup d'etat with Evgeny Prigozhin, the head of Russia's Private Military Corporation, Wagner, an elite group of Russian special forces staffed by experienced, well trained, career military men with a long history in warfare, most especially from the Middle East and Africa.

K

Kariera Nikodema Dyzmy () • Kariera Nikodema Dyzmy is a Polish novel detailing the absurdity of service in a modern government.[210]

---

be willing to depend on that alone for the reduction of the administration of our government to the genuine principles of it's constitution; I mean an additional article taking from the federal government the power of borrowing. I now deny their power of making paper money or any thing else a legal tender. I know that to pay all proper expenses within the year would, in case of war, be hard on us. but not so hard as ten wars instead of one. for wars would be reduced in that proportion. besides that the state governments would be free to lend their credit in borrowing quotas." PTJ, 30:589.

[209] The inner life of Islamic monotheism's revelations is intelligible from a 19th century encyclopedia. A Dictionary of Islam by Thomas Patrick Hughes, published in 1885 by W. H. Allen and Co., 13, Waterloo Place, Pall Mall. S.W., is a comprehensive encyclopedia that covers the doctrines, rites, ceremonies, and customs of the Islamic faith, along with technical and theological terms, Semitic analyses of religious cognates in Hebrew and Arabic, important for understanding the Abrahamic faiths. The dictionary methodically outlines the five pillars of Islam (i.e., Shahada (the declaration of faith), Salah (prayer), Zakat (charity), Sawm (fasting during Ramadan), and Hajj (pilgrimage to Mecca)), focusing primarily on the Sunni sect, while noting from time to time how significant distinctions from Shiah or Wahhabi perspectives are prominent and distinguished in belief and practice. Hughes includes biographic entries, timelines of cities, places, or sites; Hughes meticulously integrates insights from his scholarly research with Arabic scholars, at times producing intriguing systheses of important points about the Abrahamic faith.

A invaluable resource for quickly coming abrest of developments in monotheism and the development of the Muhammadan religion, the dictionary is a reflection of the belief system of the author, a British Anglican missionary who served under the auspices of the Church Mission Society (CMS) in Peshawar in British India (now Pakistan) for 20 years. Nonetheless, the dictionary is the most comprehensive, cross-referential, detailed source of Semitic study into the Abrahamic faith in a single book. Along these lines, Hughes most notable work on the religion itself is Notes on Muhammadanism Being Outlines of the Religious System of Islam. Hughes work is therefore one of the most important contributions to the study of Arabic outside of Arab inhabited land in North Africa, the Middle Eastern, the Levatine, the Fertile Crescent, or the Arabian Peninsula. Hughes mastered Latin, Hebrew, Arabic, and Pashto, as is clearly visible from his copious, extensive, detailed notes on the three religions.

[210] Jerzy Kosinski, who published a rewritten version of the novel on April 21, 1971, prompted the creation of Being There, an anglophone movie representing the absurdity of service in a modern government where the modern government is the United States of America.

[211] Kaminski, John P., Gaspare J. Saladino, Richard Leffler, Charles H. Schoenleber, and Margaret A. Hogan, editors. The Documentary History of the Ratification of the Constitution. University of Virginia Press, 1976.

ing, Kaminski[211] compilation of documents on the history of the U.S. Constitution's ratification celebrated its fiftieth anniversary during the fourth anniversary of Ukraine's war. The book is an indispensable for understanding the conversations, considerations, arguments, counterarguments, or concepts responsible for the ratification of the U.S. Constitution. While the U.S. Constitution is thoroughly marginalized in the Federal government, the U.S. Constitution represented a significant milestone not only for American but human history.[212]

Immaneul Kant's Critique of Pure Reason () • What is reason? What is pure reason? How can pure reason be the subject of a critique? What is a critique? What is the criteria for a criteria to succeed or fail?

Al-Kawthar () • Al-Kawthar, allegedly a river of plenty granted exclusively to the Prophet Muhammed in Paradise. Mentioned in Surah Al-Kawthar (108:1), nothing in the Surah itself leads anyone to imagine what the water in the river might be.[213] The direction of the river is unknown. The river's headwater is without any mention. While often mistakenly considered to be a quadrilateral root, the root for the word is actually كثر,a root whose implementation in Arabic grammar into an adverb multiples the modified entity. In contrast with the four rivers of Paradise such as the Nile (An-Nil), the Euphrates (Al-Furat), the Sayhan (Syr Darya/Oxus), or the Jayhan (Amu Darya/Jaxartes), neither Al-Kawthar nor its root has anything to do with rivers, water, hydrogen or oxygen. Beyond the waters named directly, the Quran frequently attributes to Paradise general phrases such as "gardens beneath which rivers flow," specifying four types of rivers in Surah Muhammad (47:15), whose characteristics are water, milk, wine, or purified honey. Salsabeel (i.e., سلسبيلا), a fountain named mentioned in Surah Al-Insan (76:18) [(See Hughes, Thomas Patrick. A Dictionary of Islam: Being a Cyclopaedia of the Doctrines, Rites, Ceremonies, and Customs, Together with the Technical and Theological Terms, of the Muhammadan Religion. W. H. Allen Co., 1885.. Salsabil, 563, i]) but found in Paradise, rhymes with the word for ginger (i.e., زنجبيلا).[214]

Kimbo () • Described as the "Don King of Street Fighting," Kimbo, to whose name commentators lated added the additional moniker Slice, began his career, fighting in backyards, sidewalks or streets all over Miami, Florida before admission into the leading ranks of the most coveted league for Mixed Martial Arts (MMA).

It is important to note that Kimbo began his career on the Internet before Jake Paul sold YouTube to Google. YouTube provided a platform for YouTube users to engage in the production of videos, the likes of which the police State bureaucracy had not yet managed to manipulate. At that time, YouTube did not consist in a feed the police State bureaucracy manipulates for the sake of its domestic psychological, informational, or political purposes. Kimbo's rise thus coincided with a golden age in the era of YouTube virality where the relative freedom of user experience dictated the quality of the software. Google's acquisition of YouTube prior just after Kimbo's viral street fighting videos surfaced on the platform thus represented a major turning point in the history of the Silicon Valley.[215]

---

[212] The series of biographies on the framers is helpful for understanding the U.S. Constitution's ratification but listeners have to pay attention less to the biographies than the details surrounding the founder's involvement in the ratification to piece together information about the intellectual culture encompassing its expression on paper. A documentary focused exclusively on the history of ideas contributing to that expression has not yet been produced.

[213] The word whose root is نهر occurs no more than twice throughout the Quran (2:249:9; 54:54:5). In neither of these contexts does كثر occur.

[214] The term, Salsabeel (i.e., سلسبيلا), is often associated with passive downdraught evaporative cooling found in Iranian architecture. It is therefore plausible to claim that these rivers or, this fountain in particular, may, in fact, be streams of pure elements such as hydrogen or oxygen rather than a chemical compound like water. The fact that the word at the end of the first ayah rhymes with that of the second suggests circulation. The fact that both rhyming words are quadrilaterals with sibilants puts wind in the sail for this interpretation. With عين present, imagery is valid. The image of a cup thus invokes the aerial towers.

Fort Knox () • A series of events in the media shed light on the gold in Fort Knox during the Fourth Anniversary of the Ukraine war. The most significant of these events (of which there were five, four of which in 2026, one of which in 2025) is France's decision to repatriate its stocks of gold from New York. The US finished its repatriation of French gold during the Fourth Anniversary of the Ukraine war but only after a significant period of time had already passed. Germany waited seven years for its gold.

These events are almost entirely irrelevant. These events have focused on an "audit" of the gold in Fort Knox but in all reality Fort Knox is completely irrelevant. It does not matter whether the US still has or has not kept any of its gold in Fort Knox, since gold qua gold is hardly a matter of any significance. The significance of gold is gold qua collateral in an emerging global monetary system centered in Eurasia with China's Renminbi. America's gold stocks, if do or do not exist, cannot reserve past, current or future adoption. At the time of the debate, gold, in small, medium or large quantities, could not change the fact that the US dollar, debased, inflated, or depreciated, is no longer the world's reserve currency. No amount of gold, small, medium, or large, change the status of the US dollar, which has been the source of American power for more than thirteen to nine decades. It is hard for Americans, who did not live in the country prior to the establishment of US Federal Reserve, to imagine life without the US dollar (as the global reserve currency) but no force in history can stop the processes already well underway.

Kronrod, Yakov () • It is unclear what Kronrod sought to introduce with the completely baseless assertion that in the U.S.S.R. a system of socialist economic laws governed the Federation's economy but earlier problems related to advanced praise for a book someone other than Stalin ghost wrote for the dictator are apparent from Kronrod's earliest work. It is difficult to read Kronrod's work without a deeply seated sense of skepticism. Lenin never advanced the claim that the newly founded U.S.S.R. had advanced beyond a capitalist mode of production.[216]

---

[215] The major turning point in the history of the Silicon Valley resulted from the police State bureaucracy's overthrow of technology. The Federal government subordinated not only existing products but development itself to the manifestation of a vast, sprawling, ever widening digitization of the means for anti-Constitutional, illegal, police State surveillance. It would proceed from that turning point to the grossest form of police State authoritarianism the world has ever witnessed with overthrown products in America's private industry. Google's YouTube is no longer the platform on which Kimbo rose to stardom but an instrument for the inculcation of authoritarianism at best. [TO DO]

It is naive to believe that in the years before his debut, Kimbo's content, free from control, would not suddenly come under the influence of powerful fighting brokers. In a certain sense, the establishment of control over Kimbo's viral street combat on YouTube coincided with Kimbo's subordination to the auspices of the Dana White's fighting league, just as virality suddenly came under Google's control (where Google is nothing but an instrument of control in the hands of America's ruling elite). It is important to understand that Kimbo's transformation from an underground street combatant into a mainstream MMA fighter related primarily to control. With Kimbo's fighting and his viral fighting videos under control, the money-making began.

[216] There is no such thing as a "socialist" economy. It may surprise many who believe that a socialist economy is just the opposite of a capitalist economy but in all reality the jokes comparing a capitalist cow to a socialist cow are far more sinister than they are comedic, for attempt to shift the blame for excess on the butcher rather than the breeder. In no country has a socialist economy ever been established. Karl Marx produced no work on a socialist economy. He produced a critique of capitalism where he praised many of its features. It is extremely difficult for anyone, except capitalists, to demonstrate that planning the economy has resulted in anything but the en-

Kronrod, much like his predecessors before him, entered into philosophical disputes. In at least one of these disputes, Kronrod claimed that one of the pre-eminent Marxist scholars on Hegel, the dialectic, or the commodity began his analysis from the standpoint of value before the commodity. In response to Kronrod's accusation, the WWII veteran, the pre-eminent Marxist scholar, Evald Vasilievich Ilyenkov (i.e., Э. В. Ильенков), issued a scathing rebuttal. Published on April 5th, 19161 under the title, "A Reply to Y. A. Kronrod (Karl Marx's Capital and the Problem of Value" (i.e., Ответ Я. А. Кронроду «Капитал» К. Маркса и проблема стоимости)[217], Ilyenkov rejected Kronrod's claim that he (Ilyenkov) had started his analysis "not with commodities but from value."

It is often the case that in an examination of the disputes both in the 20s or later, the last thing analysts recognize is that a dialogue within a specific debates often occurs across fields, professions or expertise into an area where the class forces descend to extract an outcome whose final analysis often defies a direct interpretation. It can be that both Kronrod and the preeminent Marxist scholar found error together.

Kronrod's exchange with the preeminent Marxist scholar represented a high watermark for open dialogue within the U.S.S.R. where Trotsky's analysis of the privileged bureaucracy applied to explain how Stalin's revision of the Bolshevik party from democratic to bureaucratic centralism most certainly led the U.S.S.R. to fulfill not only Trotsky's prophecy but confirm his analysis that a failure to overthrow the bureaucratically centralized regime through revolution would inevitably lead to its collapse with the U.S.S.R.

Knuth, Donald () • Before the beginning of the AI revolution, algorithms dominated the curiosity of people interested in computer science. In one of the greatest books yet written on the subject of algorithms called " The Art of Computer Programming" (TAOCP), Donald Knuth famously announced how "[the] best way to communicate from one human being to another is through a story."[218] Knuth's book spans no fewer than four volumes over more than three decades of publishing. There are seven fascicles for the fourth volume alone. Volume 1 (Fundamental Algorithms) is published in 1997, Volume 2 (Seminumerical Algorithms) in 1997, Volume 3 (Sorting and Searching) in 1998, Volume 4A (Combinatorial Algorithms) in 2011, Volume 4B (Combinatorial Algorithms) in 2022, Volume 4 with Fascicle 1 (Bitwise Tricks and Techniques, Binary Decisim Diagrams) in 2009, Volume 4 with Fascicle 2 (Generating All Tuples and Permutations) in 2005, Volume 4 with Fascicle 3 (Generating All Combinations and Partitions) in 2005, Volume V with Fascicle 4 (Generating All Trees-History of Combinatorial Generation) in 2006, Volume 4 Fascicle 5 with (Mathematical Preliminaries Redux, Backtracking, Dancing, Links) in 2018, Volume 4 Fascicle 6 (Satisfiability) in 2015,

---

richment of the few over the many. Galbraith's explanation of the New Industrial State explains how capitalists plan the economy without consideration for supply or demand. President Donald J Trump's remarks during the forty day Iranian war in 2026 demonstrate how illocutionary acts program the market economy in such a way as to cause the rise or fall of prices, generating wealth for him or his closest associates in acts that can only be described, as they have, as insider trading. Insider trading of the type Trump completed during the Iranian war is centralized planning for the few over the many. Although many draw parallels from the Weimar Republic to Trump's consistently inconsistent statements, these statements are far more reminiscent of a consequential language game along the lines Wittgenstein advanced.

[217] The problem of value is the hardest problem Marx faced in defense of critique of the capitalist system.

[218] "The Computer Scientist Who Can't Stop Telling Stories". Quanta Magazine. April 19, 2020.

Volume 4 with Fascicle 7 (Constraint Satisfaction) in 2025. Knuth's emphasis on the idea that programming is less a science than an art turns the idea of computer science on its head. Called ”the father of the analysis of algorithms,”[219] Knuth's work into algorithms, the design of programs to decide how to achieve an objective through the performance of a specific series of tasks in the shortest possible period of time with the least amount of resources, is a seminal work in the 21st century.[220] It is not so much that Knuth's book is a radical departure from the analysis, pedagogy, or design of algorithms. It is that his book, written by a single author, brings together the various thoughts on algorithms into a single compilation, much in the same way that Euclid's Elements organized the achievements of geometers like Pythagorus into a single book. Therein lies his contribution.

Knuth's ability to produce a four volume book with a fourth volume containing no fewer than seven fascicles is more a result of his obedience to the ruling elite than his own abilities. Knuth, for instance, has been able to enjoy years of tenure at Stanford without the interference, interruptions, or disruptions that the search for new employment causes when members of America's police state bureaucracy swoops down on dissidents like vultures to deprive him or her of life, liberty or the pursuit of happiness in acts designed to embody the anti-Constitutional spirit of the anti-American regime.[221]

Kuttner, Erich () • In his appraisal of Germany at the time of his critique of Hegel's Philosophie des Rechts, Marx lays out ”an analogy of the Protestant Reformation” with the following: ”If the Protestant transformation of the German laity into priests emancipated the lay popes ... so the philosophical transformation of the priestly Germans into men will emancipate the people.” (p. 138) Whatever role Protestantism may have played in the Dutch revolt must therefore be seen within Marx's appraisal of the Protestant transformation. Seen within Karl Marx's understanding of the Protestant Reformation articulated at the end of his analysis of Hegel's fundamentally life-changing analysis of the Philosophie des Rechts, Erich Kuttner's Het Hongerjaar 1566 cannot but be a further articulation in the bloom of the wider European Fruhproletariats. Kuttner's unsurpassed analysis in Het Hongerjaar 1566 marked the 460th anniversary of the Dutch revolution during the fourth anniversary of the

[220] Knuth is also important for an altogether different reason. Knuth is responsible for creating the LaTeXprogram responsible for the typesetting of the present work. It is one of the many conveniences for which an entire generation of students, doctorates, researchers or scholars are indebted the world over, as the the LaTeXprogram is one of the cheapest, easiest, most elegant ways to typeset a book for self-publication in the history of the world.

[221] Can a graduate student without stability produce a volume work on a single subject over the course of more than three decades? Hundreds of thousands of American graduate students, especially women, are subjected years of prolonged periods of time without a position, stable employment, a research assistantship, stipend, scholarship, or grant, the basic prerequisite for the expressed development of human faculties over time. The interference, interruptions, or disruptions are designed to stymie intellectual development in the United States so that even the ability to express thought becomes subject to the police state bureaucracy's myriad levers of control. The employment of the United Auto Workers' union in the United States, which is one of the many levers at its disposal, actively seeks to ensure that graduate students are not only imprisoned in a prism of control but can escape only at the expense of their entire career in academia. The ruling elite, who employ the lowest levels of the Lumpenproletariat in the ranks of the UAW, are happy to watch aspiring graduate students sink below the level their intellectual promise suggests they reach. It is but one of the many ways the police State bureaucracy in the United States undermines its own people.

[222] [Kuttner, Erich. Het Hongerjaar 1566: Met Een Inleiding van Prof. Dr. J. Romein. Amsterdam: N.V. Amsterdamsche Boek en Courantmaatschappij (1949)] The German translation of the

Ukraine war.[222] Kuttner's book, however, became his last. Murdered by the Nazis, Kuttner never saw his great work to press. At Mauthausen, a Nazi concentration camp on a hill above the market town in Upper Austria, the Nazis murdered Kuttner on October 6th, 1942.

Kodansha () • Kodansha is Japan's largest publishing company, headquartered in Tokyo, and a privately held family-owned business founded by Seiji Noma in 1909. The publishing house published several important collections, whose anniversary coincided incidentally with major events occurring during the Ukraine war.

Königsberg, Seven Bridges of () • The Seven Bridges of Königsberg is a famous problem to which the famous mathematician Euler provided a famous solution.

Die Königin von Saba () • During the third anniversary of the Ukraine war, the 150th anniversary of Karl Goldmark's Die Königin von Saba, composed in the late 19th century, with a libretto by Salomon Hermann Mosenthal. Premiered at the Vienna State Opera in Vienna, Austria on March 10th, 1875, the opera chronicles Queen of Sheba's visit to the court of King Solomon in Jerusalem, recorded in 1 Kings 10:1-13 (which is largely copied in 2 Chronicles 9:1–12). The American premier occurred a decade later on December 2nd, 1885 at Metropolitan Opera

Kostiantynivka () • Towards the beginning of June (2026), Russia tightened its tactical encirclement of Kostiantynivka, the lowest and weakest of the four villages in the agglomeration (i.e., Kramatorsk, Sloviansk, Druzhkivka, and Kostiantynivka), the last standing fortress in the Fortress Belt protecting the Donbas from Russia's full-scale invasion, as Ukraine's forces began to withdraw to the north. Kostiantynivka,the lowest and weakest of the four villages in the last remaining Ukrainian fortress belt in the Donbas, fell on June 22rd, 2026, the day the United Arab Emirates opened its new exchange, the Dubai Gold and

---

Dutch appeared on April 1st, 1997. Entitled, Das Hungerjahr 1566: Eine Studie zur Geschichte des niederländischen Frühproletariats und seiner Revolution, the German title appeared in the series under the name Mannheimer Historische Forschungen.

[223] On June 22nd, 2026, launches its Gold Spot T plus 0 Contract, signifying with the fall of Kostiantynivka the beginning of the first same-day physically settled spot gold product on a regulated exchange in the GCC. DGCX empowers traders to escape the machinations of the dollar with the same-day execution, central clearing, and physical delivery of 1kg UAE Good Delivery gold settled in UAE dirhams (AED), addressing demand for faster settlement with reduced counterparty risk related to the death of the collapsing dollar. The launch echoes the UAE's alignment with China's global standard in gold for the yuan, the currency fast becoming the most traded in the GCC. Coinciding with the fall of Kostiantynivka, Dubai's transformation into a global gold hub reinforces global price discovery without manipulation by the COMEX or JP Morgan Chase, whose criminal wrap sheet just on that subject alone is longer than even the members of the most established mafioso syndicates in American history.

Unique among the global south, Dubai's exchange offers same day delivery for gold futures contracts. Interoperating on the Eurasian landmass, the Arabian Peninsula, and the Persian Gulf with China's CIPS and its mBridge platform, Dubai'ss DGCX is expected to become a global leader for settlements, payments, or transactions outside of the death of the collapsed dollar across its regions, in Eurasia and around the world. While Dubai's gold holdings pale in comparison with China's more than 50,000 tonnes of gold (an amount far exceeding the complete absence of any gold holdings in the United States of America, led by sell-out politicians, whose modus operandi focuses almost exclusively on pulling the rug out from underneath Americans in everything they do), Dubai's vaults are, nonetheless, able to facilitate redemptions in precious metal. While unmentioned, the DGCX's emphasis on delivery aligns with a wider Chinese strategy to emphasize delivery over specualtion, the precious metals over paper contracts. Shortly after Dubai's announcement, China silently pulled the plug on financial speculation on gold. On June 24th, 2026, the Industrial and Commercial Bank of China (ICBC) said it would stop offering individual trading in precious metals linked to the Shanghai Gold Exchange from July 24, effectively terminating individual trading, speculation on, or transactions in paper assets for precious metals. The ICBC's announcements follows similar announcements the Postal Savings Bank of China, the Ping An Bank and the China Guangfa Bank made.

Commodities Exchange (DGCX), to same-day delivery for precious metals.[223] Kostiantynivka's is the price Ukraine has paid for its Crimean strategy. In a way similar to the price Ukraine paid when Syrsky withdrew Ukrainians from the Donbas to strike Kursk, Syrsky withdrew Ukrainians from the Donbas to strike Crimea. The attempt to impose an FPV Drone Enclosure over Crimea has failed. The failure coincides with Belorus preparing to join Russia in a major summer offensive to crush the Kyiv regime from the north with the Belorussian army, while Russia takes advantage of the Ukrainian withdrawal to roll over Ukrainian defenses from the Great Bend at the Dnipro onward with the aim of seizing Ukraine's entire right bank.[224]

L

Christine Lagarde () • The Gen-Z protests, whose beginning the October 17th, a turning point, ushered into existence, ejected Christine Lagarde, who announced she will step down as President of the European Central Bank on February 7, 2027, nearly nine months before her current term was scheduled to end in October 2027, from her position, demonstrating how the European Central Bank (ECB) has failed to manage the collapse of its monetary policy. Based on selling government debt on papers without any backing, the ECB has witnessed a historic rise in yields on all of the sovereign bonds across the Eurozone, undermining the core instrument for G7 power on the continent. The protests, which began in earnest on October 17th, are a reaction to the results years of failed monetary policy in the crisis of capitalism have caused to Europeans across the continent. Lagarde's earlier than expected resignation reflects a major shift in the response to these failures. Rather than ease the effects diminished purchasing power in the Euro has on standards of living, the ECB has decided to double down with the introduction of a newly discovered police State measure. Lagarde acknowledged that Gen-Z would be the guinea pigs for an experiment in which members of European societies are subject to a restriction barring payments in cash beyond a thousand Euros, while requiring the

[224] Should Russia succeed with Belorus, occupying Poles with support from the Germans will declare the remaining south-western Ukraine on the left bank of the Dnipro a new European and NATO Galician state with a capital in Lvov.

[225] The requirement to deposit money into a bank account, which will be undoubtedly be a State controlled bank or a bank subject to State control, essentially advances property rights of banks over those of individuals. A deposit is a loan to a bank, as a bank is permitted to engage in fractional reserve banking without paying anything more than a fraction of the earned percentage for fractionally reserved loans to the depositors. The individuals who are required to deposit their money into a bank have no choice but to loan their money to banks for free. The requirement precludes depositors from being able to determine whether they would like to store surplus value in the form of precious metals, as these cannot be deposited into a bank. It is barbarian means with which to force European societies to accept fiat currency without permission but at their own peril. Weaponized by the State, banks will have the inconvertible right to do whatever they please with a depositor's accounts, including limiting, freezing, suspending, or prohibiting withdrawals, an undeniable deprivation of life, liberty or property without due process.

The claim that Christine Lagarde admitted to "digital control" stems initially from a prank video, whose content cannot be anything but an official statement. Although Lagarde fell victim to a prank call on March 16, 2023, in which she believed she was speaking with Ukrainian President Volodymyr Zelensky, she acknowledged during the conversation that the proposed digital Euro remainder of their money to be placed into a bank account[225]

Large Language Models () •

Latin () • A language whose integration into the American curricula for primary school used to be inseparable from the Western tradition is now no longer taught in schools so as to separate Americans not only from the the Holy Roman Church but the history of great ideas articulated in the language from its inception to its disintegration.

The problem has manifested itself in a number of ways.

The minute that the Western world abandoned Caesar's Commentario de Bello Gallico, Latin textbooks lost their focus.[226] Wheelock's great Latin textbook, for instance, is but one of the manifestations the Western world's abandoned Latin language has produced. Wheelock's latin has produced multiple editions but the book has lost the singular focus that its predecessor textbooks maintained. In Latin textbooks before the rise of Wheelock's, Latin textbooks taught a vocabularly with a purpose. The purpose of that vocabularly focused almost exclusively on the wordstock required to read Caesar's Commentario de Bello Gallico. Wheelock's Latin has absolutely no purpose so rather than focusing on an ability like being able to read a book, the text focuses on grammar. At one minute the text introduces students to a few lines from Cicero, at another from Ovid; the text is all over the place; students expecting to read works from any one of these figures from start to finish

---

would involve a "limited amount of control" over payments, specifically suggesting that small anonymous transactions (around 300–400) might be restricted to prevent financing for terrorism. Terrorism, as the State defines it, toboggans from legitimate, protected, legally sound First Amendment speech to any or statements an incumbent executive considers to be "unacceptable" so limited "digital control" can easily become a weapon for chilling protected speech.

Alternative local currencies opposed not only to the Euro but the proposed digital Euro are already in circulation in Germany. The propensity for localities to undermine the polity with a localized currency is firmly rooted in the German tradition. The Chiemgauer, for instance, is a currency circulated in the Chiemgau area of Bavaria, Germany, around the Chiemsee lake. Created in 2003 by Christian Gelleri but pegged to the Euro at a 1:1 exchange rate, the currency is designed to stimulate the local economy. Although the currency floats on a demurrage rate, the currency witnessed an annual turnover at 7 million Euros with more than 500,000 users. The Chiemgauer indicates that local communities have no problem undermining a more firmly rooted centralized bank currency. The tokenization of which Larry Fink spoke at during the 2026 World Economic Forum (which Lagarde is expected to enter after her resignation in a global trilateral), the greatest single travel destination for prostitutes in the world, is dead on arrival. Any attempt to control the money supply or banking through a "digital control grid" is about is ridiculous as an audit of the corruption in Washington.

Europe witnessed a phenomenal triumph over the corruption of private banks during the Irish Banking Strike of 1970, which saw the country's clearing banks closed entirely for six and a half months. In response to the breakdown in the functionality of clearing houses for checks, approximately 11,000 Irish pubs together with 12,000 local shops served in lieu of a formalized banking institutions, holding paper checks in exchange for commodities. The Irish Banking Strike of 1970 thus demonstrates that localities are more than capable of operating in contravention to the prevailing nostrums of flailing financiers.

[226] In the preface to Viri Romae Illustres from 1894, the author writes of a "growing sentiment among teachers of Latin in secondary schools that Caesar's Commentaries furnish Latin uninteresting for pupils" for first year Latin students. The Committee of the Ten wrote: "Our American schools are probable the only ones in the world of which this is true. The book is altogether too difficult for beginners; it is too exclusively military in contents to be generally interesting; its vocabularly is too largely restricted, from the nature of the subject, to marches, sieges, and battles, to afford the best introduction to subsequent reading; and, finally, it touches human life at too few points to be morally helpful and significant." These sentiments are value judgements about literature; they have almost nothing to do with the language itself. The Committee of Ten's decision to promote Viri Romae Illustres entailed a process of fragmentation that would lead inevitably to the type of fragmentation which is now all arage in academia for eclecticism, randomness, or a complete lack of focus. The idea that Caesar's text is too hard for students is belied by Caesar's wordstock. Caesar's Commentario de Bello Gallico contains no more than 2,190 words; it is three thousand less than the amount required for fluency in any given language. Caesar's Commentario de Bello Gallico thus represented a surmountable barrier of entry for early language learners.

seals his or her fate by the end of Wheelock's textbook. It dissolves the study of the language into an exercise for abstract concepts such as the various ways scholars have come to describe the person (persōna), number (numerus), tense (tempus), mood (modus) or voice (vōx) but these are less an experience of language than a study of grammar. A language's grammar, however, useless without its usefulness. The shift away from Caesar shifted Latin learners away from the language, culture, history or people of the Western tradition to grammar. It is not hard to understand that only a short time after Wheelock's classic Latin textbook appeared in 1956, the language has been marginalized to the lowest type of minor for undergraduates in academia. It has all but disappeared from curricula. A revivification of Latin thus requires a renaissance in the history of Latin learning.

Latvia () • Latvia became one of the most intense training grounds for NATO in 2024. While the details on NATO maneuvers hardly receive a word of lip service in the Western press, few, if any, non-Western commentators have said much at all about the 2024 Latvian maneuvers. The Russian commentator, *Рыбарь*, published, however, an article detailing the maneuvers Latvia hosted in 2024. He stated: "Натовские войска отработали стрельбы, совместные маневры, а затем после окончания активной фазы начали переброску различных формирований на восток как по автомобильной, так и железной дороге." Called Paladin Strike, these maneuvers focused on NATO's ability to mobilized its mass of forces in Lithuania for transport across the Lithuanian borders by highway or railway. [Учения НАТО в Латвии, *Рыбарь*. 2 сентября 2024 г.] The second maneuver, called Silver Arrow, focused less on transport than on combined arms warfare, such as utilizing armor, air forces, artillery, drones or all of the above to carry out an attack successfully. In November, 2024, Lithuania hosted Resolute Warrior, the third maneuver in a single year. The fourth maneuver became Oak Resolve. In all NATO conducted four large-scale, multi-national, mission distinct maneuvers in Latvia in 2024.

Karl Liebknecht () • "Compare, for example, a leader like Robert Knight (the celebrated secretary and leader of the Boiler Makers Society, one of the most powerful trade unions in England) with Wilhelm Liebknecht, and then take the contrasts that Martynov draws in his controversy with Iskra. You will seel am running through Martynov's article—-that Robert Knight engaged more in "calling the masses to certain concrete actions" [p. 39] while Liebknecht engaged more in "the revolutionary explanation of the whole of modern society, or various manifestations of it" [pp. 38-39]; that Robert Knight "formulated the immediate demands of the proletariat and pointed to the manner in which they can be achieved" [p. 41], whereas Wilhelm Liebknecht, while doing this " simultaneously guided the activities of various opposition strata," "dictated to them a positive programme of action" [p. 41]; * that it was precisely Robert Knight who strove "as far as possible to give to the economic struggle itself a political character" [p. 42] and was excellently able "to submit to the government concrete demands promising certain palpable results" [p. 43], while Liebknecht engaged more in "one-sided exposures" [p. 40]; that Robert Knight attached more significance to the "forward march of the drab, every-day struggle" [p. 61], while Liebknecht engaged more in the "propaganda of brilliant and finished ideas" [p. 61]; that Liebknecht converted the paper he was directing into "an organ of revolutionary opposition exposing the present system and particularly the political conditions which came into conflict with the interests of the most varied strata of the population" [p. 63], whereas Robert Knight "worked for the cause of labour in close organic contact with the proletarian struggle" [p. 63]—if by "close and organic contact" is meant the subservience to spontaneity which we studied above from the example of Krichevsky and Martynov-and "restricted the sphere of his influence," convinced, of course, as is Martynov, that "by that he intensified that influence" [p. 63]. In a word, you will see that de facto, Martynov reduces Social-Democracy to the level of trade unionism, and he does this, of course, not because he does not desire the good of Social-Democracy, but simply because he was a little too much in a hurry to make Plekhanov more profound, instead of taking the trouble to understand him." [Lenin. What is to be Done? 1902]

Lehman, William () • William Lehman is a Federal agent. In the development of a staged case against the United Auto Workers, Lehman helped to create a grand illusion based on a big lie. While internally celebrated for his transformation from a truck driver into a theoretically trained "Riot Maker" under the tutelage of David North's Socialist Equality Party, Lehman's trajectory, distinguished from agents like Eric Lee, a bar certified practicing lawyer, or Joe Kishore, an engineer, exhibits the type of high watermark the FBI likes to cheerlead for turncoats, Lehman's role int he labor movement is but a moment in a long history of sabotage.

Leninoids () • Leninoids is a term the International Association of Chiefs of Police and U.S. Department of Justice coined to describe the people who played a leading role in the protests of the late 1960s. In a film entitled, "The Riot Makers,"[227] an investigation into the cause of so-called racial disturbances on campuses during the 1960s hardly makes any mention of the fact that at time of the so-called riots the U.S. continued to conduct a fruitless, destructive, wasteful, illegal war against Vietnam without a reasonable justification for the slaughter. Providing a timeline of what the film makers call "major riots" following the 1964 Harlem unrest, the film is an obvious attempt to cover the Federal government's complicity in the assassination of the great Martin Luther King Jr.'s death in 1968, the death of man whose initial journey began with protests against racial inequities but ended with calls for social equality, the true motive and motivation for the Federal government's decision to murder the greatest speech maker of the 20th century.

While the film makers attempt to set aside both social as well as economic causes for the outburst of social discontent, the film's true objective is to assassinate multiple characters with a single clip from a long reel of film. The film labels figures like Abbie Hoffman, Rennie Davis, or Tom Hayden[228] as purveyors of a new type of trained agitators called "Leninoids" after Vladimir Iliych Lenin.[229] It had absolutely nothing to do with riots. While the film makers claim the American Leftist movement had its roots not just in the Soviet Union but in Hitler's Germany, the film presents little to no evidence of these claims. It claims "each provocateur was a 'graduate engineer in social demolition,' the techniques the film makers attribute to these riot makers (which is a fairly accurate assessment of their political activity) are precisely the ones agencies like the Federal Bureau of Investigation used against dissidents throughout the 1960s, 1970s, and 1980s, as detailed in numerous books on its Cointelpro[230] campaigns to smash alternative news media. Nowadays the FBI can only evoke the daydreams of its past with new amalgamations such as "black identity extremist." The exposure of the FBI's role in many left wing organizations during these three tumultuous decades provides further evidence for its complicity in their creation. The U.S. makes its own boogeymen.

---

[227] The police State bureaucracy in the United States produced multitudes of films just like " Riot Makers." These are "Mob and Riot Control" (1964), "Watts: Riot or Revolt?" (1965), etc... But "Riot Makers" represents a breakthrough in the divulgence of its political ideology.

[228]

[229] The accusation actually more undermines Lenin, whose objective in his book What is to be Done? is not to create new protest leaders but anchor the working class struggle firmly within the center of orthodox Marxist theory by combining the hierarchical transformation of the Great German General Staff's organization principle for theoretical militancy with a modern 20th century political party, than sheds light on these nameless political figures.

The narrator is one of the most vile Hooverites imaginable. His definition of a riot is a direct attack on the Bill of Rights' right to assemble, designed to denigrate an American's right to exercise his or her right to nothing more than anarchism. The sanctity of a practical understanding of Hannah Ardent's definition of totalitarianism implemented in the U.S. must be the unutterable Big Lie that every agent of the FBI must make his or her mission to preserve.

Library of Materialism () • During the fourth anniversary of the Ukraine war, the Institute of K. Marx's and F. Engels' "Library of Materialism" under the editorship of A. M. Deborin and D. Ryazanov (i.e., ИНСТИТУТ К. МАРКСА и Ф. ЭНГЕЛЬСА. БИБЛИОТЕКА МАТЕРИАЛИЗМА под: РЕДАКЦИЕЙ А. ДЕБОРИНА и Д. РЯЗАНОВА.) celebrated its 100th anniversary. The authors for whose works A. M. Deborin wrote a foreword in the Library of Materialism are Thomas Hobbes (April 5, 1588 - December 4, 1679) , Paul Thiry, Baron d'Holbach (December 8th, 1723 – January 21st, 1789), Denis Diderot (October 5th, 1713 - July 31st ,1784), Julien Offray de La Mettrie (November 23rd, 1709 - November 11th, 1751), and John Toland (November 30th, 1670 – March 11th, 1722). These works are: 1) Томас Гоббс. Избранные сочинения. Перевод А. Гутермана. С предисловием А. Деборина. С портретом Гоббса на отд. листе. М — Л. 1926. Стр. XXVIII — 276., 2) Поль Гольбах. Система природы, или о законах мира физического и мира духовного. Перевод П. Юшкевича. Со вступительной статьей А. Деборина. М. 1926. Стр. XXXV — 578., 3) Дени Дидро. Избранные сочинения. Под редакцией и с предисловием А. Деборина. С 2 портретами на отдельных листах. М. — Л. 1926. where Том 1 has Стр. LVI — 359. and Том 2 has Стр. 342, 4) Ламеттри. Избранные сочинения. Перевод с франц. С предисловием А. Деборина. ....—.1925..1—372., 5) Джон Толанд. Избранные сочинения. С предисловием А. Деборина. ....—.1927..*LXVI*—192. Since the majority of these titles, every single one of which is considered to be a great book in the cannon of Western thought, received a date of publication in 1926, 1926 is touchstone for the anniversary of the first three, while Ламеттри's came before theirs, Толанд's after theirs.[232]

---

[230] FBI Director Hoover's general COINTELPRO (COunter INTELligence PROgram) directive intentionally trained agents to "expose, disrupt, misdirect, discredit, or otherwise neutralize" the activities or leadership of the working class movements they infiltrated with the aim of preventing workers from 1) exercising any rights such as those enumerated in the Bill of Rights, 2) exerting any influence over the politics of the state, or 3) in any way "exposing, disrupting, misdirecting, discrediting, or otherwise neutralizing" the activities of the Federal government's insistence on maintaining authoritarianism at any or all costs. 3) The emphasis on maintaining a monopoly on violence is simply not enough; violence, however gentle or harsh, has never been enough for the execution of the Hooverites; it must focus on the preservation of the highest order of authoritarianism so that the State never returns to a democratic Republic led by representatives elected by the population in any shape, size, or form but remains firmly within the hands of those most committed to securing the preclusion of any political party differing from the one the Democrats form with the Republicans together with the suppression of any voice opposed to the status quo ante. 4) The COINTELPRO program unleashes the gates of hell, anything Dante Alighieri could envision to be the basis for eternal condemnation to one of his lowest circles in hell, to guarantee the usurpation of the direction, development, or constitution of objective consciousness so that workers, whom the FBI's agent chain to the wall of a cave, see nothing but shadows on the wall.[231] Light must be shut out with darkness completely so that no worker escapes the degradation of consciousness that keeps him or her chained to the wall.

Die Karl-Marx-Universität Leipzig () • ”Die Leipziger Universität wurde 1409 gegründet. Im Laufe der vergangenen Jahrhunderte haben hier berühmte Menschen studiert, z.B. Leibniz, Lessing, und Goethe.

Im zweiten Weltkrieg wurden viele Universitätsgebäude zerstört. Im Jahre 1945 begann man, eine demokratische Universität aufzubauen. Währen früher Söhne und Töchter reicher Eltern studierten, sorgt jetzt der Staat dafür, daß von Jahr zu Jahr mehr Arbeiter- und Bauernkinder das Studium aufnehmen können. Es sind etwa 60 Perzent aller Studenten. Außerdem wurde die fortschrittlichste Philosophie, die Lehre von Karl Marx, die Grundlage für die wissenschaftliche Arbeit der Lehrkräfte und Studenten.

Bei dieser Demokratisierung ist die Leipziger Universität allen anderen Universitäten und Hochschulen der Republik Vorbild geworden. Daher verlieh die Regierung der DDR[233] im Jahre 1953 der Universität den Namen ”Karl-Marx-Universität.”

Die Karl-Marx-Universität ist Ausbildungsstätte für die verschiedensten Fachrichtungen. Allein für die Ausbildung der Ärzte stehen zahlreiche Gebäudekomplexe zur Verfügung, die einem ganzen Stadtteil das Gepräge und den Namen ”Klinikviertel” gaben. Im Laufe der letzten zehn Jahre wurden mehrere Institute und Fakultäten vollkommen neu aufgebaut.

Die Universität hat zahlreiche Fakultäten: die Philosophische Fakultät, die Fakultät für Journalistik, die Mathematisch-Naturwissenschaftliche Fakultät, die Landwirtschaftliche Fakultät, die Wirtschaftswissenschaftliche Fakultät, die Juristische Fakultät, die Medizinische Fakultät und die Veterinärmedizinische Fakultät. An jeder Fakultät bestehen mehrere Fachrichtungen.

Die Karl-Marx-Universität ist die größte in der DDR. An ihr studieren zur Zeit ungefähr 12 000 Studenten und Aspiranten aus 38 Nationen. Die ausländischen Studenten, die nach Leipzig kommen, bereiten sich zunächst ein Jahr im Institut für Ausländersstudium vor.

Außer der Universität befinden sich zahlreiche Hochschulen in Leipzig: die Hochschule für Musik, die Hochschule für Grafik und Buchkunst, die Theaterhochschule, die Hochschule für Binenhandel und die Hochschule für Bauwesen.

Der Staat stellt für das Hochschulwesen sehr viel Geld zur Verfügung. Alle wissenschaftlichen Institute werden großzügig gefördert, über 90 per cent der Studenten bekommen Stipendien.”[234]

Light () • In one of the future developments of the Ukraine war, fiber optic drones, which are less susceptible to Directed Energy Weapons, High Powered Microwaves, or Electro-Magnetic Pulses, are expected to undergo a further transformation with the incorporation of light into the various components responsible for its flight. These components, mostly onboard electronics which are currently subject to disruption from a DEW, EMP or HPM, are expected to be designed with light.

Light offers notable advantages not merely beyond immunity to these types of weapons. In terms of its ability to program realities in mathematics, light is capable of being configured to exhibit the properties theorized in group theory. For instance, passing light through a clear lens can serve as the unit; black lens as null; various other lenses as functions.

---

[232] Although A. M. Deborin and D. Ryazanov prepared to publish works under the names of the following authors Спиноза, Пристли, Лукреций, Гассенди, Робинэ, Дицген, Герцен, Чернышевский, and Лавров, these apparently did not see the light of day.

[233] The art from the DDR became en vogue during the Fourth Anniversary of the Ukraine war. [”Nur zeigen reicht einfach nicht,” Die Zeit. 17. August 2026]

[234] *Путешествие по городам ГДР. Издательство Просвещение: Москва. 1966*

If light is a manifestation of the same phenomena as electricity, the binary principle of denoting a sequence of hexadecimal numbers with bits may be just as photonic as electric. If the mathematical rules for representing mixtures of colored light can be represented with photonics, these may exceed the spectrum of the binary principle. A mixture of light would allow for a new type of computer logic to develop. It would allow for intermediary states. In his treatise on Electricity and Magnetism from 1873, James Clark Maxwell[235], one of the greatest post-Enlightenment scholars of physics before Einstein, describes light as governed by the same phenomena that govern electricity and magnetism, unifying these concepts in his equations.A central processing unit whose cores are based on light rather than electricity will significantly enhance not only the speed but the power of computation. Since light is governed by the same phenomena as electricity (i.e., light is an electromagnetic wave), light should be able to provide for a more complex type of computing beyond the electrified binary principle because light may not only emulate but mock electricity with its myriad number of states. A computer is nothing more than a state machine. If the number of states can be expanded beyond ones or zeros to colors from light, the state machine would exceed the electrified binary principle. Since red, green, and blue are primary lights, the three different lights can represent three different states with mixtures of the lights being intermediary states so programmed. These mixtures can, in turn, serve as functions for groups, rings, or fields manifested with a complex of light than with ones or zeros. It is really easy to imagine how the properties of groups may be represented in terms of Maxwell's theory of light.

Not based on a flashing beam of light triggering a one or a zero as the present day design for photonic processors dictates, CPUs designed with a Maxwellian photonic core (MPC) are expected to exceed the power of intermediary states in the superpositions of cubits from quantum computing. The present type of flashing beam of light ignores the fact that Maxwell proved light to be composed of primary colors, whose differentiation, rather than a flashing beam of light, is the basis for intermediary states.

Let us suppose, for instance, that an equation for the set of colors resulting from operations on the three primary colors is the following: $c \quad xR + yG + zB$, where c, the color resulting from the operation, R, G, B, standing for the three primary colors (Red, Green, Blue), with the amount of these primary colors designated by the corresponding lower case letters, x, y, z (i.e., the ratio of its illumination[236]), records the result of the operations. The lower case letters, a, b, c, are thus the measure of c. In terms of the set of all the possible colors of c, we shall designated that set by the capital letter, C so that all colors c so resulting from the operations on the three primary colors shall be therein contained. It thus follows from Maxwell's explanations that the behavior of the set of colors C are algebraic. Namely, the set C displays the properties of a group. We shall enumerate the properties. (C, *) is a group, since associativity holds for $R * (G * B) = (R * G) * B$ for all R, G, B in the set C; moreover, there exists an identity element e of C such that $R * e = e * R$ for all R of C; for any R, G, B there exists a color a to the negative 1 of C such that a * a to the negative 1 equals a to the negative 1 * a equals the identity element. Since (C, *) holds for R * G equals G * R for all R, G of C, the set of colors is an abelian group (i.e., a commutative group).

---

[235] A grand statue of Maxwell in the city of Edinburgh, Scotland, his birthplace, with a wooden dowel composed of the three primary colors from his famous experiment in his hand.

[236] James Clark Maxwell demonstrates in section 3, equations 1 through 5, "the ratio of its illumination" in the famous article the Royal Society of London published in 1860. (pp. 62-63)

It is absurd to have faith in the idea that quantum computing spells the end of cryptography, since quantum computing would give rise to quantum cryptography. The whole idea of cryptography, however, is paranoia. The information States hold secret are hardly ever so recondite that open source analysis cannot uncover a hint. If an archaeologist is able to imagine the reconstruction of an unknown dinosaur from a single bone fragment,[237] a hint obtained from open source analysis can easily reveal the entirety of a secret.

Lithium () • During the Ukraine war, lithium, white gold as it is called, became one of the elements great powers around the world began to covet. According to Soviet analysts from the early days of the successful Bolshevik revolution, which had absolutely nothing to do with an unsuccessful Rothschild conspiracy to implant private central banks into Czarist Russia, the Ukraine is not only the breadbasket of Europe but a historical site playing host to a hotbed of bloody contest over one of Europe's most prized sources of raw materials. During the Ukraine war, Russia itself captured no fewer than two of Ukraine's most important lithium mines; these are the Shevchenko lithium deposit in the Pokrovsk direction (January 11th, 2025) and the Kruta Balka in the Zaporizhzhia Oblast (2022). As a result, Russia's capture of these mines, Western analysts argue, "[disrupts] progress toward leveraging Ukraine's lithium reserves to support Europe's strategic autonomy in critical minerals."[238] Within the context of the Ukraine war, lithium thus raises important questions about how a country relates to raw materials. What is "strategic autonomy"? Is "strategic autonomy" the prerequisite for great power? Is the lack of strategic autonomy an indication of a weak power? Is the objective for "strategic autonomy" power? Is the objective independence? Is "independence" a subordinate feature of "strategic autonomy" such that a strategically autonomous country is, ipso facto, independent? Is it possible for a country to be truly independent?[239]

The idea of "Europe's strategic autonomy in critical minerals” underscores the dilemma inherent in the political form of nation and state in a globalized economy. It is an oxymoron for Europe to invoke the idea of autonomy in the European Union where the union presides over the confederated states in jurisprudence, politics, economy, or, a derivate therefore, currency. If even imaginable, Europe’s ”autonomy” would mean but dependence for a competing continent like Eurasia, Africa, North America, or South America. It is clear from Russia’s dependence on a mine in Chile how even the capture of two deposits of lithium ore in Eastern Europe cannot emancipate Russia from its integration into the world economy. While Russia’s own newspapers derided Ukrainians with the loss of the Shevchenko lithium deposit, the ” gigantic problem” is not the loss of access to, control over, or exploitation of this or that mine but the realization that no matter how hard a nation state strives, none may escape of the ties of mutual dependence.

---

[237] Another example is that human analysis can deduce the tools an artist utilizes for his or her artwork. The Hockney Falco thesis, for instance, claims that 16th century painting relied on either concave mirrors or refractive lenses to project the images of objects illuminated by sunlight onto his board/canvas. In the BBC's documentary on the Hockney Falco thesis, a picture Lorenzo Lotto, an Italian Renaissance painter, draughtsman, and illustrator, traditionally placed in the Venetian school, painted is displayed. [Hockney, David. David Hockney's Secret Knowledge. Directed by Randall Wright, BBC, 2002.] In 1545 painting called, "Portrait Of A Married Couple," the tablecloth loses focus as the viewer's eye travels from the edge to the center of the table, from foreground to background (i.e., a depth of field problem where the scale of the one no longer matches that of the latter). American experimental physicist, Charles M. Falco, an expert on the magnetic and optical properties of thin film material, derived the information necessary for determining not only the type but the focal length and diameter of the lense Lorenzo Lotto exploited for his rendition of tablecloth from the application of geometry to measurements he took on the disparities separating the foreground to the background to demonstrate that the painter likely did not paint from the mind's eye but a lens. While the theory is an excellent example of constructive imaginative realism (i.e., the ability to construction what must be based on what is), the Hockney-Falco thesis is only partially correct as no one, painters least of all, looks at anything exclusively through a lens; the lens is merely an instrument for the enhancement of an object already in view, meaning that an artists sees his object before magnification. The Hockney-Falco thesis, however, may be easily integrated into contemporary AI algorithms to enhance the ability of AI both to recognize as well as to apply the principles of optics and geometry to analyze and generate images.

[238] ["Russia Takes Control of Ukrainian Lithium Mines," OilPrice. January 14th, 2025]

[239] Is a country like Aristotle's political animal. A country without a dependence upon another is either a god or a beast.

In South America Chile’s[240] large mine in the Atacama Desert played host to the rivalry during the first year of the Ukraine war. In response to the Ukraine war, Albemarle Corporation, the company in charge of the mine, suspended operations in Chile, forbidding deliveries of products or technology to Russia.[241] The disruption to Russia’s supply of lithium from Chile demonstrates how contracted supply chains for the extraction of critical minerals or elements became tightened[242] in the face of the Ukraine war,[243] just as the United State began conveniently to revive the Monroe Doctrine from its military history in the region when in 1898 the U.S. conquered almost the entire Pacific.[244]

---

[240] On Monday January 5th, 2025 the website from the U.S. Department of State displayed a blank page for a hyperlink to an announcement on the declassified daily briefs President Nixon received during Pinochet’s military coup d’stat against the democratically elected socialist President Salvador Allende on September 11th, 1973. The first reference to these declassified documents, two of President Nixon’s daily briefs from September 8th, 1973 and September 11th, 1973, is in a Russian article published by РБК on August 26th, 2023 under the title, США рассекретили документы о госперевороте в Чили в 1973 году. It is well established throughout the literature on Chile that the CIA paid Pinochet to overthrow Allende in a coup d’état so the removal is a forbidding reminder of the severe consequences the application of a modern Monroe Doctrine in the age of a great power rivalry focused on minerals, rare earths or coveted elements.

[241] According to the Spanish daily, La Tercera, Russia purchased a majority stake in the mine on April 13th, 2022. [”Wealth Minerals firma acuerdo con filial de rusa Rosatom para proyecto de litio en Chile,” La Tercera.] In 2022, an article the news agency published described how Russia acknowledged the ”gigantic” problem the ban of exports to Russia would cause. In the article, Vladislav Demidov is quoted as saying, ”en Rusia no hay extracción de mineral de litio. El mineral lo recibimos en forma de carbonato de litio de Chile, Argentina, China y Bolivia. El problema con el litio ya es gigantesco ya que en caso de que se produzca una negativa a suministrar mineral por parte de Bolivia, no tendríamos de donde sacarlo”. The newspaper further reported how ”[la] interrupción de los envios de litio procedentes de dichos países puede tener consecuencias muy graves para Rusia.” [”Rusia reconoce problema gigantesco por cese de envíos de litio de Chile y Argentina,” La Tercera. April 13th, 2022]

[242] Just as Russia itself sought its own mine for the extract of lithium during the second anniversary of the Ukraine war (in part due to the loss of the Chilean mine), the United States embarked on its own exploration for uranium during the third anniversary when the U.S. Department of Energy announced on January 5th, 2026 its intention to mine uranium in the country in a campaign called ”Unleashing American Energy Dominance.” ”В 2022-м Аргентина и Чили приостановили поставки литиевого сырья в Россию. Через год «Норникель» вместе с «Росатомом» создали совместное предприятие «Полярный литий». The new company, «Полярный литий», aims to extract lithium from the Колмозерское месторождение литиевых руд. The company plans to extract no less than 2 million tonnes of lithium ore, carbonate, and hydroxide in an effort to compete with the top three countries leading lithium production: Australia (86 thousand tonnes a year), Chile (44 thousand tonnes), China (33 thousand tonnes). [”Металл для энергоперехода: сможет ли Россия обеспечить себя литием,” *РБК*, November 27th, 2024]

[243] During the second anniversary of the Ukraine war, ENAMI (La Empresa Nacional de Minería) announced a competition, offering six companies the opportunity to compete for a stake in three more Chilean deserts filled with lithium: La Isla, Aguilar and Grande. The six companies became BYD Chile (China), CNGR Advanced Material (China), LG Energy Solution (South Korea), Eramet Chile (France), Posco Holdings (South Korea) and Rio Tinto Mining and Exploration Limited (English-Australian). ENAMI announced the winner in March, the third anniversary of the Ukraine war (2025). France Eramet won the contract. Within the context of France’s contract, the question of ”strategic autonomy” for Europe arises again. Does France’s acquisition of

Lithuania () • On December 11th, 2025, Lithuania published a post through its Ministry of Defense declaring how ”we signed a new deal to speed up delivery: all Leopard 2 A8s will arrive by 2030, with the first locally assembled tank rolling out in early 2028 - a major boost for [the Lithuanian army] and regional security.” Prior to the announcement, Lithuania played on a minor role in the buildup for war against Russia, hosting military maneuvers for NATO in its country. On October 23rd, 2025, El País published an article describing how Lithuania denounced Russia’s violation of its air space.[245]

Apart from military maneuvers, Russia’s news agency ***Регнум*** published a steady stream of articles, detailing how Lithuania began to subordinate the interests of its sovereign budget to those of the ”international of death and destruction,” signing multiple contracts to arm itself for a further proxy war with Russian for whose initiation, prosecution or the consequences thereof Lithuania, Lithuanians, and Lithuania’s government would inevitably be responsible, even though Lithuania joined U.S.-led NATO on March 29, 2004. The reason is that no Member State has either the budget or the manpower to wage a conflict of any kind with Russia, despite Ukraine’s success.[246]

Leonidas () • Leonidas represents a major breakthrough in the technology against drones on the battlefield.

LESO1033 Program () • The primary federal initiative is the 1033 Program (formally the Law Enforcement Support Office or LESO1033 program), which allows the Department of Defense to transfer excess military equipment to local law enforcement agencies for free, with agencies only covering shipping or maintenance costs. Additionally, the 1122 Program permits local police to purchase new military-grade equipment at federal discount rates using their own funding for anti-drug, homeland security, or emergency response activities, indicating that local budgets may be hijacked for the sake of expanded local police State militarism. The LESO1033, however, requires a recipient police department to deploy

---

a contract for a lithium mine in Chile make Europe, ipso facto, strategically autonomous? Does not France’s dependence upon Chile dissolve the fantasy of independence? Is not France now dependent upon Chile for its lithium? If France’s dependence relies on Chile, Europe’s own is several degrees more severe than France’s. In what sense does the political form of nation and state achieve independence in a globalized economy? Is not France’s acquisition of the mine the chagrin of the losers? Are not the countries without access to the mine doubly, triply, quadruply more dependent upon the Franco-Chilean mining relation than before France became the prize winner?

[244] The revivification of the Monroe Doctrine corresponded well with U.S. sanctions on Russia in South America for the Ukraine war.

[245] [”La OTAN moviliza a dos cazas españoles tras la entrada de dos aviones rusos,” El País, October 23rd, 2025] It stated: ”Lithuania ha anunciado una intrusión en su espacio aéreo de dos aviones rusos, lo que ha obligado a activar dos cazas Eurofighter españoles. “Nuestras fuerzas actuaron rápidamente con cazas de la OTAN.”

Как вооружаются северные соседи России,” *Регнум*. 16 июня 2025], [”Разворовав военные бюджеты, литовцы украли чертежи военной техники в Африке,” *Регнум*. 12 октября 2025]

[247] It is unlikely that the U.S. Federal government, which is one of the most prodigious governments yet known to mankind, has ever reclaimed disbursed equipment under the LESO1033. The auctions the U.S. Federal government hosts for equipment from the Department of Defense’s branches of services evidences markdowns beyonds 99 per cent for incredibly valuable, hardly used, almost new equipment.

the received equipment within a year or else be subject to its forfeiture.[247]

Al Jazeera published a documentary under the title, ”The Military-Police Pipeline,” on August 30, 2025, detailing how programs like LESO1033 have become a global phenomenon designed to quell popular unrest, especially in France.

Lopukhin, A. A. () • In his description of his career in the ranks of the Czar’s forerunner to a modern police State, the ex-director of the so-called Police Department, Lopukhin stated the following: ”Given its lack of elementary scientific notions of law, given its acquaintance with public life only as it manifests itself within the walls of military academies and regimental barracks, the whole political outlook of the ranks of the Corps of Gendarmes boils itself down to the following propositions: that there are the people and there is state authority, that the latter is under constant threat from the former, for which reason it is subject to protective measures, and that to execute these measures by any means may be used with impunity. When an outlook such as this happens to coincide with a poorly developed spirit of service responsibility and the lack of sufficient intelligence to make sense of complex public occurrences, then observations based on this outlook confine themselves to the external manifestations of these occurrences and fail to assimilate their inner meaning. Hence, every occurrence assumes the character of a threat to state authority. As a result, the protection of the state as carried out by the Corps of Gendarmes turns into a war against all of society, and, in the final analysis, leads to a destruction also of state authority, whose inviolability can be assured only by a union with society. By widening the gulf between state authority and the people, it engenders a revolution. This is why the activity of the political police is inimical not only to the people; it is inimical to the state as well.” (pg. 32-3) An esteemed constable of Czarist ’justice,’ Lopukhin wrote these words in his famous book, Настоаящее и Будущее Русской Полиции, which he published in Moscow on the second anniversary of the 1905 revolution. Lopukhin’s famous book celebrates its 120th anniversary during the fifth anniversary of the Ukraine war.

loser () • In an analysis of the Federal debt at 40 trillion US dollars on August 20th, 2026 FOX Business’ Dagen McDowell (January 7th, 1969), an American anchor on the Big Money Show, described how lenders to the Federal government are ”losers.” McDowell, a fiery red head with thin lips, could hardly disguise his disgust at the Federal government, as her nostrils flared violently when she exclaimed how ”[you] are a loser in lending money to the Federal government.” McDowell decried the intervention that Secretary of the US Treasury, Scott Bessent implemented to save long term yields on US Treasury Notes, whose rising price reached historic highs on August 19th, 2026,[248] claiming ”desperation is the world’s worst smelling cologne.” A polite way to denigrate Bessent, McDowell’s statement is equivalent to claiming Bessent’s policies at the US Treasury stink. Who would want to smell them in the first place? McDowell, who is a notable conservative libertarian, represents a section of America’s ruling elite, whose traditional support for the Republican Party, has disintegrated, as the US economy has. During the show, McDowell repudiates Larry Kudlow’s claim that yields rose in response to the US economy becoming more robust. McDowell argues that neither 1.4 trillion US dollars in interest payments nor a fiscal deficit would be the defining hallmarks of the US economy, if the US economy were so robust. McDowell's repudiation of Larry Kudlow represents a major turning point within the voting base for the Republican Party, whose disregard for conservative libertarians like McDowell is manifest in President Donald J Trump's administration of the US economy.

---

[248] The Wall Street Journal, for instance, published an article, describing how the ”Yield on 30-Year Treasury Bond Tops 5.3 percent” (August 17th, 2026).

M

M1 Abrams () •

On January 25th, 2023 Reuters reported that the US agreed to send 31 Abrams tanks to Ukraine, the sum total of which amounted to no less than 400 million US dollars.[249] Originally provided to empower Ukraine's military "to maneuver in open terrain," the tanks did not improve Ukraine's maneuverability. During Ukraine's Spring but subsequently Summer counteroffensive, Ukraine failed to breech the so-called Surovkin lines, representing a major defeat for Ukraine's military. Ukraine did not even deploy the tanks during the Summer counteroffensive, indicating that Ukraine switched the purpose for which these tanks were originally procured. Originally intended for breeches, Ukraine repurposed the M1 Abrams for defense rather than offense.

After decimating the Ukrainian army's ammunition-starved 110th Mechanized Brigade in detail on the ashes of the ruined village of Avdiivka in the eastern Donbas, the Russians wiped out an M1 Abrams tank company in Berdychi (See Berdychi) where Ukraine's 47th Mechanized Brigade suffered so many losses as to be rendered combat ineffective during the battle there.[250] In the immediate aftermath of the battle for Berdychi in the Avdiivka direction (See Directionality in the Ukraine War), Ukraine subsequently required the 47th Mechanized Brigade to reconstitute deep behind the lines of combat in western Ukraine. By April, Ukraine's fleet is reported to have lost more than five M1 Abrams tanks. By September 14, 2024 Ukraine's fleet of 31 M1 Abrams tanks, many of which the US Department of Defense (See Department of War) did not or could not rapidly retrofit for combat on the Pontic Steppes, dwindled to no more than 24.[251] Ukraine withdrew these seven tanks for retrofitting, at which point Ukraine's military began to publish photos with factory-standard steel cages to thwart Russian drones that Ukraine's the Metinvest Group (See Pokrovsk). Additional modifications include Kontakt-1 explosive reactive armor (ERA) tiles added to both turret as well as the hull.[TO DO]

Ukraine's 31 M1 Abrams tanks draw into sharp relief three important conclusions about Ukraine, Ukraine's military and its military doctrine. The first is that reliance upon foreign shipments of heavy military equipment requires immediate retrofitting for deployment on the Pontic Steppes. The second is that Ukraine's need to retrofit foreign heavy military equipment challenges its ability to align its force structure with doctrine for meaningful battlefield combat effectiveness. Finally, Ukraine's challenged ability to retrofit foreign heavy military equipment seriously undermines its ability to deploy manpower or material in time to train the units equipped with either to effectuate a change of state on the battlefield. The M1 Abrams therefore symbolize the crisis Ukraine's military faces against Russia. Russia, whose heavy military equipment is specifically designed for the Pontic Steppes for integration into a military force trained for warfare there empowers Russia to engage effectively in combat with a significant change of state on the battlefield, battle by battle. Russia's ability to align its force structure with its military doctrine is one of the primary reasons Russia conquered not only Avdiivka but the subsequent villages (i.e., Berdychi, etc...) in the eastern Donbas during the exceedingly long, bloody, incremental slog after Ukraine's failed Summer counteroffensive.

[249] ["In change of course, U.S. agrees to send 31 Abrams tanks to Ukraine."], ["U.S. to Send 31 Abrams tanks to Ukraine, in major reversal," Politico. January 25th, 2023]

[250] David Axe (See David Axe) noted that in the initial phases of the battle for Berdychi, Ukraine's 47th Mechanized Brigade lost more than three of its 31 M1 Abrams tanks. ["In Berdychi, Ukraine's M-1 Abrams Tanks Made Their Last Stand—And Halted The Russian Advance," Forbes. March 7th, 2024]

[251] ["Ukraine pulls US-Provided Abrams Tanks from the Front Lines over Russian Drone Threats," AP. April 25th, 2024], ["US Tanks Weren't Ready for Russian Attacks. Ukraine Has a Fix." The Hill. September 12th, 2024]

Oliveira do Mouchão () •

Macleod, Alasdair () • A part of the formidable team Egon von Greyerz, assembled to sell gold or space in the vault for its storage, Alasdair Macleod published an article on October 31st, 2014 under the title, "China's Gold Strategy," where Macleod not only claims the US, Great Britain, Europe, but the West en toto sold its reserves of gold or other precious metals to China, a country which had, during the course of the intervening years from 1983 onward, accumulated more than 50,000 tonnes of gold, the largest reserve of gold in the history of mankind, laid the foundation for its ambition to pull the rug out from under the United States. Macleod's article, surprisingly brief, is one of the most important articles published in the 21st century. It is the first reasoned explanation of an accurate estimate of China's globally overwhelming reserves in precious metals.[252]

Mad Max () • In an article published on April 6th, 2024 under the title, "Ukraine's 'Mad Max' Trawls Swamps and Minefields for Shells," the Wall Street Journal explained how Ukraine's ammunition shortage became so acute that an Ukrainian soldier, who hunts for Russian shells, became an important supplier for some units.

Magura () • The highest expression of drone warfare on the open seas is the Ukrainian Magura. No weapon has wielded more power on the battlefield than the Magura, since no weapon has accomplished what the Magura has accomplished. In the aftermath of Bakhmut-Artemovsk, the Ukrainians lost complete control over the Black Sea. Shortly after losing control, the Ukrainians fought their way back by constantly iterating on the Magura drone, improving specific features until Russia lost more than half of its Black Sea Fleet, withdrawing the remainder to the port city of Novorossisk in Russia, far away from the Ukrainian Magura drones. The Magura drones represented one of the most sophisticated threats to sea vessels in the history of warfare. The Magura's ability to strike larger, more expensive, time-consuming constructions like ships such as corvettes, frigates, destroyers, etc... represents the essence of the drone threat, the ability to cause an enemy such irreplaceable loss that its restoration, several times the cost of the drone, takes more time than is feasible for its effect to impact the outcome of the war.

---

[252] Declassified U.S. State Department documents from 1943 outline proposals for selling American gold to China to combat inflation during World War II that could have served as the initial inspiration for American politicians to sell America out from underneath Americans' feet. See a telegram from Foreign Relations of the United States, Diplomatic Papers, 1943, China; 893.5151/945: Telegram, "The Chargé in China (Atcheson) to the Secretary of State" dispatched from Chungking, July 17, 1943—1 p.m. but [Received July 21—3:58 p.m.] 1209. TF–141. From Adler to Secretary of Treasury only. State Department's 882, July 9,37 part II; also a telegram from Foreign Relations of the United States, Diplomatic Papers, 1934, The Far East, Volume III ; 811.515 Silver/21: Telegram, "The Secretary of State to the Consul General at Shanghai (Cunningham) Washington, September 22, 1934—noon. 227. Your 372, August 20, 5 p.m.

O Malho () • O Malho, a Brazilian weekly satirical magazine published from 1902 to 1954, based in Rio de Janeiro, Brazil, became the first commercially successful Brazilian satirical magazine during the Republican regime.

Angelo Agostini's illustration titled Assassination of Mr. Plehve, Minister of Interior is published in the Brazilian satirical magazine, O Malho in 1904, specifically in Issue No. 99. Released shortly after the assassination on August 6th, 1904, Angelo Agostini's illustration represented a high watermark in the satirical artwork of the in the revolutionary epoch preceding the 1905 Russian revolution.

Manhattan () • Qinghai is a province in China where the Talatan solar project is constructed. With enough power to provide energy to every household in Chicago, the project boasts 16,930 megawatts. During the Ukraine war, it continued to expand. In fact, it is still expanding, adding panels with a target of growing to 10 times the area of Manhattan in three years.[253] Another 4,700 megawatts of wind energy and 7,380 megawatts of hydroelectric dams are nearby. Manhattan is useful benchmark. In contrast to China, America, whose inability to build large scale infrastructure projects is optimized in California's more than two decades on a rail project without a single line of track, builds data centers without solar projects. While data centers are expected to account for 8 percent of all U.S. power by 2030, America's insistence on leveraging the existing electricity, which is in a downward death spiral, for improving AI leaves little reason to have faith in its ability. Meta's planned 5-GW data center in Richland Parish, Louisiana, known as Hyperion, for instance, is expected to ultimately exceed the size and energy demands of just lower Manhattan alone. It is easy to see that in a situation where the Chinese are expected to generate three times the size of Manhattan with the Talatan solar project, America has no plan but to add to a decrepit electricity grid an additional data center less than the full-size of Manhattan.[254]

mannequins () • Alongside the undergrowth, rats eating the Caesar's corn wires, stones, Mad Max, and the fog over Pokrovsk, Steve Rosenberg's article on mannequins, hyperinflation for fines, and Russia's 35 new articles in the Criminal Code is a definite hallmark in the journalism on the Ukraine war. Describing the situation in Russia after the United States sanctioned Lukoil and Rosneft on October 22, 2025, Steve Rosenberg, the BBC's Russia correspondent, posted a tweet to X with a video on November 17th, 2025.[255] In the video Rosenberg displays the inner page of a famous Russian tabloid, Московский Комсомолец, with a picture of mannequins, stripped, bare naked, save the leggings. Above the picture of the mannequins is a title that reads: Без Одежки Протягивай Ножки. Below the title, the subtitle reads: В России закрылся каждый второй магазин одежды и обуви. The cover of the newspaper derides the Russian tourism industry for trying to sell a trip to the Taiga for the price of a Turkish holiday.

The crescendo, however, comes not from the mannequins but from a critique of Russia's гиперинфляция штрафных санкций. Rosenberg reads the following lines: Скорее всего о проблеме дефицита госбюджета на судебных процессах представители обвинения рассказывать все-таки не будут. Однако понятно, что дело, похоже, как раз в этом. Вместе с тем если решать оперативную задачу повысить содержание золота в яйцах, которая, очевидно, имеет несколько вариантов решения, путем фактического уничтожения дающих эти яйца куриц, то это, как представляется, так себе государственная политика. These lines, discussing what are hardly statistics or hard numbers, illustrate how sanctions have begun to harden Russia's domestic policies.

[255] [BBCSteveR:1990481916949062026]

Manstein, Erich von, the 2nd Conquerer of Sevastopol () • Since neither a Roman nor a n Ottoman commander captured the Cimmeria before Prince Grigory Aleksandrovich Potemkin-Tauricheski, Erich von Manstein, the Nazi general, became the 2nd Conquerer of Sevastopol after the city fell on July 4th, 1942. History, however, may call the general the first conquerer, since Manstein is the first to conquer the city, established by Catherine the Great, after its Russification into a naval fortress to assert her Empire's control over the Black Sea.

Manstein conquered the Cimmeria with his personal dedication to one of the underlying principles of Blitzkrieg. He observed how the battle, which had raged for the better part of a year, began to tip the scales in the Nazi's favor.[256] At precisely the moment when the scales began to weigh more heavily on the Nazis's side than the Soviets', Manstein commanded elements of his 11th Army to make the improbable possible with a cross-channel raid on Severnaya Bay where the Soviets estimated the chances for a successful attack to be highly improbable. In a reverberation of Manstein's sense for the appropriate place at the most opportune time like his modification of Fall Gelb's plan to pass through the Ardennes on May 10th, 1940, Manstein's correct appreciation for Napoleon's advice to maneuver according to circumstance prevailed.[257]

Marcus, David () • David Marcus's A Manual of Akkadian is a key to unlocking the secrets of the Akkadian language.

---

[256] During World War II, the U.S. Army's Military Intelligence Service initiated a series of reports on the Axis' powers. Among these reports is one dedicated to The German Armored Army. The author expounds on the core tactical doctrine of German armor, explaining how "both from a tactical as well as from a strategical point of view, the selection of the maneuver to be carried out must always be inspired by the desire to disconcert the enemy command through its very boldness and rapidity. If necessary, 'what seems most improbable must be accomplished at the improbable place,' as remarked an officer of the staff of the 1st Armored Division in justification of the maneuver at Sedan." The author continues, stating: "By spectacular and even horrible combat methods, one must annihilate any will to resist on the part of the enemy. The fury of the "Stukas," the whizzing of their bombs, the din of their machine guns, the onrush of the tanks, the thunder of their march and of their fire, the spurt of the flames from the flame throwers, the explosion of melanin charges, everything must be brought into play to affect the morale of the combatant and give him the impression of an "apocalyptic" scene." Published on August 10th, 1942, Special Series № 2 is one of the U.S. Army's first explications of the Nazi's lightening warfare. What is fascinating about the term is just how flexibly its composition rendered absolutely new concepts to the German lexicon. In a depiction of the unbelievably expurgated cartography of Nazi campaigns from a book published in 1942 in Mŭnchen, Germany, under the title, Der Krieg in Karten: 1939/1941, the word Blitzsieg comes to define the outcome of the battle over the Balkans from April 6th to the 30th, 1941 for the editor, Giselher Wirsing. Under the title, "Der Blitzsieg auf dem Balkan" (pg. 24), an abstract depicts a lightening victory "aus dem Handgelenk heraus." The German word victory, Sieg, rhymes with war, Krieg, indicating how the flexible nature of the German language accorded with dynamic concepts of German warfare, easily creating new terms.

[257] It stands to mention that one of the unmentioned principles of Blitzkrieg is harmony. In the Special Series № 2, the author emphasizes how "it would be an error to compare one weapon with another. Far from encouraging rivalry among the various weapons, the new organization has developed their harmonious association, and utilizes the motor to give them previously unrealized possibilities of speed. Armored weapons (light or heavy), infantry, artillery, engineers, signal communications, not to mention the air forces-all these arms contribute to the common aim: overcoming the adversary by an irresistible assault, followed by a complete destruction."

Over the years, Sevastopol witnessed fewer conquerers than Jerusalem, the famous center of the world.

The Strait of Messina () • While many straits such as the Strait of Hormuz or the Strait of Malacca[258] featured prominently in conflicts around the world such as the illegal war of aggression against Iran Donald J Trump launched on February 28th, 2026, the Strait of Messina rose in significance not so much for its passage or its relation to global trade but for explanation. The Strait of Messina is a narrow passage between the island of Sicily and the "toe" of Italy's "boot." In Ancient Greek mythology, incredible monsters hovered above either side of the strait, imperiling passage with unequivocally and equally unforeseeable danger and disaster. Scylla, a female monster with six snake like heads, whose sharp teeth shimmered in the dark, barked like a dog from the rocks on the Italian side, while in an exploitation of Poseidon's power over the sea, Charybdis, on the Sicilian side, swallowed such massive amounts of water as as those which whipped up fantastic whirlpools of such immense centripetal force three times a day as virtually to impede passage on that side altogether. In his attempt to sail through the Strait of Messina, Odysseus[259] encountered disaster from both monsters simultaneously.[260]

McKay, Charles () • Charles McKay's book, Extraordinary Popular Delusions and the Madness of Crowds, celebrated its 170th anniversary when Russia expanded its seizure of the Crimea (See Crimea) on February 24th, 2022. Arguably the greatest book on human psychology, McKay's book chronicles a few of the greatest events in human history such as the Tulip mania. These are the Mississippi Scheme, the South-Sea Bubble, the Tulipomania, the Alchymists, Modern Prophecies, Fortune-Telling, the Magnetisers, Influence of Politics on Hair and Beard in the first volume, and The Crusades, the Witch-Mania, the Slow Poisoners, Haunted Houses, Popular Follies of Great Cities, Popular Admiration of Great Thieves, Duels and Ordeals, Relics in the second volume. In his preface, McKay describes how "[men], it has been well said, think in herds; it will be seen that they go mad in herds, while they only recover their senses slowly, and one by one." (p. vii)

If not for any of the memoirs but on Tulipomania, McKay's book is a classic on hysteria.

McCollum Memo () • McCollum

Metinvest () • According to the CEO of Metinvest, Oleksandr Vodoviz, Ukraine failed to produce a single ton of steel during an entire week in September, 2026, which fell during the Fourth Anniversary of the Ukraine war. Vodoviz claimed that zero weekly output resulted from Russian strikes, destroying Ukraine's metallurgical enterprises. While Ukraine's government under Zelensky's military junta offers 60,000 US dollars in compensation per company, Vodoviz decried the insignificant sum of money, noting that a furnace costs no less than 500 million US dollars. Vodoviz claimed, "The State has no plan" for restoring big business. Vodoviz claimed that Metinvest, which has exploited Ukraine's male population to fight Russia for its investments, has no plans to restore destroyed facilities because of the uncertainty associated with the Ukraine war. In an interview published on September 9th, 2026,[261] Vodoviz stated: "Друге – це порти. Ми наразі не вивозимо, не експортуємо, хоча до 2026 року були найбільшим експортером в країні. І третє рішення, як би не було дивно, – це наші європейські друзі-партнери, які повністю закрили нам експорт металопродукцій. Вони ввели CBAM, вони ввели квоти. І при цьому обіцяли нам, що цього не буде. Ми були і на переговорах і з Міністерством євроінтеграції, і з Міністерством економіки. Але ЄС все рівно ввели."

---

[258] [TO DO]

[259] In a grotesque degradation of the original Homeric Iliad, contemporary filmmakers have reduced Odysseus to the hours of Alexander, a spectacle on film without even the possibility of a comparison with such great renditions of antiquity as Ben Hur or the like.

[260] The path the historically exhausted role of the US Federal Reserve chose during the Fourth Anniversary of the Ukraine is like the Strait of Messina, for neither a sovereign default nor a debasement are anything short of disaster. President Donald J Trump's sock puppet, Federal Reserve Chairman, Kevin Warsh must balance the disasters from Scylla with those of Charybdis to pass through the current period of America's historic decline. With interest payments on the Federal debt exceeding 1.25 trillion by the end of the fourth stage of the Iranian war (See " Forty Day War & Aftermath")coupled with rising yields on US Treasuries, both Scylla as well as Charybdis have prepared a wonderful shipwreck for the United States that is just only a matter of time now.

MK Ultra () • The exposure of MK Ultra hardly scratches the surface of the Central Intelligence Agency's anti-American activities. Even though Seymour Hersh's journalism prior to MK Ultra resulted in a denunciation of the CIA's illegal activities on domestic American soil, the CIA persisted.[262] The CIA is not permitted to operate, conduct, or engage in operations on Americans on American soil. It is against the law. The National Security Act of 1947, for instance, prohibits the agency from conducting domestic surveillance or law enforcement activities against U.S. citizens on American soil. Designed to protect civil liberties, the law clearly separates foreign intelligence from domestic law enforcement.

Revealed in 1979 when an ABC News "Close Up" program, a type of programming that ran from 1973 to 1988, aired a three-part report with reporter Paul Altmeyer called "Mission: Mind Control," the program revealed a secret CIA program launched in the 1950's in which thousands of subjects were given experimental doses of LSD called the MK Ultra Project.[263] The MK Ultra Project became a 30 year search for perfect mind control where the aim of the program "controlling an individual to the point where he will do our bidding against his will or against the instinct of self-preservation." Although Paul Altmeyer makes no mention of the National Security Act of 1947, his report on the MK Ultra Project provides more than enough information to recommend the conclusion that the CIA paid little to no attention to American law, let alone the National Security Act of 1947.

Many outrageous revelations arise from Paul Altmeyer's report. Among the most outrageous revelations in the report is an admission by one of the leaders of MK Ultra that the CIA placed doses of LSD into the water supply of a city so as to induce specific behaviors in the city people.[264]

The report details how the MK Ultra experiments represent not just a bold, foolhardy, senseless loss of American taxpayer money on illegal activities but a reflection of a profound personal crisis with the objective of intelligence in the agency. Despite the prevalence of an alleged nuclear threat from the spread of communism, for which the Truman's foreign policy of Containment could have easily legitimized investigation, the agency abandoned research into communists for a preoccupation with dilettante's addiction for practical psychology, a pimp's manpower over women, or an obsession on drugs the most addicted narcotics officers could probably have never rivaled in usage, discovery, or sales. The conclusion one must reach from the MK Ultra is that the CIA is not an intelligence agency ready to plunge into the depths of the obscure, mystic or esoteric sources of knowledge "to protest America or Americans" but an aimless source of funding for Americans whose life no longer holds any meaning but for entertainment from boredom or midlife crises.[265]

---

[261] Ситуація в ГМК катастрофічна: у нас розбито 5 печей, у АМКР – дві, метпідприємства зупинені – топменеджер "Метінвесту"

[262] Seymour Hersh's early journalism into the Federal government's deployment of the CIA against anti-Vietnam protesters resulted in the exposure of Operation Chaos. Operation Chaos sought to catalogue the identity of anti-Vietnam protesters so that the Federal government could target these Americans for retaliation. Despite Seymour Hersh's exposure of Operation Chaos, the CIA continued on American soil with MK Ultra.

[263] The first two parts of the report are easily accessible; the third part is apparently missing.

[264] The admission that the CIA poisoned a city's water supply bears contemporary relevance for the Federal government's deployment of Immigration and Custom's Enforcement agents to the State of Minnesota. Could the Federal government have poisoned the water supply in Minnesota with drugs designed to induce the loss of inhibition so that ICE officers would clash more frequently with the State's residents than they would, had their water supply not been poisoned? Is the loss of inhibition in the State's residents a behavior the Federal government has sought to induce for an experiment designed to discern the limits of crowd control by classes of law enforcement like ICE during a crisis? What could the impending crisis be?

Russia's Military Industrial Courier () • One of the most informative newspapers in the history of Russia, Russia's Military Industrial Courier (i.e., Военно-Промышленный Курьер or ВПК), largely unread by the Russian population itself, contains a wealth of information on Russia's transformation of the Russian military from Putin's ascension to power to days within the beginning of its full-scale invasion into Ukraine. The newspaper details nearly every aspect of the Russian military from the first publication to the last. It contains an unparalleled wealth of information on geopolitics. One of the themes the newspaper addresses in a series of articles spread across its years of publication is the rise of China against the fall of the United States.[266]

A triple or quadrule entendre, the К in ВПК reminds Russians of two names important for the history of the Russian military: the Military-Industrial Commission of the USSR (Военно-Промышленная Комиссия) or VPK (ВПК) and the Russian Military Industrial Complex (Военно-Промышленный Комплекс)) or VPK (ВПК) but an even earlier antecedent is the Военно-промышленные комитеты or VPK (ВПК) the Russians set up during World War I to supply the the Czar's Imperial Army.[267]

In a country famous for its newspapers, Russia's Military Industrial Courier easily stands out. It compares without a doubt to the great Russian newspapers. Newspapers such as Iskra (i.e., Искра)[268], VperyodВперёд)[269], IzvestiaИзвестия)[270], PravdaПравда)[271], Bulletin of the Left OppositionБюллетень оппозиции)[272], or TassТАСС)[273] are but a few of the most notable newspapers famous in the history of Russia. Military Industrial Courier takes its place among these newspapers.

A history of its publication with the number of editions following their year runs from 2004 to 2022, totalling more than 900 editions over a little less than 20 years 2004 (№ 1 - 50), 2005 (№ 1 - 49), 2006 (№ 1 - 50), 2007

---

[265] George White, a white, Ivy League, middle class cavalier psychopath without a conscience capable of questioning the ultimate aim of his escapades, epitomizes the CIA's lack of soul searching. Retired to Stintson Beach, California, he summarized his career in a letter to his supervisor at the CIA shortly before his death, writing: "It was fun, fun, fun; Where else could a red blooded American boy, lie, kill and cheat, steal, deceive, rape, and pillage with the sanction and blessing of the All Highest."

[266]

[267] In the aftermath of the terrible defeats the Russians faced on the Galician front in April 1915, a congress of war-industries committees convened from July 25th to the 27th, 1915, to address the rising shortage of munitiions in the Imperial Army.

(№ 1 - 50), 2008 (№ 1 - 50), 2009 (№ 1 - 50), 2010 (№ 1 - 50), 2011 (№ 1 - 51), 2010 (№ 1 - 50), 2012 (№ 1 - 51), 2013 (№ 1 - 50), 2014 (№ 1 - 48), 2015 (№ 1 - 49), 2016 (№ 1 - 49), 2017 (№ 1 - 49), 2018 (№ 1 - 50), 2019 (№ 1 - 50), 2020 (№ 1 - 50), 2021 (№ 1 - 50), 2022 (№ 1 - 11). The newspaper stopped publishing new editions after the beginning of Russia's full-scale invasion. The newspaper published its last edition during the third week (15th to 21st) in March 2022. The website where the newspaper published its editions began to throw a 404 error only a short time later.The Military Industrial Courier is no longer available online. Copies of the newspapers are extremely hard to procure. Only a few of the greatest collectors maintain archives. These archives are largely extent with copies of each edition of the newpsaper for every publication. While the great archives usually do not stock newspapers (which is one of the deficiencies of private archives[274], the newspaper is available, though rarely ever, online for download through Torrent files.[275]

The Military Industrial Courier signaled the beginning of the rise of Russian military bloggers, the most significant of which is the so-called Rybar (i.e., Рыбарь). The transition, especially from the Military Industrial Courier to channels of information such as Rybar's, makes the process for compiling archives of information important for the 21st century a level of difficulty higher than previously imagined. The new process relies on Telegram channels, websites, or social media posts on X; these are incomparably more complex than .pdf copies of editions of a single newspaper like the Military Industrial Courier. The transition thus makes for a less complete, more fragmented archive.

The Minimalist Program () • Developed by Noam Chomsky in his last iteration of his system of generative grammar, the Minimalist Program is one of the most fascinating curiosities ever developed in the scientific study of language. In the wake of its immediate debut, a number of linguists leveled important critiques against the program, the most famous of which Shalom Lappin wrote in 1997.[276] Chomsky, who intolerantly refuses to respond in kind to critiques, has simply ignored Lappin's critique for the better part of three decades, demonstrating how academia is less about the emendation of the intellect, reason, or Enlightenment than about the preservation of powerful, ideologically aligned, irrationally committed groups of scholars who are ready to champion a leader's framework than subject that framework to the rigors the framework itself requires in its application to its subject of study.

The problem the Minimalist Program faces is similar to the problem the greatest contributors to the study of being face at the end of the Renaissance. The inherent assumption that grammar is innate is akin to that of Descartes' in his famous statement: cogito, ergo sum. AI, however, obliterates Chomsky's Cartesian dualism[277] with the production of grammatically sound sentences. It should be that a new program based on the idea that language reaches its unity within society rather than individual speakers giving rise to a greater reflection of the nature of speech and reality. In program where speakers are but a part of a whole, the reduction of a speaker's grammar such as a Spanish speaker's developing intuitions for English grammar naturally clash with those of native English speakers, whose speech is subject to the societies in which he or she is most active. The new program for an examination of grammar rests on setting Chomsky's own minimalist program up against itself so that the historical residues of a language like the English's use of Latin neuter nouns continues to impose the Latin case system on English in much the same way that the Germanic monosyllabic English verbs, all of which are irregular with an unpredictable stem vowel change, still exert influence over English verbs. Setting up individual grammars up against each other such as a Spanish speaker's developing intuitions for English grammar against those of a specific community will bring put the Minimalist

[274]

[275] The author is in possession of the entire stock of the Military Industrial Courier.

[276] Johnson, D., Lappin, S. A Critique of the Minimalist Program. Linguistics and Philosophy 20, 273–333 (1997). [?] Lappin's critique signified the end of the days when large telecommunication companies like AT&T, Bell Laboratories, or the IBM T.J. Watson Research Center employed Ph.D. graduates to conduct research into the study of subjects related to communication, representing the end of an era in America's history of telecommunications. Neither AT&T nor Bell Laboratories continue to employ Ph.D. graduates. It is a shame, since the practice produced great work like Lappin's critique of the Minimalist Program.

[277] A celebration of Chomsky's Cartesian dualism is the auditorium at Eindhoven, the Dutch Republic of Letters, where Noam Chomsky debated the famous French philosopher, Michel Foucault on October 22nd, 1971 at 7:30 p.m. The Eindhoven University of Technology's auditorium, the host states in the documentary of the debate, contains glass, "the inner and outer world blended together." He explains how during the broadcast, unique to modernity for its audacity, "you could see traffic outside passing by. Symbolic, indeed," the host says, "because the relationship between inner and outer world is central to the first half of the fourth philosophers debate about human

---

nature and the ideal society." During the debate, Foucault espouses a fully Cartesian point of view when he separates human thought from the history of ideas, as though people haven't ever had any ideas, or, at least, no one who could think hasn't thought without them. Foucault, the narrator says, does not associate "the history of thought ... with the history of ideas or even the development of the mind, but rather it should be understood as discontinuous transformations," as though an Epicurean atom in Lucretius struck another suddenly giving rise to the advent of a new structure in society but without the underlying forces of nature drawing one electronegative atom to another in a bond like water. Foucault's discontinuous transformations transition "from one network to another."

In the debate over the individual, however, the narrator raises a question for these Cartesian dualists, the likes of which is relevant to the 21st century. He asks: "To what extent is the individual able to discover something new - and, if so, how should we make sense of this?" The question is point, since humanity rather than any individual, despite reports to the contrary, has uncovered a huge treasure in the form of Artificial Intelligence. The discovery of Artificial Intelligence, hardly on the minds of these two interlocutors at the time of the debate, is not "something new" an individual can discover by himself or herself but the product of a massive transformation not only in humanity itself but in human society. The productive forces, the likes of which have not been higher than they are now, have come together after an arduous series of trials and errors to produce a consortium of different products (such as the computer, Alternating Current) coordinated to supply mankind with the one thing it champions for its distinction from animality: reason. To the extent that the systems for Artificial Intelligence such as the competitors have created have sought nothing but reason, the ability to discover something new such as AI is a human endeavor. It is not the result of Alan Turing's "Computing Machinery and Intelligence," a paper published before the creation of Large Language Models, but humanity's. If humanity is responsible for AI, then the implications for Cartesian dualism, for Descartes' own Cogito, ergo sum could not be any less significant then as now. In terms of humanity's achievement, the Time magazine, which is interested less in truth than propaganda, has assembled as list called "The Architects of AI" for 2025 where the list focuses on the people America's ruling elite have selected to deliver messages about AI than about the actual truthfulness of its generation. (i.e., December 11th, 2025) The magazine shamelessly omits the hundreds of thousands, if not millions, of working class developers whose keystrokes, software, problem solving skills, or eight hours of work per day held the entirety of the Magnificent Seven on their backs like the Titan celebrated for holding up the heavens, Atlas.

Foucault's critique of the history of science is therefore a supremely ominous forecast of the Platonic state of man, especially now for AI. Foucault says: "Within the traditional history of science, the creativity of individuals has been accorded maximum importance. The history of science up until recently essentially consisted of showing how an individual, whether it was Newton or Mendell, had been the creator rather than discoverer of reality that was already existing in things and in the world, a reality that no other person had previously discovered. I believe the postulate that lies at the core of the traditional history of science is that truth exists in order to be known. Yet the human mind, due to the effect of a number of inhibitions or obstacles, has not managed to see this truth. The mind is made to see the truth and a contingent obstacle is impeding him to see it." Foucault's explanation is thus a modern reiteration of Socrate's Allegory of the Cave from Plato's Republic. (514a-520a, Book VII) While he has a different explanation for the different type of chains holding the uninitiated at the bottom of the cave, Foucault's emphasis on the sun's light draws him back to Ancient Greece.

Program into motion.

mite, a () • In his beautifully crafted long essay, Penseés, Blaise Pascal has the following to say about a mite[278]: "But to show him another prodigy equally astonishing, let him examine the most delicate things he knows. Let a mite be given him, with its minute body and parts incomparably more minute, limbs with their joints, veins in the limbs, blood in the veins, humours in the blood, drops in the humours, vapours in the drops. Dividing these last things again, let him exhaust his powers of conception, and let the last object at which he can arrive be now that of our discourse. Perhaps he will think that here is the smallest point in nature. I will let him see therein a new abyss. I will paint for him not only the visible universe, but all that he can conceive of nature's immensity in the womb of this abridged atom. Let him see therein an infinity of universes, each of which has its firmament, its planets, its earth, in the same proportion as in the visible world; in each earth animals, and in the last mites, in which he will find again all that the first had, finding still in these others the same thing without end and without cessation. Let him lose himself in wonders as amazing in their littleness as the others in their vastness. For who will not be astounded at the fact that our body, which a little while ago was imperceptible in the universe, itself imperceptible in the bosom of the whole, is now a colossus, a world, or rather a whole, in respect of the nothingness which we cannot reach? He who regards himself in this light will be afraid of himself, and observing himself sustained in the body given him by nature between those two abysses of the Infinite and Nothing, will tremble at the sight of these marvels; and I think that, as his curiosity changes into admiration, he will be more disposed to contemplate them in silence than to examine them with presumption."

Mikhailovitch, Marianna () • Described as a witch, Marianna Mikhailovitch is accused of a crime America's corporations commit on a daily basis in contract after contract, provision after provision, service after service.

"."

Ludwig von Mises () • Ludwig von Mises is responsible for the " subjective" theory of value. The subjective theory of value is an apprehensive rather than a comprehensive theory of value, for the theory requires the subject to act. Since the action becomes an external cause, the "subjective" theory of value can account for the action as an internal but not an external cause. In terms of philosophy, Mises suffers from no less from dualism than Descartes. The lack of action as an external causes the so-called "Austrian School of Economics," whose entire tradition is nothing more than an objection in a footnote to David Ricardo's labour theory of value, to suffer so severe a limitation as to be totally incapable of explanation. Mises explains neither the history of labor nor labour history of labor. Mises, for instance, cannot explain how the concept of a strike developed in the history of the class struggle, since neither exists for Mises; Mises cannot explain either so neither exist. Workers, who strike, are those workers whose idea of objective self-consciousness does not align with the idea of subjective self-consciousness. Collectivity, for instance, completely defies the idea that perception might be responsible for prices, since not only do individuals, who have no identity in a class for Mises, have no influence on prices individually, their collective action is immeasurable for Mises, for collective action of any kind is ex hypothesii. If collective action manifests perception for price, then the perception is a result of the collective action but collective action is objective, since the collectivity is external to the subject. The "Austrian School of Economics" cannot advance past logic. It is completely irrational from any point of view. Mises fulls the gap when a conversion of Jesus Christ into the invisible hand fails to dissuade Christians that economics is separate from religion just like the State. If applied to bourgeois economists, Mises cannot explain how the fulfillment of ready predictions arise from a comparison of two values, the one unrelated to the other. A technical analysis that the SPX divided by the M2 money supply predicts a crash in the stock market for SPX at 8,200 with at a specific amount for the M2 money supply cannot be related to a "subjective theory of value," for no subject dictates the relationship. If compounded by the fact that a variable for private credit has already withdrawn from the equation for lack of redemptions at private equity firms such as Citadel, Blackrock or Blue Owl, the problems Mises faces in logic compound.

---

[278] Is Pascal's remark about a mite at all related to a line from Surah Al-Baqarah Ayat 26 in the Holy Quran?

Monsters () • A fascinating short book on monsters is a dictionary with a small set of entries coupled with short descriptions.

() • In his essay, Об Эстетической Природе Фантазии, Ильенков relates marble to gold. He writes: Точно так же — хотя это и менее очевидно, — обстоит дело и с формами созерцания, представления, вообще способности отражать мир в образах. При их исследовании от физиологии и анатомии органов придется отвлекаться так же строго, как и политической экономии от физико-химических свойств золота и серебра при анализе денежной формы стоимости. От физиологии как таковой они зависят так же мало, как формы Венеры Милосской — от химического состава мрамора, из коего статуя высечена. In a footnote to his remark, Ильенков writes: Другое дело — и это должно составить предмет особого разговора, что денежная форма стоимости предъявляет вполне опре деленные требования к материалу своего воплощения, выражения. В данном случае наиболее подходящим материалом оказывается золото. Аналогичное отношение можно установить и между формами античной скульптуры и мрамором. Они также «естественнее» всего воплощаются в мраморе, но ни в коем случае не возникают,не развиваются из мрамора, из его свойств.

N

Nader, Ralph () • Ralph Nader is an American politician who delivered an adage on politics. He said: " If you're not turned on to politics, politics will turn on you." If Ralph Nader had not said this adage, he would be virtually unknown to modern man.

Nadler, Steven () • Steven Nadler is a biographer of Baruch Spinoza (1672), a great expositor of his life, times in the Dutch Republic of Letters, and philosophy during the Enlightenment.[279] Spinoza describes man thus: "In man, in the form of man, in his person, Nature itself thinks, and not at all some special substance, source, or principle instilled into it from outside."

---

[279] During the second anniversary of the Ukraine war, Jonathan Israel published his own biography of Baruch Spinoza. Published on September 25th, 2023, Spinoza, Life, and Legacy added to the recent biographies on the philosopher.

nationalization of American gold () • Roosevelt made ownership of gold bullion and gold coins illegal for residents of the United States on April 5th, 1933, and all gold holdings in excess of US 100 were made subject to compulsory surrender to the US Treasury. Americans lost the right to own gold for more than 41 years, 8 months, 26 days excluding the end date. On December 31st, 1974 American citizens received the right to own gold. The fiftieth anniversary of the American right to own gold coincided with the second anniversary of the Ukraine war. The fact that the US forbid Americans from owning precious metals is a greater travesty of the Great Depression than prohibition during the 1920s.

Die NfO () • Die Nachrichtenstelle für den Orient

Namibia () •

Nambia, the site of two of the largest sources of highly coveted uranium, is fast becoming one of Africa's flashpoints in the struggle for access to, control over, or exploitation of the yellow metal. Both majority owned by the Chinese, the Husab and Rössing provide China with profits from or a large, consistent, steady supply of uranium, uranium oxide, or uranium based products.

Husab is the world's largest open-pit uranium operation. the third largest uranium producer globally, Husab's ownership structure differs from Rössing. Nine tenths of the mine belong to Husab Swakop Uranium (Pty) Ltd. China's General Nuclear (CGN) owns HSU. Responsible for no less than 54 percent of China's nuclear power with 28 nuclear reactors generating 33 gigawatts, CGN's interest in the extracts of uranium oxide from Husab is primarily for domestic Chinese consumption. One of the richest uranium assets on Earth, The Extractor claims Husab is the world's second largest uranium mine, "producing 3,300 tonnes of uranium and contributing around 7 percent of global output - trailing only Canada's Cigar Lake." (July 25th, 2025)

Rössing, an open-pit uranium mine, is the largest of its kind in the world for area; with a spread at 180 square kilometers, the mine utilizes no more than 20 kilometers for mining, waste disposal, or processing. Located in the Namib Desert near the town of Arandis, 70 kilometers from Swakopmund, the mine is the longest running in the country. In 2019, Cina's National Uranium Corporation acquired the majority shareholding in Rössing Uranium. Published in 2024, the company's Sustainability and Performance Report provides statistics on production. In 2022, Rössing Uranium mined approximate 2, 205 tonnes of uranium; increasing output the next year, Rössing produced 2, 462 tonnes. Undisclosed amounts produced for the second and third anniversaries of the Ukraine war underscore the rising importance Chinese mines in Africa have in light of the shifting balances of power. In 2022, Rössing Uranium extracted 2,920 metrics tonnes of uranium oxide, compared to 2,659 metric tonnes in 2022, indicating a significant increase in production. Computed in Namibia's dollar, the company earned 4.84 billion Namibian dollars in 2022 but topped that amount in 2023 with

---

[280] A residual benefit the Chinese reap from its harvest of uranium in Namibia is the ability to provide graduate students, post-graduate students, scientists, researchers, or university adjuncts, professors or tenured professors direct access to the mines for further study. A recent example is an article entitled, "Uranium and U-Bearing minerals in the Husab uranium deposit in Namibia: Occurrence, composition, age, and implications for uranium mineralization process." Published in Volume 182 of Ore Geology Reviews during July, 2025, the article not only reaffirms Chinese expertise in geology but expands that knowledge substantially with its analysis of uranium in the Husab uranium deposit. The Chinese are thus able to produce academic studies, transforming the mine from an open-pit into a research center. Chinese research from mines like Rössing in Namibia not only advance Chinese geology, mining, or mining technology for its mines; it raises China's global academic profile, adding more publications to its name. Rössing therefore demon-

6.48 billion in 2023, demonstrating a nearly two billion Namibian dollar increase.[280] Distinguished from Husab, Rössing is serviced almost exclusively by freight. While the mine relies chiefly upon Toyota and Komatsu (i.e., Japan) for its light and heavy equipment, TransNamib, which specializes in the transportation of bulk and containerized freight, serves the mine, demonstrating China's not only in mines but in its logistics, a byproduct of China's long-term strategy for logistics in Africa with rail for its Silk Road. TransNamib transport uranium by sea.

In response to the rising awareness the scarcity and rising demand and amid skyrocketing prices from and the challenging requirements for a global supply chain the Ukraine war brought to uranium and its price, both mines reached significant milestones during the war's first anniversary (2023). In 2023, Rössing announced plans to extend its operations well into 2036, demonstrating China's long-term strategy for mineral extraction off the south-eastern coast of Africa. In an event, Husab Uranium celebrated its 10th anniversary, marking over a decade of operations. The event highlighted its contributions to the local economy in Namibia's Erongo region; important for the development of Sino-Namibian relations, the event is significant not just for Sino-Namibian relations but also for Chinese relations in Africa on the whole; other countries in Africa view a successful venture in another with equal or rising optimism for opportunities. During the third anniversary of the Ukraine war, the combined total of these two mines produced no fewer than 5, 600 tonnes of uranium. This milestone marked Namibia's emergence as one of the most significant global uranium exporters in a world now seething with competition among great powers for access to, control over or exploitation of the yellow metal.

NATO's borders () •

() • Towards the end of the fourth anniversary of the Ukraine war, Новая Газета collapsed.

Novagold () • Novagold purchased Donlin Gold, [281]

North, David () • A genius with a mark of distinction in history, politics and economics, an eloquent orator, David North, the long time leader of the Socialist Equality party, is a master of deceit, an undercover agent like no other in the history of domestic espionage, responsible for the transformation of the Federal Bureau of Investigation from merely an anti-Communist agency directing actions against communists suspected of ties to the U.S.S.R. into an conspiratorial agency with full control over public opinions unacceptable to modern American authoritarianism. Deployed initially as an agent of the Fourth International, whose entire history from Leon Trotsky's death to the present is a history of the agency's infiltration,[282], David's North contributions to Marxism, even though he is an agent, are unmistakably valuable to the Trotskyist movement.

The works he produced before

---

strates how the Chinese not only mine mines for the yellow metal but for insights, knowledge, or understanding.

[281] [”’We will now control over 40 million ounces of resources’: Novagold CEO,” BNN Bloomberg. July 23rd, 2026.]

[282] Since the National Security Act of 1947 is de facto inapplicable to the Central Intelligence Agency, the FBI is indistinguishable from the CIA for an external observer. The Trotskyist movement plays host to agents from both or more of the Federal government's agencies. The Socialist Equality Party's own early documents, many of which have silently disappeared from the WSWS, detailed how a CIA agent led the party leadership prior to North's ascension to power. While the exact trajectory would require several hundreds of pages to flesh out, the pattern is predictable. The ascension of a new agent follows the new agent's denunciation of the old's agent's agency so that the new agent's denunciation legitimizes not only his ascension but provides a cover for his or her own affiliation with the denounced agency. It is a brilliant scheme. While North contrived many brilliant schemes, he inherited the denunciated ascension.

his last treatise on the Zionist genocide[283] are contributions to the study of Marxism in the 21st century. While the political context of these works is extremely complicated due to North's employment by an agency of the Federal government, these may be divided into three categories.[284] The first is North's defense of Leon Trotsky against the so-called post-Soviet school of historical falsification. The second is North's defense of Marxism against the post-modern critique of Marx by Adorno. The third is North's exposition of the breakdown of the capitalist crisis leading up, on, or after the 2008 collapse of Lehman Brothers. While the political context for these three categories differs wildly, the reason these categories of contributions are still valuable is twofold; the first is that these are orthodox critiques; the second is that an advanced member of the working class firmly grounded in the history, politics, or economics of Marx has the intellectual power to advance past North's contributions to objective consciousness.[285] It must be said that in the years prior to North's ascension, the last major contributors to Marxism were only those with a personal knowledge of Trotsky such as Max Shachtman, Trotsky's translator for The Russian Revolution. North's contributions thus represented the first major, orthodox, post-Trotsky Marxian contributions, despite North's entanglement with the State. Lenin predicted North's entanglement with the State in his book, Imperialism, the Last Stage of Capitalism. He explained how the profits yielded from the processes of concentration under imperialism empower businessmen with the ability to brive native politicians, labour leaders or the labour aristocracy (the upper stratum of the working class) into submission so that the labour serves to subvert rather than execute a worker revolution.[286] While Lenin's explanation of capital preceded the major events in private central banking, the likes of which even Trotsky failed to analyze in detail in his criqitue of America in the foreword to Marx's Das Kapital[287], Lenin's explanation may be extended to the processes of concentration that shifted power away from America's industrialists to private central bankers in the immediate aftermath of America's rise to power after World War II when America's economy became the World Power. Writing just before the rise of Franklin Deleanor Roosevelt, Trotsky could have hardly been aware of the far-reaching consequences of America's much earlier decision to reject William Jennings Bryan for Woodrow Wilson's Secretary of the U.S. Navy for private central banking.

---

[283] Neither Israel itself nor Israelis can be held responsible for Netanyahu's decision to decimate the Gaza Strip not merely on a factual basis but from the perspective of Marxism. North's analysis is not a Marxist analysis; a Marxist analysis requires the application of class; the working class, for instance, cannot be held responsible for an atrocity the Israeli ruling elite committed. North's decision to attribute the Zionist genocide to the State of Israel thus represents a fundamental break with his outstanding previous work in the field of Marxist analysis.

[284] One might claim that North's decision to launch the Socialist Equality Party's or the predecessor Workers' League's newspaper on the Internet through the WSWS may have been an important contribution to Marxism. North himself exaggerates the decision's importance. While the publication is certainly important, the idea became so widespread in the late 90s that had North never sought to publish on the Internet a fellow member of the party or else a supporter, enthusiast, or Marxian write would most certainly have.

[285] The problem with the second reason is that the agency's aim for North's employment is not to inspire objective consciousness but to accomplish a number of important goals simultaneously. The agency seeks to establish a monopoly on Trotsky so that no competing political party may usurp the power North's Trotskyist party wields. The second is to provide the semblance of opposition; the authenticity of North's contributions attack prospective members, whose life is then registered into a database under a secret protocol the Federal government maintains to quell opposition to the policies North's SEP gaslight; the secret protocol is like the FBI's COINTELPRO or the CIA's Operation Chaos; the secret protocol subjects the prospective member to total police State surveillance (emphhenceforth TPSS) so that he or she never manages to assume leadership of North's SEP or the Fourth International, while a secondary motive is to provide a pseudo legal basis for a vast money laundering conspiracy that pays for architecture, training, or salaries of agents responsible for the TPSS. The third objective is to sell information about prospective members to foreign governments, even those non-allied, unfriendly, inimical governments with one or more foreign policy the U.S. rejects, denounces, seeks to alter or abolish, in accordance with a globally agreed upon protocol among the ruling elite to prevent the expansion of international rivalry into uncontrollable warfare. While the authenticity of the contributions contradictions the agency's aims, its exploitation provides a number of benefits, not the least of which its effect on the ruse.

[286] [Bowles, Paul.(2007) Capitalism, Pearson: London. pp. 91–93]

[287] A survey of translations available during 19th century Russia made on information related

A great admirer of Karl Lueger (1844 - 1910), the former mayor of Vienna, Austria, North modeled much of his concept of orchestration on Lueger's manipulation of social hatred. Much like tempering, orchestration seeks to exploit politically polarized issues with a carefully calibrated media spectacle or series of media spectacles so that the responses to

---

to private central banking indicates just how unavailable major works in economics were. The earliest translation of Adam Smith's Wealth of Nations appeared no earlier than 1802; disparaged, the translation is now considered lost. P. A. Bibikov published the second translation in Russia in 1866. Although a copy would have theoretically been available for the earliest members of the Russian labor movements to read, there is no guarantee on the availability of Bibikov's translation. Even so, Smith's understanding of private central banking is as dissembling as it is advanced. It is hardly the case that the early Russian revolutionaries like Lenin or Trotsky might have picked up on the role of private central banking from Smith's metaphors prohibiting the suspension of commerce or industry from "the Daedalian wings of paper money" (Wealth of Nations II.ii.86) in the hands of private banks. A clue to the Bolshevik understanding of banking comes from the work great Russian revolutionaries like David Ryazanov completed as the head of the Marx and Engels Institute he founded shortly after the October revolution. During his time at the institute, Ryazanov produced one of the first Russian translation of David Ricardo's works: Рикардо Давид. Начала политической экономии и податного обложения. Перевод и вступительная статья Рязанов Д. Институт К. Маркса и Ф. Энгельса. Отпечатано в 1-й Образцовой типографии Гиза. Тираж 4000 экз. М.-Л. Государственное издательство. 1929г. 368 с.. The translation, however, contains no reference to the famous analysis Ricardo produced in his work entitled, The High Price of Bullion: A Proof of the Depopulation of the Country (1810). In the aforementioned work, Ricardo wrote: "The public, or the Government on behalf of the public, is indebted to the Bank in a sum of money larger than the whole amount of Bank notes in circulation; for the Government not only owes the Bank fifteen million, its original capital, which is lent at 3 per cent interest, but also many more millions which are advanced on Exchequer bills, on half-pay and pension annuities, and on other securities. It is evident, therefore, that if the Government itself were to be the sole issuer of paper money instead of borrowing it of the Bank, the only difference would be with respect to the interest: the Bank would no longer receive interest and the Government would no longer pay it; but all other classes in the community would be exactly in the same position in which they now stand." By the time Ryazanov published his translation of Ricardo's major contribution to political economy, Stalin's political genocide had already started, preventing Ryazanov, if not anyone else, from continuing to research the origins of economics, even though research into Ricardo reveals just how deeply the debate between the Махисты and Деборинцы penetrated into the renaissance of Marx and Engels Ryazanov initiated, as both camps were preparing to debate monetary policy. As И. Михалвеский, one of the cothinkers to Lenin's first appointed Kommissar of Financial Affair, I. Stepanov, an outspoken Махист, for instance, prepared a foreword to Берковский Бернард's major study on the subject in the 1930s in response to the revisionist influence from Durkheim, Weber, and Simmel on Dr. Herbert Block's Die Marxsche Geldtheorie (c.f., Московский Промышленно-Экономический Институт им. А. И. Рыкова. — Москва: Государственное Финансовое Издательство Союза ССР, 1930. — 136 с. — (Труды Финансового Факультета. Выпуск I) v. Block, Herbert. Die Marxsche Geldtheorie. Jena: Gustav Fischer. 1926.) where a discussion of Ricardo is referenced. (See . . . - . "— № 8 . ". A comprehensive study of Marx's idea of gold may be found in a book with an identical title: З. В. Атлас. Деньги и Кредит (При Капитализме и В СССР) М. Государственное Издательство. (1930).) Marx himself did leave a clear explanation of the relation capital bore to the money supply, banking or the State. While Marx considers gold, or any other commodity backing, to be necessary no more than "in the imagination" (i.e., [Marx, K. (1970), A Contribution to the Critique of Political Economy, Moscow: Progress. pg. 70]), the actions of the state (ibid., pg. 72) determine the widespread acceptance of a given unit of account "purely [by] convention." Marx's point of view is thus congenial to Ricardo's about the " sole issuer of paper money" but only by implication. Although the Bolsheviks adopted the Czar's monetary policy, the literature on early Soviet monetary policy seemingly produces no example for its justification from Marx's works. Hardly anything at all is written about the Kommissars of Financial Affairs, let alone their monetary policies.

these issues (i.e., like abortion or Israel) may be papered in such a way as to sway voters from one candidate to the other just before a major election. The deployment of Immigrations and Customs Enforcement to Minneapolis, Minnesota has provided, for instance, a series of media spectacles over the politically polarized issue of reasonable suspicion allow these issues to be papered in such a way as to sway voters before the November, 2026 midterm elections; the Socialist Equality Party, for instance, utilizes a critique of an article in one of the major three corporate controlled newspapers to apply a pseudo-marxist analysis in such a way that radical readers of the newspapers turn away from the corporate controlled media's critique to the SEP's critique, while less radical readers, who may or may not be familiar with the concept of ”reasonable suspicion” channel opposition to the Republican party through the Democratic party. Opposition is thus canalized into one or more direction; in terms of the SEP, the direction is to the State itself but through the police State bureaucracy's protocol against domestic extremists; in terms of the corporate controlled media, the direction is to the Republicans through the Democrats. In either case, opposition is canalized into a direct under the control of the ruling elite in such a way that no opposition develops that is not under its control. The ultimate aim of orchestration is to guarantee authoritarianism, as Hannah Ardent described in her famous book on the subject. In her book, The Origins of Totalitarianism,[288] Ardent presented the definition of authoritarianism with two elements. These are as follows: ”These forms of domination differ basically from other kinds of dictatorial, despotic or tyrannical rule; and even though they have developed, with a certain continuity, from party dictatorships, their essentially totalitarian features are new and cannot be derived from one-party systems. The goal of one-party systems is not only to seize the government administration but, by filling all offices with party members, to achieve a complete amalgamation of state and party, so that after the seizure of power the party becomes a kind of propaganda organization for the government. This system is ”total” only in a negative sense, namely, in that the ruling party will tolerate no other parties, no opposition and no freedom of political opinion. Once a party dictatorship has come to power, it leaves the original power relationship between state and party intact; the government and the army exercise the same power as before, and the ”revolution” consists only in the fact that all government positions are now occupied by party members. In all these cases the power of the party rests on a monopoly guaranteed by the state and the party no longer possesses its own power center.” Orchestration[289] is necessary to provide the illusion that the United States is not a one-party State but just as under Spinoza neither thought nor extension (AT VIIIA 30-31, CSM I 215) are two but one substance, the two dominant parties in the United States but modes of one Substance, differing primarily in the tactics they exploit to shift the working class in ” perpetual movement” from one direction to another. The one-party of private central banking (which the SEP calls the party of big business) are both dedicated, for instance, to guarantee the continuation of Alexander Hamilton’s corruption scheme to compel the Federal government to become indebted to private central bankers like Robert Morris through the sale U.S. Treasury Bonds whose interest the 16th Amendment extracts surplus value from workers to pay at a rate equivalent to more than 75 per cent per dollar. The amalgamation of the party and the state is thus embodied in the commitment to Federal indebtedness. The toleration for no party other than the one party of private central banking is exemplified in the exclusion of third party candidates from U.S. elections, a process the Socialist Equality Party stages through its own participation. The realization of authoritarianism by orchestration or other means thus preserves the American ruling elite’s continued rule over the United States.

---

[288] A counter argument to totalitarian authoritarianism in Hannah Ardent's book is the idea of ” modern Constitutional authoritarianism” where the executor of a State such as a President merely tightens the controls on all aspects of the government's authority over the citizenry so discretely through a veneer of law that the citizenry cannot but stare at the State through a new glass wall. The problem with ”modern Constitutional authoritarianism” is the same problem with Hannah Ardent's own definition of authoritarianism. Trotsky's critique of the Union of Soviet Socialist Republics is just as relevant here for authoritarianism as for the inner party struggle the Bolsheviks led after the revolution. Trotsky's belief that a refusal to revert inner party control from bureaucratic to democratic socialism would necessarily cascade so that the party's collapse would cause the State's is as much a fiscal critique as it is a political analysis. The money required to maintain authoritarian forms of rule, is less relevant for regimes like the Union of Soviet Socialist Republics than the United States. The United States has exceeded the police State bureaucracy the U.S.S.R. set up with the KGB many times over. The U.S. has hundreds of agencies, tens of thousands of commissions, offices, departments, bureaus, or corporations but none have accomplished anything for the country, except to drain the treasury. An NSA agent's salary, deployed to a target or not, is anywhere from 100,000 to 175,000. If a group is attached to a target, the operation on the target can range from anywhere to half a million to a million dollars, depending on the number of agents. Surveillance is thus extremely expensive. Neither Hannah Ardent nor others have really looked at the numbers on modern police State authoritarianism's requirements for surveillance. See an article Foreign Policy published on January 19th, 2026 under the title, ”America's Drift Toward Constitutional Authoritarianism,” where the author completely omits any discussion of surveillance, the sine qua non of authoritarianism, or its expenditures (all of which are subject to public disclosure under Article 1, Section 9, Clause 7 of the U.S. Constitution). The idea of ”modern Constitutional authoritarianism” is neither a species nor genera of the Ardent's, since the fulfill of her two elements solidifies the application of her definition. Whether the means of authoritarianism are legal (i.e., The Nuremberg Laws from 15 September 1935) or not is nothing more than a discussion of means. It is not a discussion of ends.

Orchestration, however, is not the only means of mass manipulation North developed. North developed the concept of Engel’s cycle. In his reading of Dialectics of Nature, which is the subject of a single entry, North emphasized how the crises of capitalism are no less terminable than the universe. North relied on Engel’s preface. In his preface, Engel’s describes how the destruction of the universe gives birth to the universe all over again in a perpetual cycle. Opposed to communism, North believes the crises of capitalism can be so manipulated as to preserve an aspect of the ancien regime for the future regime from one collapse to the next through the imposition of an expanded Stalinist anti-Trotskyist police state bureaucracy beyond the KGB's wildest imagine (i.e., the modern American police State bureaucracy with the Federal Bureau of Investigation, the National Security Agency, the Central Intelligence Agency, the Department of Homeland Security, the Cybersecurity and Infrastructure Agency, so on and so forth) so that the revolutionary party (the Socialist Equality Party), employed by one or more of these agencies, may stand in place of a genuine opposition during a revolution, foment revolution when revolution comes, or, if necessary, hold the ancien regime over, unless or until a new, perhaps even more reactionary, regime takes over on the smoldering ashes of the ancien regime, thereby exploiting the banner of the Fourth International for the construction of reactionary provisional governments, political bridges from one thoroughly destructive, reactionary, anti-Enlightenment regime to the next endlessly in an Engel's cycle. [290]

---

[289] One of the tools in orchestration which the members of the Socialist Equality Party have adopted is Debord’s so-called détournement, ”which involves using spectacular images and language to disrupt the flow of the spectacle.” A most recent deployment of Debord’s so-called détournement is the SEP’s decision to exploit the orchestrated, or, if he really did die, real death of Alex Pretti ”to disrupt the flow of the spectacle” on ICE in Minneapolis, Minnesota, shifting the social outrage away from the overthrow of the American capitalist system to the abolition of ICE by means of a ”general strike.” The disruption to the flow of the ICE spectacle thus assumed the character of mass movements with mass movements staged throughout major cities over the course of a week with sophisticated social engineering tools on social media, politically debased pseudo-left parties like the Democratic Socialists of America, the Socialist Equality Party (where the elite orchestrators occupy high-ranking titled positions with publications under name or nom de plume), or Party for Socialism and Liberation, and Hollywood trained actors, grey ghost agent saboteurs, or aesthetically pleasing leaders like Abby Martin, who is married directly into the police State bureaucracy. Employed to create a documentary on the Pentagon, Martin frequently appears on the Central Intelligence Agency’s latest news outlet, Breakthrough News. In terms of leadership for the masses, Abby Martin, for instance, looks really good so hearing her feels even better when she says: ”I’ve never had more revolutionary optimism than I do right here [in Minneapolis]...Let’s get ICE the f*ck out of our country!” It represents the so-called ” aesthetic component of socialism” derived from one of the members of the Frankfurt school of post-Stalinist falsification. Alex Pretti’s Debord’s so-called détournement thus transformed the content of the orchestration from random acts of reaction into a social movement under the Federal government’s control or within the tentacles of the great octopus of Federated, centralized, technologically advanced agencies whose self-expressed aim is to suppress the Bill of Rights in their entirety.

David North's legacy is complex. His complexity exceeds the most complicated Marxists in the history of Marxism. Lenin, for instance, thoroughly discredited Parvus, for his corruption of Russian social democracy but unfairly without any redemption. In terms of Plekhanov, Lenin drew a line separating Plekhanov's periods of development. Lenin regarded Plekhanov to be a progressive contributor to the theoretical understanding of Marxism in the years preceding the split World War I caused at the last meeting of the Second International when Plekhanov voted in favor of Russian war credits, prompting Lenin to publish one of the pamphlets studied least of all within the circles of the Socialist Equality Party.[291] Lenin, however, condemned the later Plekhanov for his decision to side with social-chauvinism for imperialist war. In terms of David North, the situation is far more complex than Parvus (whose influence ultimately led to Trotsky's theory of permanent revolution) or Plekhanov where the lines are hardly blurred. The damage North has accomplished with the decision to advance the Central Intelligence Agency's adoption of the Master of Deceit's predelicition for the exploitation of communism into an instrument for the State seals his fate forever. While North's contributions must be viewed only on an individual basis, North is nothing more than the most crowning achievement of the Frankfurt School of Marxism, the most professional, elite, accomplished Architect of American, if not Western Decline. His historical legacy will be regarded ultimately with negativity, despite his contributions to reactionary modern statecraft.

What about Who is David North? David North's earliest history may be traced to the 1970s. David North was born David Green. The son of a wealthy, successful, American businessman, North attended college at one of the unofficial group of small, academically competitive private liberal arts called the ”Little Ivy.” The ” Little Ivy” was Trinity College, a private liberal arts college in Hartford, Connecticut. Founded as Washington College in 1823, it is the second-oldest college in the state of Connecticut. Coeducational since 1969, the college has enrolled no more than 2,235 students a year. Offering 41 majors and 28 interdisciplinary minors, Trinity College is where David North first began to study history as a major. While studying history, North overthrew the editorial board of the college's newspaper, the Trinity Tripod. North became editor. Under his editorship, North is alleged to have acquired a reputation for ”dishonesty and black of journalistic integrity,” according to a document an agent of the police State bureaucracy leaked to the author.

---

[290] The Sri Lanka revolution, where the North's SEP developed strong ties, is a perfect example of North's execution of an Engel's cycle on the Sri Lankan people. The Sri Lankan people, clueless about either the SEP or the incoming Sri Lankan regime, witnessed an Engel's cycle without a clue. It is profound achievement in politics. Not only did the Engel's cycle succeed but North's execution of the Engel's cycle, no doubt supported by the expanded Stalinist anti-Trotskyist police state bureaucracy, occured without a single line of conscious opposition. The Sri Lanka revolution is thus a model, a subject of study right now for all agents associated with David North's political device, for repetition in the United States, if not around the world.

[291] In a country whose more than two and half centuries is a history of war, the idea of social-chauvinism or social pacificism are hardly sufficient to gaslight the rampage, mayhem, or nihilism America's war machine has perpetuated (i.e., Afghanistan). The exclusion of Lenin's pamphlet, The imperialist war : the struggle against social-chauvinism and social-pacifism, 1914-1915, is thus just as much a political decision as a part of the party's political decision making. An emphasis on programmatically invertable works such as the Results and Perspectives (for coup d'états) or Imperialism: The Highest Stage of Capitalism (for capital, monopoly, or annexations) advances the party for gaslighting far more than a craft for the purity of a political commitment to Marxism during the death agony of capitalism.

A report from the Trinity Tripod dated October 31st, 1969 indicates that David Green, 71', advised by Dr. George Cooper, the head of the History Department, received a major breakthrough for his career in politics with Cooper's help. Cooper recommended Green work Senator Vance Hartke. Named, Rupert Vance Hartke (May 31, 1919 – July 27, 2003), Senator Vance Hartke, served as a Democratic United States Senator from Indiana for several sessions of Congress, spanning the period of the Vietnam war, from 1959 until 1977. Known as a hard-working, ”liberal” Democrat with a strong relationship with Senate Majority Leader Lyndon B. Johnson, Hartke lobbied for programs such as Medicare and Medicaid, supporting the Civil Rights Act of 1964. Hartke wrote three books, Inside the New Frontier (1962) The American Crisis in Vietnam (1968), You and Your Senator (1970), all of which are important for David's Green's intellectual development. Hartke agreed to Cooper's recommendation. North began serving in the office staff of Senator Vance Hartke. Described by a Dean Winslow as a ”sort of internship,” North's work ”[involved] a study of Washington political structure and activity with an eye towards a career in politics.”

While not exactly an ”internship,” Hartke tapped North to head the launch of a major conspiracy against the First Amendment in American politics. While Hartke worked together with Johnson, Hartke's lesser known affiliations are with the Federal Bureau of Investigation (FBI). Described as a ”powerful force” and ”giant” in Congress in the 1960s, Hartke's membership in the Senate Foreign Affairs Committee provided with access to advanced political conspiracies both the FBI and the Department of State began to plan in response to the rising tide of social unrest in the United States over the Vietnam war. While the exact name of the FBI's political conspiracy for David North's internship project is yet unknown, North believed the internship changed his life.

According to North, by November 15th, 1969, ”virtually nothing remained of my earlier hopes that the Democratic Party represented a progressive, let alone socialist, opposition to imperialism.” That day he claims to have purchased a copy of Isaac Deutscher's first book in a three volume set dedicated to Leon Trotsky, ”The Prophet Armed.” Overnight, North supposedly transformed from a liberal to a follower of Leon Trotsky, except North's following of Leon Trotsky became an integral part of his service in the FBI and State Department.

In January 1971, the Trinity Reporter said: ”For example, senior David Green of Kew Gardens, N.Y. went to Washington D.C., where he interned in the office of Senator Vance Hartke of Indiana.” The newspaper went on to describe the internship in the following way. ”The result was that he fit in so well that six other senators wrote the college for student interns.” It is unknown whether or not members of North’s former alma mater became Northern followers. By no coincidence at all, David Green suddenly became David North, establishing himself as a leader in the Trotskyist movement. With the help of his friends in the Federal Bureau of Investigation, North ascended to the leadership of the Workers League. David’s meteoric rise through the ranks of , first as Labor Editor of the Party’s paper, The Bulletin, then later, in 1976, the group’s leader, could not have happened without willing hands from deep within the police State bureaucracy’s vast, sprawling, ever widening network of agents.

Corresponding with North’s meteoric rise is the fact that Hartke developed plans with the FBI and the State Department whose exposition is revealed through a carefully crafted omission. In November 1971 when North began his internship with Hartke, the FBI refused to include the Worker’s League alongside the Socialist Workers Party and Spartacist League in its Administrative Index, the so-called ADEX index of ”threats to national security.” When ADEX was started in 1971, it was made up of people who were formerly on the Security Index, Reserve Index, and Agitator Index (i.e., labor leaders). Maintained at two separate locations at the headquarters of the Masters of Deceit, the ADEX was discontinued in January 1978 for obvious violations of the First Amendment right to free speech.[292] The Workers League’s omission from the ADEX thus highlights the advanced plans Hartke, North, the FBI and the State Department implemented to sack the First Amendment from the people.

The plan, whose successful completion is the embodiment of North’s accomplished political career, sought to overthrow the labour movement so that rather than reacting to struggles, the overthrown labour organizations, some of which would be created as needed, some of which would be subverted as needed, would ”orchestrate” the development of the class struggle. North’s contribution came not only from his role in the leadership but in his role in the implementation of post-modernist techniques derived from a close reading of such authors as the ones he denounced in the books he published to maintain the ”simulacrum” of a ”revolutionary” party.

Bored with the doldrums prior to the Iraq war but elated by the concentration of power amassed from the advent of the police State bureaucracy’s exploitation of technology for a “Greater Marxism,” the pseudo-left orchestrators in the deep state began the intellectual orchestration of the debates on the Frankfurt school of Marxism and the French neo-utopian Derrida-ists around the time David North began publishing its first articles in 1998 on the newly founded World Socialist Website, a portal whose manifestation as a moment and element in, coincided and supported the beginning of what is now, the modern American police State bureaucracy where the evisceration of the Bill of Rights has arisen from a complete overthrow of the U.S. Constitution not by a “security elite” but the financial interests of private central bankers.

---

[292] A famous member of the ADEX, whose speeches are taught in elementary schools, whose likeness is minted onto American coins, or whose history of tenacity, grit or work earned a month in February dedicated to his heroism, is Martin Luther King Jr. The ADEX describes MLK Jr. as ”[an] established civil rights leader [who] has acquired national and international status. Professes to adhere to philosophy of non-violence but past actions have provoked civil disobedience. On 8/14/1967 publicly committed SCLC to program of massive civil disobedience. Has publicly denounced U.S. participation in war with Vietnam.” There can be no doubt that the under Hoover’s conception of a ”Master of Deceit” that the Federal Bureau of Investigation is one of the leading, if not the leading, cause of American’s decline.

Beginning in 1998, the WSWS published a number of articles that would form the basis for the unfolding debate. [293] Articles from the WSWS, the vast majority of which are exceptionally well written, demonstrate a level of erudition, scholarship, and knowledge uncommon for a gang criminal ruling elites with an axe to sharp for the bowels of the Trotskyist movement. Among these articles are Steiner's and Brenner's contributions to Marxism and Trotskyism. These articles, whose publication marked the beginning of the intellectual orchestration, sparked the discussion about "membership" in the Socialist Equality Party. In his rejection of Steiner's and Brenner's request for "membership," North lashed out, staging the beginning of the debate. [294]

---

[293] Some of these are of profound historical value not least of all for the CIA's involvement in the Trotskyist movement but for that reason alone their significance for the failure of U.S.-led NATO's expansion eastward into Ukraine before the death of the collapsed dollar during the Epstein spectacle is invaluable (i.e., Published ten years ahead of the CIA's bloody Maidan coup d'état in 2014, the following article exemplifies the Brzeziński's explanation of Ukraine as one of the five pivots, the "arsenal of the former Soviet Union," and the "danger of a bloody civil war or partition of the country along ethno-linguistic lines" into sharp relief: ["U.S. Intervenes in disputed Ukraine election: Who the hell asked you, Mr. Powell?" WSWS. November 30th, 2004]); the first and last project of these Brzeziński-ists has and always was and will never be again the subjugation of Ukraine and the revivified implementation of Operation Barbarossa and Operation Unthinkable to a successful outcome for the interests of U.S. imperialism, at least to the extent that some of the self-professed Marxists engaged in spectacles like these do not secretly denounce their personal involvement in a backhanded manner of debasement or resentful cryptic sabotage (which is entirely possible, given not only the enormity of the failure but the incredible range of ideas at work for the Big Lie in what can only be described as a Ringling Bros. and Barnum Bailey Circus). The primary reason the U.S.-led NATO expansion eastward into Ukraine failed is encapsulated in the Alexander Vindman's discussion of his wife's fertility treatment rather than the consequences of America's inability to effectuate the realization of its political ambitions on the world scene. A fundamental failure of the nature, purpose, or objective for Ukraine pervades the American ruling elite's execution of its stratagem and conspiracy. The WSWS's article, "Thirty years of war: The historical background to the US-NATO conflict with Russia" (2026), is an excellent rendition of three decades in the "Neighborhood of Make-Believe," an empty stage in a Commedia dell'arte troupe of geopolitics. [Vindman, Alexander S. (August 3, 2021). Here, Right Matters: An American Story. Harper.] To solidify the point about Vindman, one need only quote David North's primary theses from Steiner's and Brenner's critique of dialects: "The consequences of the ICFI's alleged neglect of the dialectic found expression in its (1) failure to recognize the urgent need for a revival of utopianism as a means of rekindling socialist consciousness, and (2) indifference to the problems of psychology and sexuality. For Steiner/Brenner, the latter play a decisive role in shaping political motivations and orientation that, they maintain, are essentially irrational. By concentrating on historical explanations, political analysis and programmatic clarification, the International Committee failed to confront, according to Steiner/Brenner, the psychological barriers to socialism that resided in "the repressed feelings of the unconscious" which persist in a human being's "congealed, unexamined past." ["North, David. "The Frankfurt School vs. Marxism: The Political and Intellectual Odyssey of Alex Steiner." Part 1. WSWS. October 22nd, 2008] The obsession with sexuality, fertility, the female are epitomized in the orchestrators' debate. Rather than focusing on an analysis of the objective reality of capitalist development, the CIA's agents let the lights out. It is really important for everyone to understand how Hartke's and North's Workers' League project for the new American police State bureaucracy, whose now vast, sprawling, ever widening expansion has trampled and is trampling on the Bill of Rights for no benefit to America's geopolitical standing on the globe, thoroughly undermined not only the trade-off (domestic rights for geopolitical power) but the exploitation of the worker's movement for espionage. This is a fundamental critique. It should be understood from the results of the Ukraine war first and foremost. The release and frayed dispersion of the Epstein's file is a détournement on this obscene spectacle that serves as further confirmation of this settled fact.

[294] The following is an attempted chronology of the debate on Frankfurt school of Marxism and the French neo-utopian Derrida-ists that the pseudo-leftist Marxist agents orchestrated over the better part of a decade: 1998 ; [Walsh, David, "The Aesthetic Component of Socialism," World Socialist Website. January 3rd, 1998] ; 1999 ; 2003 ; [Frank Brenner, "To Know a Thing Is to Know Its End: On Why Utopia Is Crucial to a Revival of Socialist Consciousness" Permanent Revolution, May 2003.] ; 2004 ; [Alex Steiner, "The Dialectical Path of Cognition and Revolutionizing Practice: A Reply to David North," Permanent Revolution, March 8th, 2004.] ; 2006 ; [Frank Brenner and Alex Steiner, "Objectivism or Marxism: A Letter to the International Committee of the Fourth International," Permanent Revolution, May 2006.] ; [North, David. Hegel, Marx, Engels and the Origins of Marxism. Lexington Books (2006) 280 pages. 0739110470, 0739113046]

North is an expression of De Leonism is his subversion of De Leon's understanding of global trade unionism; while North has seldom, if ever, managed to orchestrate a binational labor event, coordinating workers in the U.S. with those in a different country, the subversion of De Leon's major ideas of trade unionism serve as one of the many facets in on the FBI's conspiracy against labour. Exploitation of De Leon's idea of a "trade union" is now an integral part of the exploitation of labor in America. The purposeful orchestration of shifting blame onto trade unions for imposing "sell-out" contracts on defiant workers over the SEP organized rank and file committees's "objections" is the FBI successful integrations of decades of socialist advocacy into a coherent, though now entirely exhausted, conspiracy the suppression of labour (i.e., an illegal activity). The conspiracy combines De Leon's trade unionism with Leon Trotsky's denunciation of 'trade unionism' (called absenteeism) where the latter denounces the former openly, while secretly the left shakes the right hand. This is not without consequence, however. Any deprivation of a citizen's rights has immediate and irreversible consequences for the State, especially its institutions. The FBI's suppression of labour has had severely negative consequences not just for the workers but for entire industries; companies for which the FBI has sabotaged defiant workers have been able to proceed without a shred accountability, leading to situations where entire areas of the economy are now black holes for accountants. The Pentagon, perhaps the best example, is the center of the largest black hole in the American economy. Just in terms of shipbuilding alone, a dollar in America accomplishes less than a two hundredth of what the same in China accomplishes; it is not just that China has a shipbuilding capacity at 200 times that of the U.S.; it is that China is

---

Although the orchestrated debate touched upon the great ideas at stake in the Frankfurt School of Marxism, the incomplete account of history stemmed from the lacking appreciation for the roaring 1920s. In at least one of his most curious works, Deborin published a Russian translation of Oswald Spengler's Der Untergang des Abendlandes (English: The Decline of the West), the analysis of which figured prominently into Theodor W. Adorno's understanding of history. In his commemoration of Oswald Spengler's 70th birthday (i.e., [Adorno T., (1982), Spengler after the Decline in Prisms (Trans. Nicholsen and Weber), MIT press, pp. 51–72]), Adorno openly declared how he wanted to "turn (Spengler's) reactionary ideas toward progressive ends" for which neither György Lukács nor Max Horkheimer, both revisionists mentioned during the orchestrated debate, gave no quarter in their critiques of Spengler's Lebensphilosophie. While the interlocutors touched upon many members of the Frankfurt School of Marxism, the lacuna on Sprengler is a serious concern, for in a discussion directed primarily at dialectics, Spengler's deterministic view offers a distinct counterargument to the idea that in the absence of a rational universe there is no method. In his foreword to a Russian translation, the great philosopher, A. M. Deborin, rightly denounced Sprengler for "полное единодушие." ([Шпенглер, Освальд (1880-1936). Закат Европы [Текст] / Освальд Шпенглер ; с предисловием А. Деборина ; перевод Н. Ф. Гарелина. Образ и действительность. — Москва : Изд-во Л. Д. Френкель; Петроград : Изд-во Л. Д. Френкель, 1923-, 1923. — с. XXX] In its own indifference to the depth of the Frankfurt School of Marxism's treatment on history, the omission is a startling admission.

able to produce 200 more of whatever America produces for the same amount of money. This is not a mere difference in management and it cannot be attributed to "devolution" in American management, as Burnhamists may like to argue. This is a reflection of the stagnation resulting from a complete lack of accountability. Hence the suppression of labour and the FBI's decision to transform the systematization of a deprivation of the Bill of Rights[295] into the agency's central activity is its undoing; it is its undoing not only in terms of its illegal activity; it is its undoing not just for the Pentagon but for entire industries of the economy. The suppression of labour has thus undermined America's economy. North's concerted effort to collude with the FBI's decades long subversion of De Leon's trade unionism[296] is thus a reflection of the historical crisis of American socialism in the 21st century.

Niger () • On October 29th, 2026, the day Iran announced the launch of container freight on a route from Qom to China, just as Russia negotiated an agreement to revive Osagyefo Kwame Nkrumah's vision for energy independence in Ghana the CIA obliterated with its coup d'état on February 28, 1966, Algeria's military dispatched an Algerian army convoy to Niger, the first foreign troop deployment since Algeria sent forces to support Egypt during the 1973 Arab-Israeli war. Motivated primarily by energy but important, nonetheless, to European investors heavily invested in Algerian energy companies such as the Algerian state-run oil and gas firm Sonatrach, Algeria dispatched troops to Niger, Niger, which like other countries in West Africa's Sahel region, is battling insurgents liked to al-Qaeda and the Islamic State. Niger is not only one of the important markets in the Sahel-Sahara region but at the axis for the Trans-Saharan Gas Pipeline with Niger and Nigeria, which aims to deliver African gas to Europe and other international markets. Dispatched first of all to the uranium mining town in the country's northwest, Arlit, Algeria has refrained from disclosing the size of the force or the timetable for their arrival. When Bakhmut-Artemovsk fell on May 23rd, 2023, members of Niger's army established a military junta with a coup d'état against the democratically elected Mohamed Bazoum, relations with neighboring countries such as Algeria (the majority of whose weaponry is sourced from Russia), witnesses significant political fallout. In 2025, Niger recalled its ambassador from Algeria, after Mali accused Algeria of shooting down one of its drones near the border. Algeria's deployment of an army convoy to Arlit is thus a sign that relations between Algiers and Niamey have since improved.

North-South Corridor () • During the Ukraine war, the International North-South Transport Corridor (INSTC), one of the railways at the heart of the the world's richest millionaires, centi-millionaires, or billionaires fighting to assert supremacy over the global supply chain of great trade routes, expanded rapidly throughout Eurasia, enumerating brand new statistics for installed rails, shipments or the types of shipments. While the ultimate aim of the North-South Corridor aims, like most of all the Eurasian trade-routes, to establish a land route from Russia through Eurasia to India, one of the largest global markets in the history of the 21st century, the North-South Corridor's significance for its expansion into Russia's immediate or proximate neighbors gained importance in the face of the U.S.-led NATO project overthrow Russia's European trade routes on the European continent[297], a process whose development follows closely the key milestones in Russia's full-scale invasion of the Ukraine.[298] Russia initially expanded its railways to North Korea, a country whose shipments of war materiel have helped, some argue, an advantage in artillery over the Ukrainians. Russia continued, adding more countries. On September 12, 2023 Russia dispatched 36 wagons to Saudi Arabia through Iran's Icheh Borun border.

---

[295] The FBI's decision to exploit the instrumentalization of labour for the sake of asserting control over the economy illegally is a reflection of "parasitism." In his book, Imperialism as the Latest Stage of Capitalism (1917), Lenin demonstrated how monopolistic capitalism degenerates, "artificially retarding technical progress." America's inability to keep pace with China is a result of the FBI's decision to retard technical progress. In the words of the NVIDIA CEO, Jensen Huang "nine out of ten top science and technology schools in the world are now in China," the Chinese "lead in science and technology in many different fields," China has a "large population of highly qualified students," 50 per cent of the world's "AI researchers are Chinese," China published "70 per cent of last year's AI patents," where the "ecosystem of AI is vibrant, rich, incredibly innovative." The FBI's decision to retard artificially technical progress is one of the major contributing factor's to America's lack of competitiveness. The FBI would prefer to terrorize American academia than allow for American academia to flourish.

[296] Joe Kishore is a De Leon "national secretary" like De Leon's Arnold Petersen, a life time, career FBI agent whose life consisted in reprinting De Leon's works.

Considered to be the result of a joint partnership for sending cargo contains via the INSTC from the Formacheva railway station via Akyayla (Turkmenistan) to Incheh Borun, the route facilitates the path container trains take from the southern Ural railway stations to the port city of Bandar Abbas via Sarakhs or Incheh Borun. On October 2nd, 2023, a Russian train containing 31 wagons had traveled 1, 610 kilometers on Iran's railway in three and a half days to arrive at the Iranian port city, Bandar Abbas Central District of Bandar Abbas County, Hormozgan province, Iran for shipment from there to Saudi Arabia by sea.Russia's chosen route reduced customs tariffs to almost half the normal price, breathing new life into the Iranian rail transport industry through an increase in the share of transit goods the Islamic Republic of Iran's railways enjoys. The train travelled through both Kazakhstan and Turkmenistan before reaching Iran. It bypassed the alternative maritime route through the troubled Suez Canal that the dwindling naval power of the United States could no longer guarantee in the face of the Houthi's unrelenting attacks on container ships. On November 5th, 2025, Russia exported refined oil in the form of different types of fuels such as gasoline and diesel to Afghanistan via Iran. Russia's diesel fuel shipped from Russia to the Iranian Caspian seaport of Amirabad; from Amirabad to Mashhad; from Mashhad to Afghanistan on the semi-finished Khaf-Herat railway.[299]

---

[297] The Ukraine war accelerated European commerce on the continent. A 29 billion dollar megaproject to build the longest single rail tunnel in the world suddenly went underway, as the war roared on. The tunnel is designed to connect Lyon in France to Turin in Italy; the current route through the Alps is based on an 18th century design full of twists and turns; the tunnel is expected to optimize trade from truck to freight. Called the Mont Cenis Base Tunnel, it will exceed the Gotthard Base Tunnel in Switzerland by half a kilometer. Evidence that the Ukraine war is responsible for the project's acceleration is the document entitled, Commission Implementing Decision (EU) 2025/1715. Published on July 30th, 2025, the document required the " implementation of the Lyon-Turin cross-border project on the Mediterranean European Transport Corridor," mandating its completion.

[298] In an exceptionally telling post on how the Ukraine war has resulted in a redrawn energy map on Sky News Arabic, a subtitle describes how "the first shot in the Ukraine war killed the energy map." (i.e., الرصاصة الأولى في حرب أوكرانيا قلبت خريطة الطاقة إلى الأبد.) [SNABusiness: 1706965512322797576; September 27th, 2023] In this video, Sky News Arabic explains how the first bullet in the Ukraine war killed the pre-existing energy map in Europe, rerouting Russia's trade routes away from Europe to Eurasia. In turn, the U.S. routed its supply of energy to Europe. Algeria became a new supplier to Europe. ["Chevron Explores Algerian Gas Plans Amid Russian Sanctions," Wall Street Journal. February 6th, 2023], ["The Unexpected New Winners in the Global Energy War," Wall Street Journal. September 19th, 2023] In the initial aftermath of Russia's full-scale invasion, the West immediately imposed sanctions on the Russian imports for gas, coal, or oil, ending centuries of European reliance on cheap Russian energy. Slowly but surely the U.S. began to wean the countries less ideologically aligned to NATO off Russian energy. These are countries like Slovakia, Hungary, Romania, Bulgaria or Serbia. Later the U.S. successfully terminated Russian exports to Europe almost altogether, at least as far as the Ukraine as a transit hub is concerned. There can be no doubt that Russia's full-scale invasion served as an incredibly timely excuse to implement a plan, the likes of which Condalezza Rice espoused in an interview from 2014. In the interview, Rice the following: "Now we need to have tougher sanctions and I'm afraid at some point this is going to probably have to involve oil and gas. The Russian economy is vulnerable. 80 of Russian exports are an oil gas in minerals. People say well the Europeans will run out of energy. Well, the Russians will run out of cash before the Europeans run out of energy and I understand that it's uncomfortable to have an effect on business ties in this way but this is one of the few instruments that we have. Over the long run you simply want to change the structure of energy dependence; you want to depend more on the North American energy platform, the tremendous bounty of oil and gas that we're finding in North America; you want to have pipelines that don't go through Ukraine and Russia. For years we've tried to get the Europeans to be interested in different pipeline routes it's time to do that and so some of this is simply acting and acting as quickly as possible."

The INTSC connects the major economies on the Eurasia to Russia. Articulated in Russia's strategy for the country's fundamental supply chain,[300] the INTSC represents a major shift in the history of global trade in Eurasia.[301] A salient feature of previously oceanic routes becoming territorial is a Suez Canal[302] reduced in significance.

Nova () • Perhaps one of the longest running series in the history of television, if not broadcasting or streaming, Nova represents the state of the art of America's ability to reach the heights of consumable, popularized, visual, free, scientific media. The most-watched prime time science series with a weekly viewership exceeding five million, the Nova series, which spans from Sun, Mar 3, 1974 to the present with no fewer than 51 series contains one of the many cornucopias of data the developing systems responsible for the growth of AI require to produce novel innovation. The first Nova documentary broadcast less than ten years after the last episode in a series called The Bell System Science Series.

A predecessors to Nova such as The Bell System Science Series accomplished much to lay the groundwork for scientific exegesis. The Bell System Science Series consisted of nine television episodes lasting less than 30 minutes apiece made for the AT&T Corporation[303] broadcast from 1956 to 1964. The episodes read more like Socratic dialogues with the characters asking each other questions than a storyline with characters who undergo changes in the face of an adventure.

---

[299] The Khaf-Herat railroad is a 225 km standard-gauge (1, 435mm), non-electric rail line linking north-eastern Iran to western Afghanistan. Proposed in 1975 to transport iron ore from nearby mines in Afghanistan to Iran, the railway is one of the many projects the Taliban government revived after an ugly American withdrawal on August 30, 2021 during Biden's war administration.

[300] [”Новак: транспортный коридор "Север - Юг" станет основой для цепи поставок в России," *ТАСС*, 21 апреля, 2022 года.]

[301] Alongside the INSTC, which is a primarily Russian dominated trade, are the trade-routes on Eurasian railways leading to China. On May 25th, 2025, the first freight train from Xi'an, China, arrived at the Iranian port city, Aprin, a historic milestone for the development of Sino-Iranian relations. The historic land route reduces the time by sea from 30 to 40 days to 15 days by rail. The reduction of the journey by 15 to 25 days represents the immensely powerful transformation domination of a land route in Eurasia imparts to its ruling power. These statistics indicate that China theoretically doubled the amount of its transit goods. Alongside China, Saudi Arabia, one of the many centers of power in Eurasia, announced the issue of tenders for a 1,000-mile railway between the Red Sea and the Persian Gulf for linking Saudi Arabia's oil giant, Aramco, from Jeddah on the Red Sea through Riyadh to the country's east coast ports in a move designed to bypass the Suez Canal altogether. Shortly before the fourth anniversary of the Ukraine war, Riyadh began to construct its land-bridge, signifying how by coincidence or causality the Ukraine war became witness to changes in Eurasia's trade routes that are expected to influence mankind for centuries.[”Saudi Arabia to Seek Bidders for 1,000-Mile Red Sea-Gulf Railway,” Bloomberg, September 18th, 2017] It is hard to imagine how quickly history began to move in the face of the Ukraine war but even countries with a much lower profile than Saudi Arabia such as the United Arab Emirates, whose significance is addressed in a separate entry, traversed a new land route for its trade. [Red Sea Attacks Force Firms to Test New Land Routes via UAE, Saudi, Bloomberg,February 2nd, 2024]

[302] The Suez Canal underwent a fundamental transformation during the Ukraine war. Prior to the Ukraine war, the Suez Canal dominated shipping lanes for Eurasian countries transporting goods to or from the Mediterranean to the Persian Gulf. During the Ukraine war, major shipping companies such as Hapag-Lloyd began to call for the utilization of territorial routes such as Saudi Arabia's land-bridge, as many major German newspapers, newsreels, or broadcasters announced. [”Hapag-Lloyd bietet durch Saudi-Arabien an,” Der Spiegel, January 22nd, 2024]

The first four are called Capra films after their producer, Frank Capra.[304] Capra released Our Mr. Sun in (1956), Hemo the Magnificient in (1957), The Strange Case of the Cosmic Rays in (1957),[305] and The Unchained Goddess in (1958). Capra later described the films: ”Those four films about science, hand woven with bits of celluloid, were sprightly patterns of poesy and fact; fresh ideas were their main charm, a rather elegant charm, we thought, much like the light-hearted but disciplined charm of a Mozart composition.[306]

Warner Brothers took over production of the next four after firing Capra for his emphasis on a pedantic agenda designed to portray science as the ”Holy Spirit.”[307] Warner Brothers produced the next four in the series. These are Gateways to the Mind in (1958), The Alphabet Conspiracy, in (1959), Thread of Life in (1960), About Time in (1962), the last of which is undeniably a classic of unparalleled quality. There is perhaps no competing work capable of the depth of explanation the film achieves. Disney produced the last video, The Restless Sea, in (1964). These experiments, whose producers, screenwriters, or production changed almost per episode, laid the groundwork for future educational documentaries in the sciences in America.

Novoselivka () • On September 4th, 2025, the Ukraine failed to defend the village called Novoselivka. On that day the Russians entered not only the village but the region of Dnipropetrovsk, beginning Russia’s advance on the so-called Great Bend at the river, Dnipro.[308]

Nigera () • Shortly after the fall of Bakhmut-Artemovsk (See above), Nigeria became a focal point in the global context of the Ukraine war. Described as 'horizontal escalation', the head of Nigeria's government, which previously maintained a contract for stationing a U.S. base in the country, reneged, becoming one of the first countries to rebel against the rule's based order in Africa the United States could no longer guarantee with its presence alone. Subsequently, Nigeria joined neighboring states to form an alliance in the Sahel region. Primarily designed to be for UAV reconnaissance, the U.S. air base accomplished little to nothing in the way of disrupting, eliminating or reducing terrorism in the area. The new government forced the U.S. to close the base before an embarrassing withdrawal. Months later, President Donald Trump issued a stark warning to Nigeria, threatening the country with invasion.

---

[303] In the 20th century, companies like AT&T, which were akin then to that of the Magnificent Seven now, funded major projects for America’s cultural, scientific, intellectual development. The new corporate culture at companies from the Magnificent Seven has completely abandoned the American corporation’s civic duty. None of the Magnificent Seven’s companies have produced anything resembling the scope, importance, or power of the The Bell System Science Series. The Magnificent Seven have contributed almost nothing to American culture. The vast majority of the activities of the Magnificent Seven have contributed nothing but to the expansion of America’s police state bureaucracy with the creation of backdoors for America’s police state agencies, departments, commission, offices, bureaus, or departments to utilize without a warrant in a massive expansion of the Federal government’s ability to eavesdrop on their everyday activities like bathroom breaks or purchasing tampons. Is the Federal government now so weak that eavesdropping on bathroom breaks or tampon purchases is absolutely necessary for the maintenance of its power?

[304] Prior to his production of The Bell System Science Series, Capra produced seven episodes in a series on World War II under the eye of the War Department. These are Prelude to War (1942), The Nazis Strike (1943), Divide and Conquer (1943), The Battle of Britain (1943), The Battle of Russia (1943), The Battle of China (1944), War Comes to America (1945). Produced alongside the war, these films represented a considerable achievement in the visual arts. The 20th century is full of wars but few have ever received as much coverage as Capra’s series.

[305] One of the most curious aspects of the Capra films is the roundtable of puppets representing Fyodor Dostoevsky, Edgar Allen Poe and Charles Dickens, who apparently hosted a contest about the great mystery of matter and the universe. It is unclear why Capra selected these authors over all others, as few, if any, books they wrote ever deal directly with the question of matter or the universe.

[306] Capra, Frank (1997). The name above the title: an autobiography. DaCapo Press. p. 443.

[307] The ”Holy Spirit” is so elusive that Muslims claim Jesus prophesied Mohammed’s coming in John 16:7-14 where the word interpreted to ”Holy Spirit” is semantically unjustifiable within the context of the Ancient Greek koine. In Surah As-Saf Ayat 6 in the Holy Quran, the passage discusses the one from John.

[308] [“Российские войска освободили Новоселовку в Днепропетровской области,” *Регнум*. 4 сентября, 2025]

Nigeria became only the first country in Africa to become the focal point in rapidly evolving struggle for spheres of influence among the great powers in Africa.

O

The Oak and the Acorn () • In his famous foreword to the The Phenomenoloy of Spirit, Hegel employs the analogy to explain how a consciousness subsumes superseded truth.

Dr. Octagonecologyst () • Released on May 7th, 1996, Kool Keith's album Dr. Octagonecologyst celebrated its 30th anniversary during the fourth anniversary of the Ukraine war. May 7, 1996 to May 7, 2026 is the 30th Anniversary of one of the greatest feats in the history of music, Dr. Octagon. With unbelievably lyrical hits like "Blue Flowers," "Half Shark Half Alligator," or "Earth People," no American rapper has come close to what Kool Keith rapped. Alongside a litany of rappers, whose lyrics rise far above the mercantilism, bling, or hedonistic materialism, a steady stream of lyricists arose during the 1990s to sing into scratched vinyl a distinctly technical experimental exploration of language. Kool Keith is one of the leaders. In contrast with contemporary rappers, whose songs are covers for earlier American songs, lyricists like Kool Keith produced original, groundbreaking, mind blowing music.[309]

October 17th () • The global eruption of the class struggle in response to rising yields on government debt in the form of bonds in the major G7 countries marked coalesced with prior political processes on October 17th, 2026 when France witnessed the single greatest night of protest in the country's history. Shortly after the protests, which spread from one end of Europe to the other in such countries as Portugal, Albania, Greece, Italy, Belgium, Germany, or Denmark, the yield on France's 10 year bond rose to 5.01 per cent, the highest level on record for France's history of debt. The protests witnessed urban combat cause the French gendarmerie to retreat under a volley of stone.

Oil () • The highest expression of sanctions against Russia's oil industry became the sanctions on Russia's Rosneft and Lukoil companies.[310]

Let there be no doubt about sanctions. Sanctions have nothing to do with Russia's economy. They have been focused primarily on securing the transformation of Europe's trade routes away from Russia to the U.S. Secondarily, sanctions ranked the geopolitical order for China, India, Russia and U.S. The application of sanctions occurred in a stepwise fashion. At first the U.S. secured "strategic input substitution" on Turkey's crude with Brazil; the second step-wise application is to secure Venezuela's crude for SIS in India. Kolbeissi, for instance, claim this is the next step. This makes Russia sequentially less powerful than China or India, subordinating Russia's great power to the former. The U.S. imposed sanctions based on a calculated risk. While sanctions would certainly hasten the speed with which BRICS countries abandoned the dollar for a BRICS currency, the U.S. gambled that the transformation would succeed ahead of or in spite of the abandonment. The gambled paid off. While sanctions have accomplished the transformation, the transformation, however, has not produced results for the U.S. It has not, for instance, solved any of the problems related to the trade deficit, the Federal debt or the dollar. The startling revelation that the revenues from oil have not had an impact on any aspect of the U.S. economy is clear from the data on the subject. China's capacity for oil refinement exceeds the U.S.'s. The price of oil is slipping to new lows. Whether or not sanctions continue to secure the rank in the geopolitical order for the U.S. is dependent upon the death of the collapsed dollar; the collapsed dollar, which no longer enjoys the Petrodollar, lacks the legitimacy it once enjoyed. While major commodities contracts have continued to utilize the currency, the rise in competiting currencies has displaced the dollar significantly. The ability to leverage sanctions through the SWIFT system will die with the death of the collapsed dollar. It is unlikely that the sanctions on Russia will secure the ranking, let alone the transformed European trade routes for the simple reason that the death of the collapsed dollar has already entered an extremely advanced state.

---

[309] Released on October 27th, 1998, Jay-Z's "Hard Knock Life (Ghetto Anthem)," for instance, is a single whose origins are neither original nor creative. Although described as a vocal and pitch-modified instrumental sample, song is nothing but a cover for "It's the Hard Knock Life" from the 1977 musical Annie.

[310] Moskau reagiert auf Trumps Sanktionen gegen die Ölkonzerne Rosneft und Lukoil mit martialischen Durchhalteparolen – und mit Umgehungsstrategien. China und Indien zögern noch.[" Trumps neue Sanktionen: Russlands Ölindustrie unter Druck," Frankfurter Allgemeine, October 23rd, 2025]

Optimus () • Elon Musk's proposal for prisoners to be released in exchange for these prisoners to be subject to the surveillance of a robot called "Optimus" is a radical departure from the various means of punishment contemporary America's system of 'justice' has yet to embrace. The problem with Musk's proposal is what is wrong with contemporary America's own system of 'justice' now. America's system of 'justice' suffers from two problems; the system does not concentrate on an elimination of the root cause of crime but on its effects; the second is that the system is so corrupted that to speak of it as a system of 'justice' is as flawed as trying to speak of justice itself in the United States.

An "Optimus" would be less humane, since the aim of justice is to eliminate crime. If "Optimus" cannot but correct the predictable behavior of an individual person, who is already 'convicted' of a crime, "Optimus" is more of a prophylactic than a cure.[311]

Musk makes the claim that Optimus' brain is a real human brain. It is hard to believe this statement. A human brain is formed through the process of live conception from insemination to death. Unless Musk has a way to form an Optimus' brain through live conception from insemination to death, then Optimus' brain most certainly will not be a real human brain. It is important to emphasize just far removed from experience Artificial Intelligence truly is. The difference is even stronger in terms of time. A key feature of the real human brain is the ability to follow points in a conversation over time. AI, for instance, cannot track a conversation over time in the same way that a human being can track a conversation; AI, in fact, does not track a conversation over time at all; AI has absolutely no sense of time whatsoever. An AI agent, be it any of the major products deployed on the Internet right, cannot relate a point from an earlier period of time in a conversation to a later one, reason about the difference of those two points, or produce a synchronous response to those two points at a third point in time. The idea of a synchronous conversation where a later point evolves from earlier or an earlier point at a third time is not a function that AI has. Without the synchronicity of conversation, AI agents thus lack a key feature of the real human brain. These disparities make the idea of a real human brain for Optimus hard to understand.

[311] ["Elon Musk Says Tesla Robots Can Prevent Future Crime," Newsweek. November 11th, 2025]

operetta () • Performed over half a century ago, El-Leila El-Kebira (The Grand Night), an iconic puppet show that represents Egypt's puppet art at international festivals from 1971, celebrated its 50th anniversary just a year before the beginning of the Ukraine war. The Egyptian poet Salah Jahin Egyptian wrote the puppet-operetta with a score Sayed Mekawy composed. Approximately 40-minutes in length, the operetta opened celebrations for Mawlid[312], the annual festival commemorating the birthday of the Islamic prophet Muhammad on the traditional date of 12 or 17 Rabi' al-Awwal, the third month of the Islamic calendar. The operetta exalts with joy over a fortune teller, hummus, circus performers (such as jugglers, clowns and lion tamers), the famous Egyptian bellydancers with twirling hips, catchy Egyptian folk songs and rhythms. The play has become one of the most important acts of theatre in the 1960s and in Egypt, and arguably across the Arab world, especially on account of its cultural relevance, nostalgia and reminiscence for golden age of Egypt's music.

Oppenheimer () • One of the worst film productions in the history of Hollywood, if not film altogether, Oppenheimer (2023) attempts to portray the construction of the atom bomb with felicity. While the film itself is so insignificant as to be completely forgettable, an important scene portrays Kurt Gödel[313] at Princeton walking with Einstein in the gardens. The scene is important for humanity. Gödel became the greatest logician in the history of mankind with the publication of incompleteness theorem. Gödel's work became significant during the third anniversary of the Ukraine war shortly after Elon Musk's ChatGPT erupted in a revolution for technology. In the latter half of the year, many experts began to espouse views related to complete systems. In many of the analogies these experts have invoked, most claim mathematics is to AI. In one analogy, for instance, Hinton compared mathematics to chess. Since computers play chess well, he reasoned that AI could play mathematics well, as though mathematics is a complete system like the game of chess.[314] Gödel's incompleteness theorem[315] thus became relevant for easily dispelling myths about AI like Hinton's.

---

[312] A deputy of the great Saladin (r. 1174–1193), the Muslim general Gökböri, is allegedly tthe first to publicly celebrate Mawlid in an impressive ceremony at the Prophet's Mosque in Medina.

[313] David Malone is incorrect to claim, as he does in his 2008 BBC documentary called Dangerous Knowledge that Kurt Gödel's decision to pursue mathematics led inevitably to his madness or ultimate suicide, since Gödel developed his incompleteness theory well before his 30s.

[314] To make matters worse for Hinton, Hofstadter (1979) in Gödel, Escher, Bach: an Eternal Golden Braid extends Gödel's incompleteness theorem to any Turing-complete computational system, obliterating Hinton's hypothesis as dead on arrival.

[315] Aristotle never had a problem with unprovable first principles in geometry, logic, or elsewhere. In his Prior Analytics, Aristotle treats the principle of non-contradiction as a source of apodeitic knowledge. The principle of non-contradiction requires no feature to be both true and untrue in the same way at the same time. It is self-evident. If it were not self-evident, then any opposition must fall silent, for the act of negation requires the opponent to assume the truthfulness of the

Orchestration () • Orchestration is an American technique of propaganda for the subversion of struggles into dramas whose political polarization is desnigend to sway American public opinion in a specific direction. While, on the one hand, the events orchestration coordinates to happen are really happening, the fact that they happen or are happening, on the other hand, excuses none of the coordination responsible for this or that happenstance. The outcome is usually the only way to tell whether an event is the result of orchestration or the result of individual actors actually involved in a controversy whose outcome is not orchestrated by coordination.

There are numerous categories of orchestration now, as the practice of orchestration has expanded immensely since the collapse of the Union of Soviet Socialists Republics on December 26th, 1991.[316] In terms of Article III, the part of the U.S. Constitution responsible for the establishment of Courts, the practice has only recently resulted in the proliferation of an overwhelming number of Court cases, the vast majority of which amount to nothing more than a singularly prodigal waste of America's money, since the outcome is usually designed to appear as impasse but can terminate in a final determination on the merits.

The most recent case of orchestration is one of the most obvious for anyone familiar with the Department of Justice in the United States of America. On or before August 10th, 2025, one or more members of the Department of Justice instructed Sean Charles Dunn, a fellow employee at the DoJ, to purchase a sandwich at Subway[317] for a media spectacle. Dunn approached U.S. Customs and Border Protection agents gathered at a spot about which one or more of the members of the DoJ told Dunn they would be, waiting for him. These members of the DoJ informed the U.S. Customs and Border Protection agents that a member of the DoJ named Dunn would be approaching them with a sandwich. Dunn issued a few remarks before suddenly throwing the sandwich at the U.S. Customs and Border Protection agents. Pam Bondi, the Attorney General, filed false charges to a Grand Jury or preselected members of the public with specific instructions for these members to deny the impending charges. Bondi claimed on social media: "If you touch any law enforcement offi-

---

principle. Hence there is no way to accept the principle except apodeitically. Apodeitic knowledge, however, is anathema to the AI proponents of a world designed to function according to the defunct Mathematica Principia.

[316] The fall of the U.S.S.R. represented the fall of the object of external opposition. Infiltrated by the massively ever widened police State bureaucracy in America, political parties in the U.S. could no longer pose a threat to the existing political order for lack of external opposition. The reason for which the massively ever widened police State bureaucracy justified infiltration consequently evaporated. If the object of infiltration was to prevent the object of external opposition from exerting control, influencing or playing a role in America's own internal politics, the fall of the U.S.S.R., ipso facto, eliminated that justification, eliminating the primary motivation of the massively ever widened police State bureaucracy's infiltration. The response became a shift from external opposition to any or all internal opposition to the ruling elite's decision making for society. Whereas American communists were the perceived threat in the face of the U.S.S.R., any or all dissenting Americans suddenly became the new threat for which agents of the unjustified police State bureaucracy grasped to justify the gravy train.

[317] It is characteristic of America's ruling elite that the orchestration involved a sandwich from Subway. It is probably to exploit the case for marketing. Subway is an underperforming asset for American food.

[318] Bondi's remarks regarding law enforcement are instructive. Bondi's statement indicates that the Department of Justice has no problem orchestrating Court cases for the sake of dispatching messages in a vile repudiation of Article III, defiling the U.S. Constitution, the instrument for which Bondi has been charged with implementing for executing Thomas Jefferson's injunction against the English crown from July 4th, 1776. No citizen should ever tolerate the defilement of

cer, we will come after you,"[318] Bondi posted online Thursday. "Not only is he FIRED, he has been charged with a felony." In the sequentially staged aspects of Dunn's case, the pre-selected members of the grand jury returned a rejection for Bondi's first request for a felony. Later they returned a rejection for a misdemeanor. The newspapers, the majority of which no longer register validity, legitimacy, or veracity for the few members of the reading public still subscribed, published article after article, detailing Dunn's case; designed to appeal to the citizens who have identified Trump's deployment of U.S. Custom and Border Protection's behavior as unacceptable, Dunn's role in the orchestration provides false hope of successful resistance. The message is that citizens can resist. They are more than welcome to throw Subway sandwiches at members of U.S. Customs and Border Protection agents. A grand jury will return a rejection for a felony. It serves as a sense of relief when these citizens unconsciously read how Dunn managed to escape the charges. Little do the citizens know that both the felony as well as the misdemeanor charges were deliberately staged acts of malicious prosecution Dunn knew he would escape when he first spoke to his coworkers to orchestrate the media spectacle. It is mark of arrogance and irony that Bondi describes the incident as "an example of the Deep State we have been up against for seven months."[319]

Orient () • The Orient[320] came into focus during the Ukraine war for the horizontal escalation the warring great powers initiated to resolve the conflict tangentially.

Outbreak (1995) () • Outbreak (1995) details a Federal government conspiracy to weaponize an outbreak of a so-called Motaba virus. The film follow two high ranking members of America's military industrial complex. In the beginning of the film, the two generals plan the destruction of an entire village in Zaire, even though the two had in their possession an antibody to cure the virus. Later these two generals, who confront an airborne version of the original Mutaba virus, decided to subject the California town of Cedar Creek, which the military has quarantined the local population, to the Zaire treatment for the virus. The film demonstrates how America's military industrial complex cultivates the viruses for weaponization in biological warfare where "national security" rises above the legitimate health concerns of the population.

---

the Department of Justice for orchestration under any circumstance, for the U.S. is nothing but the executor of the Declaration of Independence. Should the members of the Federal government choose to be instruments of private central bankers, they invoke Jefferson's recommendation automatically. Jefferson says, "That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it." Under the doctrine of popular sovereignty, where the Courts are complicit in orchestration, the idea that nothing more than proposing a bill to members of the House of Representatives or the Senate for an Amendment to the U.S. Constitution to prohibit orchestration is as futile as the history of acceptance for the 16th Amendment, if not the history of ratification for the 28th Amendment.

[319] The Deep State is the Federal government. The fact that Dunn was a DoJ agent is a dead giveaway. No one believes the Federal government anymore. It has long since exhausted the law of diminishing returns with its exploitation of suspended disbelief.

[320] A foundational text on the Orient from the Soviet Union is Ближный Восток by М. Рафаил (i.e., . 1926) where the author openly quotes Leon Trotsky, writing: "Восточный Вопрос страшной язвой горит на теле капиталистической Европы. (Л. Троцкий и Х. Раковский - "Очерки политической Румынии.") (с. 1). Trotsky, who leaked the Sykes-Picot agreement to the press, is responsible for the editorial line the journals, periodicals, or news took following his exposition of the agreement, demonstrating how his contribution to the exposition of secret Czarist treaties contributed in more ways than one to the expansion of Russian political thought on the the Middle East, near East, the East, Asia Minor and Eurasia. One of the resulting currents of thought in Russia's raging 20s, a period of intense intellectual development in the sciences and the arts resulting from the October revoultion and the educated revolutionary masses participating in the construction of the first worker state, Trotsky's inspiration for developments in oriental studies cannot be underestimated. М. Рафаил's book is but one of the many examples.

P

Paine, Thomas () • Thomas Paine’s radical pamphlet, Common Sense, marked its 250th anniversary on January 10, 1776, shortly before the fourth anniversary of the Ukraine war.

Palantir () • A centralized intelligence agency deployed to the Ukraine war, Palantir has exploited the Ukraine for experiments with Artificial Intelligence since the beginning of the war, if not earlier. In an article published by Time magazine shortly after the fall of Avdiivka on January 17th, 2024 under the title, ” How Tech Giants Turned Ukraine Into an AI War Lab,” Mykhailo Fedorov, Ukraine’s Minister of Digital Transformation, claims his “big mission is to make Ukraine the world’s tech R&D lab.” In the article, Jacob Helberg, a national-security expert who serves as an outside-policy adviser to Palantir’s CEO, Alex Karp, calls Palantir ”the AI arms dealer of the 21st century.” (February 4th, 2024)

In an interview with Tom Mackenzie on November 14th, 2025, Palantir’s UK head, Louis Mosley, described how the Ukraine is a ” research and development lab for AI” in the battlefield. Palantir cites ” extraordinary acceleration” in military technology. Mosley likened the speed with which Ukraine is required to reach the bleeding edge of technology for military innovation to that of the Allies during World War II when Germany’s strategic bombing on the United Kingdom brought about some fundamental discovery in radar.[321]

Digital Transformation is a term developed before OpenAI’s first release of ChatGPT. OpenAI’s first release of ChatGPT transformed the algorithmic revolution[322] into the AI revolution. Designed primarily for sales at technology companies, the term is a pitch for likening the failure to embrace the algorithmic revolution to Kodiak’s refusal to digitize for photos. Kodiak’s refusal to digitize its photos ultimately led to its extermination. It is term deeply involved in the theory of social Darwinism where the strongest companies adopt the latest, greatest, strongest differentiation for thriving against competitors.[323]

---

[321] Although it is unclear what is meant exactly by raids across the English Channel, an educated guess may be the Nazis’ Vergeltungswaffen. In Weapons of Weapons of Mass Destruction Robert Hutchinson details how the Allies utilized SCR-548 ”gun laying radar to automatically track and predict the V-1 flight paths.” (2003; pg. 44) It is unclear what advances the Allies made or at what speed these advances were made. In World War II the major innovations in radar with the SCR-548 proceeded primarily from Allied ’strategic bombing.’ An air enthusiast, for instance, claims General Quesada developed the SCR 584 radar system. Beneath a picture of Adolf Hitler behind Stuka dive bombers, the cover of Airpower from Winter 1989, he writes: “In contrast, General Quesada innovated. He used the microwave early warning (MEW) radar and the SCR-584 anti-aircraft radar in several new and unplanned ways, building an entire command and control network centered around this new technology. He put radio intercept operations (Y-Service) with MEW and radio controllers to help win the air battle. To assist ground-attack missions, MEW operators coordinated with SCR-584 operators to provide navigation and precise control to fighter bombers. The wide-band MEW was used for long-range and area control, while the SCR-584, with its narrow beam, was used for close-range, precision work.” (Carter, 1989; pg. 26) During which of the Nazis’ ’strategic bombing’ did the English develop the SCR-584 radar system? Or did General Quesada develop the system for the Allies’ own ’strategic bombing’?

[322] Ram Charan’s Attacker’s Advantage, written before the OpenAI’s first release of ChatGPT, details the algorithmic revolution. The attacker’s advantage refers to the fact that an entity (like a business or individual) who is the first to act gains a strategic advantage over competitors. The ability to identify and exploit opportunities before others do, particularly in a rapidly changing environment, distinguishes an attacker from the attacked. (February 24, 2015)

[323] The theory of social Darwinism for the Ukraine, however, is slippery slop. The Ukraine specially inferior to Russia in several important respects. Is that the right ethical or moral framework for understanding Ukraine’s struggle against Russia or Russia’s against Ukraine? The above mentioned article from Time magazine, on the contrary, likens Ukraine’s situation not to the evolution of species but the battle David fought against Goliath in the Old Testament. Which

The rise of Karp is a response to the aftermath Edward Snowden's decision to leak to the American and internal press evidence of the Federal government's conspiracy to deprive citizens of the right to be free from unwarranted searches and seizures under the Fourth Amendment. In contrast to technology leaders like Tom Siebel, whose book on digital transformation dedicates no more than a few paragraphs to social darwinism with the remainder laser focused on the technology of his product at C3.ai, Karp's book is a politically motivated invocation for the Silicon Valley, the 8th Wonder of the World, to shift away from innovation for improving the state of the art in technology, the individual or society at large, to the promotion of a type of nationalism commensurate with the aims of imperialism. Karp's book, The Technological Republic, advocates for technology companies to focus on solving problems related to the struggle of a nation-state to assert dominance on the global scene.

Karp's book is based largely on an analogy. It compares the existing situation in the United States to that shortly before WWII, advocating for a resumption of the war years under Roosevelt. The problem with Karp's analogy is that the United States has underwent tremendous change. The ratio of debt to GDP during WWII for America's war machine during WWII represented a percentage far more manageable than the current. The current ratio of debt to GDP is 125 percent. During the WWII years the ratio was Whereas in the period before WWII, the Federal debt represented no more than a fraction of GDP year over year, the Federal debt consistently exceeds GDP now.[324] The technology before WWII is unlike technology now. AI, whose scope extends past digitization, algorithms, or automation, is a type of technology like no previous technology in the history of mankind. In contrast with previous types of technology (i.e., digitization, algorithms, or automation), AI is almost sui-generis.The attempt to compare AI to consciousness is one of the most flawed analogies in the history of philosophy, since AI has absolutely nothing comparable to what might be called experience for human beings, the unity of cognition from birth to death in the form of memories. AI, for instance, is not borne; it does not die. It has no unity of experience. It has the ability to create parts of itself on its own. No such technology existed during the war years. The fourth problem with Karp's analogy is quality of life. The idea that America's economy made Americans better off than before the war years is false. Higgs[325] provides ample evidence that they were not. Most Americans, who labored during WWII, experienced what might better be called a sacrifice. Normal consumption dropped. Americans worked longer and harder. A significant number of Americans gave up life and limb

---

ethical or moral framework best describes Ukraine's or Russia's situation? Does the matter relate not to Darwin nor David but an altogether different struggle? Isn't David's pebble a much better analogy for a discussion about weapons? It is an example of a technologically advanced weapon for defeating a much larger, more powerful, more advanced enemy.

[324] The attempt to revive 'the Arsenal of Democracy,' whose rise alone during the Ukraine war consumes innumerable reams of paper, recently became the subject of a new book published by the Center for Strategic and International Studies. In his book, The American Edge, Seth Jones argues for a resumption of the 'Arsenal of Democracy' in America. He bases his call for America's transformation on the same analogy as Karp's: American's 'Arsenal of Democracy' from the administration under Franklin Delano Roosevelt.

[325] [Higgs, R (1992), "Wartime prosperity? A reassessment of the US economy in the 1940s", Journal of Economic History 52: 41–60.], [Higgs, R (1999), "From central planning to market, the American transition, 1945–1947", Journal of Economic History 59: 600–23.], [Higgs, R (2006), Depression, war, and Cold War: Studies in political economy, New York: Oxford University Press.]

to join the French and British fight Germany, Italy and Japan for parts of their defeated empires to be incorporated into America's. A fifth argument is that the establishment of the 'Arsenal of Democracy' is rooted in a legitimate concern over the implications Adolf Hitler's Nazi party had for the Enlightenment; since there is no comparable leader, party or regime, the modern call for an 'Arsenal of Democracy' lacks the political justification its past enjoyed. Karp's analogy for a 'technological Republic' is a ploy to convince young Americans to shift away from self-improvement, societal good or technological advancement towards the pursuit of American nationalism, the aims of imperialism, or the establishment of the United States of America as the leading, undisputed, global superpower.

Karp is one of the least convincing of all the founders installed in America's technology companies. He is really bizarre. His arguments are more a "pauper's brew of eclecticism" than the reflection of an intellectual dedicated to groundbreaking research. You do not hear major figures like Bezos, Gates, or Musk making stupid comments about national security. It is unclear why America's bourgeoisie has so much faith in Karp to keep appearances. Karp's argument about American police state surveillance, for instance, being superior to a state of inferiority with relation to China in terms of the global race for AI is a really more of a reflection of his exceptional ignorance of technology than national security.[326] In the history of technology, there is no precedent for the idea of a perpetually guarded invention. The atom bomb, for instance, is a perfect example here. In no less than four years after the United States dropped an atom bomb on Japan did the Union of Soviet Socialist Republics manage to build its own.[327] It cannot be that Karp actually believes achieving a four year advantage (give or take) is a sufficient basis to justify the Federal government imposing a systematic deprivation of the Fourth Amendment right to be free from unwarranted searches or seizures on the entirety of the United States, especially for Palantir. Palantir is nothing compared to the Bill of Rights. Had there never been a Bill of Rights in the first place, no tech company could have ever enjoyed the freedom Palantir has. Palantir's (theoretical, hypothetical, or conjectural) attainment of a four year advantage in the race for AI is not calculated to benefit American citizens but Palantir. Neither Karp nor Palantir have ever articulated how the attainment of an advantage in the race for AI over China may benefit Americans. The relative benefit a four year advantage in the race for AI (whose value cannot be assessed but to be below that of the power a nuclear bomb provides a state) relates least of all to a prospective justification for an acceptable relinquishment of a right in the Bill of Rights. No citizen believes the value to exceed that of his or her right to , life, liberty or the pursuit of happiness or to be free (from unwarranted searches or seizures).

Karp's argument thus attempts to persuade Americans by way of fear that the concomitant loss of a right from the Bill of Rights is far safer than the ensuing lack of security China's attainment of an advantage in the race for AI might pose. His argument, however, is not only a work of poor intellectual craftsmanship but easily one of the least enthymematic of the scaremongering so commonly expressed in the mouths of post-9/11 American politicians. The mantra so frequently evoked in the endless stream of now unbelievably mistrusted American mainstream news on post-9/11

---

[326] ["Palantir CEO Says a Surveillance State Is Preferable to China Winning the AI Race," Gizmodo, November 7th, 2025]

[327] Hutchinson details how the Union of Soviet Socialist Republics managed to build its own atomic bomb in his book, Weapons of Mass Destruction).

American politicians is to trade freedom for safety. Educated in the words of Thomas Jefferson, no American would ever trade his or her freedom for safety. America's decision to sacrifice safety for freedom in the American Revolution is epitomized in Thomas Jefferson's Declaration of Independence. Karp's argument is really about selling safety for lively profit from freedom's death. It is an anti-American subversion of one of America's founding principles.

One of the other claims Karp raises is that an America's power relative to competitors determines the scope, number, or exercisability of an American's rights. He says, ”You will have far fewer rights if America is not in the lead.”[328] Karp's claim is hard to understand. Does Karp mean to suggest that Article III courts are less willing to provide American's their rights through judicial activism when the United States operates on the global scene without the dominant, leading, world historical decision making capacity a superpower enjoys? Is it so when the U.S. becomes only a competiting great power? Does Karp mean to suggest that as America's power relative to its ability to wield the bleeding edge on the technology of AI weakens so do an American's rights; if so, how? How is it that a change in America's power relates to that of an American's rights? Where does the ratio come from? On what is the ratio or proportion based? Does Karp mean that the Legislature rather than Article III courts will pass legislation reducing an American's rights, if and only if, the United States fails to assert power commensurate with what is needed to guarantee that removed right? How is it that Karp can claim that an American's rights depends upon America's power relative to competitors? How does that ratio or proportion work in a constitutional Republic like the United States of America? Is it possible to reduce Karp's ambiguous claim to a smokescreen? Is it Karp's intention to scaremonger Americans into the belief that access to, enjoyment of, or control over rights depends upon how often, how many, or to what extent he or she is ready to sacrifice a right for the United States to gain an advantage in AI and, if an American is able to secure access to, enjoyment of, or control over rights only when he or she sacrifices a right, which right is unknown, how is it that by sacrificing what is to be gained, an American's relations to his or her rights is thereby improved. Isn't that ex hypothesi? How can an American's relation to his or her rights be improved by their sacrifice. Is that sacrifice limited, unlimited, temporary, permanent, complete, incomplete, total, or partial? It seems that analysis of Karp's claims leads inevitably to ambiguity, lack of clarity or obscurity. It is not that Karp is speaking about ”Ukraine, ICE, Israel and generally telling the truth.” It is that Karp's statements are incapable of being understood in any real sense of the word definition,[329] claim, proposition, or inference.

Palladius () • Born into the family of an Orthodox priest on September 29th, 1817, Palladius studied in Kazan, Tatarstan. Palladius studied with Hyacinth (See Hyacinth). Palladius translated from Chinese the Secret History of the Mongols.[330] Palladius became one of the most specialized sinological Orientalist in Russian history at the time of his death on December 18th, 1878.

---

[328] ”U.S. must ”absorb a lot of risk” in AI race, says Palantir's Karp,” Axios. November, 25th, 2025.

[329] In his famous essay under the title, ”An Essay Concerning Human Understanding,” John Locke, one of the primary pillars upon which modern society builds the structure of an Enlightened society, says there are many types of words whose meaning does not meet the criteria by which a term defiendum corresponds to a defiens. Hume writes: ”Languages are not always so made, according tot he Rules of Logick, that every term can have its signification exactly and clearly expressed by two terms.” (III. iv. 7). Some words cannot be defined by other, ”[for] if the Terms of one Definition, were still to be defined by another, Where at last should we stop?” (III. iv. 5). Karp's claim, however, is not one of these indefinable types, since many different definable types are already so enunciated. The problem is that his claim is ambiguous beyond terminology.

gargantuan Pantagruelism () •

In The U.S. Dollar : An Advance Obituary, Pick's table of dates for auctions on the sale of US gold (pg. 66) represents the policy the US has pursued, since Woodrow Wilson founded the US Federal Reserve on December 23rd, 1913. There Pick details US Treasury auction sales for the precious metal from May 23rd, 1978 to November 1st, 1979. Pick accords his analysis on the nominal price of gold with an analysis of America's "gold stocks." The United States witnessed a fall in gold stocks over the course of nine decades. In 1940 the US held 19,551 metric tonnes. In 1949, the US held 21, 861 metric tonnes. In 1970, the US held 9, 864 metric tonnes. In 1971, 8, 349 metric tonnes. 1971 represents a major turning point for the US. In 1972, the US held 8, 594 metric tonnes. In 1973, the US held 8,619 metric tonnes. In 1974, the US held 8, 546 metric tonnes. In 1975 the US held 8, 546. In 1980, the US held 8, 222. In 1985, the US held 8, 170 metric tonnes. The "semblance of debasement" for gold therefore accompanies a drop in gold stocks. The drop from 21, 861 metric tonnes to 8, 170 metric tonnes, a difference of 13, 691 metric tonnes or 62.6 per cent in 36 years, represented the fastest decline in the largest gold stock in the history of mankind. In the 55th anniversary of Nixon's decision to terminate the gold standard on August 15th, 1971, only a profoundly unconscious, extremely absent-minded, effectively panglossian naïveté permits the claim that Nixon's decision to close the gold window arose from a hard choice. Shortly after he "closed" the gold window, the incoming administration in the US auctioned thousands of ounces of gold, epitomizing the gargantuan Pantagruelism, an absolute disdain for the fortuity of its sale, that continues to define the American body politic.

Parenti, Michael () • Although far from a rallying call for the International, Parenti's lectures are an insightful source of thoughtful opinion about Marxism. After police State bureaucrats orchestrated his removal from a university in the United States, Parenti lectured widely well beyond the 17 books he published on topics related to Karl Marx. Are these lectures original contributions to the theoretical understanding of Karl Marx's theories, the 2nd International, the Bolsheviks, or the construction of the Fourth International on the ashes of the Third? Are these contributions breaking ground that none of the leading members of labor sought to address, addressed, or hardly managed to address? Are these lectures especially expository? Are Parenti's prognostications confirmed in reality? Has Parenti's lectures facilitated the development of objective rather than subjective consciousness? These are the questions that leading members of labor must answer whenever they confront the legacy of work the Bolsheviks championed with the establishment of the first workers' state. They require a profound appreciation for the body of knowledge workers have developed in the wake of their historic struggle. Few, if any, are familiar with this great body of work. It is called the "memory of the working class," and, while Parenti's lectures are largely impractical, he has, nonetheless, earned a spot in "the memory of the working class," for better or worse.

In contrast with Parenti's lectures are lectures like the ones David North or others delivered. While these lectures are tainted by the authors' collusion with the police State bureaucracy on one level or another (the actual number of which levels no one may ever know for sure), the lectures delivered from within labor are fundamentally different from those delivered from without. The emphasis on praxis, if even only rhetorical, elevates the delivery of Marxist responses to historical events far beyond a scholasticism. The emphasis in Marxism must never disconnect understanding of the present crisis from its solution. In so much as the exposed members of the Fourth International laid emphasis, however rhetorical, on praxis, they necessarily catapulted their ideas forward.

---

[330] Russian historians have not related the secret history of the Mongols to Russia's own secret history.

Michael Parenti sadly passed away during the Fourth Anniversary of the Ukraine war. An insightful source of thoughtful opinion about Marxism, Michael Parenti's lectures outlive him, burning a hole in the souls of the police State bureaucrats who orchestrated his removal from a tenured position at a university.

PBS () • PBS, the Public Broadcasting Corporation, similar to United Kingdom's British Broadcast Channel (BBC), voted to dissolve the corporation on Wednesday, January 7th, 2025, ending one of the greatest contributions to human intelligence in the history of American broadcasting. The dissolution occurred during the third anniversary of Ukraine's war.[331]

Petrov, Vladimir Nikolayevich () • Vladimir Nikolayevich Petrov (1915 in Ekaterinodar oblast, Russian Empire – March 17, 1999, in Kensington, Maryland) served a politically motivated sentence issued during Stalin's reign of terror at the Kolyma gold mine where he found the largest ever gold nugget in the mine's history. The Kolyma gold fields of the Soviet Far East became one of the major sources of the U.S.S.R.'s gold production.[332] He published a memoir on his experience under the title, *Советское Золото* (1949). The Stalinized NKVD, which is a dwarf compared to America's technologically advanced police State bureaucracy, subjected Petrov to an illegal arrest on February 17, 1935, a date whose 90th anniversary coincided with the end of the second anniversary of the Ukraine war.[333]

Peenemünde () • Under Werner von Braun's leadership, the Peenemünde Army Research Center, whose more than 1.87 billion documents[334] Braun handed over to the Allies before the end of WWII, projected humanity more forward in the field of rockets, aerospace engineering, or space studies than any of the efforts of the Allies during the war. Though Braun's Peenemünde documents haven't been released, their released may spawn not only the development of renewed interest in space and engineering but may significantly enhance the burgeoning capabilities of Artificial Intelligence.

In a film the Office of Armed Forces Information and Education, Department of Defense, produced, Dr. Wernher Von Braun, the director of guided missiles in Huntsville, AL. at the time, explained to an audience from the 1950s the challenge of space to Americans. Since Braun's explanation, no new American, native, repatriated, immigrant, or otherwise, has provided a fuller, more detailed, more thorough explanation than Braun.

Peña, Dan () • An incredible individual, Dan Peña believes a central feature of life is fearlessness. He says: "Once you become fearless, your life becomes limitless."

It is often the case that people in

---

[331] The Corporation for Public Broadcasting ceased to exist after the third anniversary of the Ukraine war.

[332] ["Gold Field Prisoner; SOVIET GOLD. By Vladimir Petrov. 426 pp. New York: Farrar, Straus Co. 4.," New York Times. October 30th, 1949.]

[333] Zelensky is a prototypical Stalinist. Zelensky's arrests are reminiscent of those the Stalinized NKVD executed, except they are the brainchild of America's gargantuan police State bureaucracy.

[334] Hutchinson details the Allied receipt of Braun's documents in his book, Weapons of Mass Destruction).

politics rather than business where Peña is a specialist consider things like legacy. In response to legacy, Peña's advice is to observe the former CEO of the American behemoth, General Electric, Jack Welch, whom Peña describes as "arguably the greatest CEO in the history of the world," when he proclaimed that "[there's] no such thing as work life balance. There are work life choice and you make them and they have consequences" and " you live with them." Peña says, " You're either all in or you're not." Politicians, who are concerned about legacy, must take Peña's advice; there are work and life choices and "you live with them."

Perelman, Grigori Yakovlevich () • Grigori Yakovlevich Perelman, a Russian Jew, is the greatest geometer of the 21st century. Born in the formerly besieged city of Leningrad, Perelman solved the soul conjecture in 1995, for which both Princeton and Stanford offered him positions but he rejected all of these universities for a position at the St. Petersburg Department of Steklov Mathematical Institute of the Russian Academy of Sciences, returning to his homeland. He worked there from 1995 to 2006. During that time, Perelman solved Poincaré conjecture. Rather than waste his time on waiting for one of the journals mathematicians in academia must submit their work for enumerating lists of publications (that tenure committees utilize to decide tenure), Perelman resolved on an entirely different path. Perelman bypassed all of these journals, publishing his own work by himself on the popular website arXiv. Perelman's decision was the first in many steps designed to demonstrate to his colleagues how the true pursuit of mathematics proceeds. Even though Perelman did not publish his findings in a major journal, Perelman's discovery of a solution for Poincaré's conjecture, nonetheless, earned him a place in the history of the greatest mathematicians in the history of the world.

Since Poincaré's conjecture had been a famous open problem in mathematics for the past century, the International Mathematical Union decided to award Perelman a Fields Medal for his solution. On December 22nd, 2006, the scientific journal, Science, recognized in Perelman's proof the solution to Poincaré's conjecture as the scientific "Breakthrough of the Year," a first in the area of mathematics. Perelman, however, responded to the IMU with the following: "I'm not interested in money or fame; I don't want to be on display like an animal in a zoo." Perelman thereby rejected the Fields Medal.

In his decision to reject the Fields Medal together with its prize of a billion pennies, Perelman performed an unparalleled service for all of humanity not just at that time, now, but for the future, for he made the IMU feel like what it is. One of academia's many zoos.

In particular, academia is one of the institutions the ruling elite around the world weaponize to oppress the freedom of thought at all points throughout all aspects of human curiosity. Just like the great mathematician, Alexander Grothendieck, before him, Perelman rejected the institutions 21 century set up to identify, influence or control mathematicians. Grothendieck, who burned hundreds of papers he had written in his rejection of 20th century institutions, abandoned academia in its entirety to become a shepherd with a flock of sheep in the French countryside. Like Grothendieck, Perelman quit academia to live with his mother in an apartment in his hometown.

It is clear from the behavior of these mathematicians, both of whom contributed immensely to the progress of human thought in different areas of mathematics, that the attempt to award their endeavors with prizes, rewards or trophies like the Fields Medal were met with rejection not because these mathematicians lack intelligence but for profound considerations over the ethics, morality, or standards of the field. It is certainly a sign of the times that the greatest geniuses, whose work soars above the great mass of people, have felt the need to reject everything these prizes, rewards or trophies symbolize. These things symbolize for Perelman, as they did for Grothendieck before him, all the trappings of a class dedicated to putting the freedom of thought behind bars like a caged animal.

Physics for Entertainment () • Published in 1912 in Russian, Yakov I. Perelman's famous book, Physics for Entertainment (i.e., Занимательная Физика, 140 парадоксов, задач, опытов, замысловатых вопросов и пр. с 160 рисуниками в тексте) enumerated no fewer than 13 publications by 1936. Having been translated by that time to Ukrainian (1925), German and Yiddish (1931), French (in Switzerland and Belgium), and Hebrew (in Palestine), Perelman's book intends to let people learn what they already know about physics. In the foreword to the first edition of his second book, intended to be a standalone book capable of being read with or without the first, Perelman writes: ”Настоящая книга «Занимательной физики», какъ и первая, предназначается для чтенія, а не для изучения. Ея цѣль—не столько сообщить читателю новыя знанія, сколько помочь ему «узнать то, что онъ знаетъ» , т. е. углубить и оживить уже имѣющіяся у него основныя свѣдѣнія по физикѣ, научить сознательно распоряжаться ими и побудить къ разностороннему ихъ примѣненію.” Widely read throughout the history of its publication in the years before the revolution, the book remains a classic today.

Planwirtschaft () • In his Habilitationsschrift, Friedrick Pollock presented one of the first analyses on the study of centralized planning in the Soviet Union in its first ten years. Published under the title, Die planwirtschaftlichen Versuche in der Sowjetunion 1917–1927 (1929), at precisely the time when the global economy crashed on Black Friday in 1929, Pollock's thesis is essentially an underhanded attack on Lenin's decision to nationalize Russia's private central banks into a single State owned industry. Before his integration into the Frankfurt School of Marxism, Pollock began his research into on Karl Marx's money theory at the University of Frankfurt's Faculty of Economic and Social Sciences under Siegfried Budge's supervision on March 15th, 1923. Entitled, ”Zur Geldtheorie von Karl Marx,”[335] the ultimate basis for the Frankfurt school of Marxism is not only a rejection of Marx's theory of money, value, or gold but an attempt to construction a subjective theory of the three in opposition to Karl Marx that could serve as an impetus for private central bankers to morass, speculate, or liquidate suprlus value in a seemingly never-ending psychotic heyday. Marxists, however, have not yet launched an attack against the foundation upon which the Frankfurt School of Marxism served as a theoretical backdrop for the Austrian School of Economics. The German pre-WWII obscurantism of the 20th century has manifested itself almost completely in the current State of America's politics.

Pick, Franz () • Franz Pick (1898 to November 30th, 1985) is one of the earliest analysts of currency in the globalized market. In an obituary on page B12 published on December 3rd, 1985, the The New York Times described Pick as an international currency analyst, a term extremely uncommon within the field of money, corporate finance or the economy. Born in Bohemia, a part of Czechoslovakia at the time of his death, at the turn of the 20th century, Pick studied at the Universities of Leipzig (See ”Die Karl-Marx-Universität Leipzig”) where he studied law and in Hamburg where he studied currency theory and in France, he studied at the Sorbonne in Paris. His degrees include a BS, MA, MBA, LLD, and PhD. During World War II, Pick served as the payment for the French Resistance, playing a major role in currency intelligence with a special emphasis on underground finance for Allied intelligence. As a result of his dedication to the defeat of Nazi Germany, which initiated a holocaust only the Red Army managed to stop[336] His experience with Allied intelligence first prompted his work in black markets, a term which has all but disappeared from common speech nowadays. According to an interview, Pick lived ”through the destruction of the Austrian krone, the Czech koruna, the German mark, the French franc, the British pound.” In regard to his experience with these currencies, he stated: ”The scheme of destruction was exactly the same as in the United States today, with intermittent deflationary trends along the way. The French franc went through numerous devaluations – maybe that is in store for us, too. By debasing the currency, we have endangered the economic existence of the US. We may be the richest nation in the world, but our assets are melting away before our eyes. American currency policy since 1940 has been nothing but an unbroken series of flops. By the end of October 1979 the unofficial purchasing power of the greenback had shrunk from 100 cents to only seven cents. This destruction and irreversible rise in the cost of living has been hidden by a deliberate lie called the Consumer Price Index. Most of those who own imaginary paper assets, including cabinet members, presidents of blue-chip corporations, and pension fund managers, do not want to know about the decomposition of what they believe they own.” In 1951, he first published his Black Market Yearbook, the first attempt by any economist to analyze currency black markets. He has published Pick’s Currency Yearbook since 1955, a standard reference work comprehensively reviewing over 110 currencies each year. In 1955 Dr. Pick initiated his now-famous currency seminars which have attracted top officials from the world’s corporations and governments. His deep knowledge of currency matters has put him on a first-name basis with the leaders of many nations and central banks. Mr. Pick came to the United States in 1940, first living in Chicago, Illinois before moving to Manhattan in the mid-1940s where he died. Even at the age of 87, with a brain tumor, he was ”still crusty, intellectually alive, and productive.” (pg. xiii)

[335] See Pollock, Friedrich, and Philipp Lenhard, editors. Marxistische Schriften. Gesammelte Schriften Bd. 1, ca ira-Verlag, 2018.

During the 1970s Pick became famous for his accurate, precise, prescient predictions on the price of gold. In an article published under the title, ”The Dollar Will be Wiped Out; the US will Issue 1 New Dollar for 100 Old Ones,” Silver and Gold Report (1980), Pick is quoted as saying ”gold will go to astronomic prices,” as governments continue to inflate. Pick at the time predicted that the dollar would rapidly approach zero value, warning against keeping precious metals in safe-deposit boxes in banks or investing in certain gold coins. Silver and Gold Report first interviewed Dr. Franz Pick, in August 1976, no less than four years after President Richard J. Nixon terminated the gold standard on August 15th, 1971, about gold prices collapsing to 50 or 60 US dollars. Asked if the drastic decline had shaken his long-standing faith in gold, Pick responding by saying, ”Not in the slightest.” Pick exclaimed: ”

---

[336] In the literature on the holocaust, few, if any, scholars acknowledge the tremendous debt European Jewry owes to the Red Army’s liberation of concentration camps in its victory over Nazi Germany.

Gold has no master. It is always victorious." Pick accurately predicted how the US would be forced to adopt a currency reform within two or three years that would include an exchange of 20 old dollars for one "hard" dollar, similar to the reform Alexander Hamilton imposed in 1789.[337] Silver and Gold Report interviewed Pick a year later. During the interview Pick predicted months ahead of time that gold would reach 165 US dollars an ounce. In July 1978, Pick predicted that gold would rise to "200, perhaps 220 US dollars per ounce," by the end of the year. By December 1978, when various asset prices rise before the Christmas holiday, gold reached a historic 226 US dollars per ounce.

Pick advocated for gold as a world currency. Pick began his own publishing house called Pick Publishing Company, through which he published Pick's Currency Report, a monthly newsletter, and Pick's Currency Yearbook. None of these publications are readily available in archives. Allegedly, Pick wrote more than 50 books on currency, and gave seminars on currency theory in the United States, South America and Europe. Only a few of these books have actually survived the sands of time.

One book in particular is extraordinarily elucidatory. It is called, The U.S. Dollar : An Advance Obituary. The third edition of the book is printed on a typewriter, indicating the degree to which mainstream resistance to critical thought reached even the most conservative layers of the America's ruling elite. It would be an understatement to claim the book has been suppressed. The third edition, for instance, contains absolutely no metadata; neither Pick nor Rosthenal (Pick's editor) mention any details regarding the first or second editions; the prefaces from neither the first nor the second edition are in the third edition.

The book is extraordinarily elucidatory because of the way in which Pick discusses the dollar. While ordinary consciousness considers the dollar to be a dollar, Pick does not. Pick differentiates the dollar according to its various differentiations at particular times in particular places, analyzing the dollar in a way few, if any, ever do or have. Pick's thesis on a " system of expropriation without compensation" is perhaps one of the first early attempts to explain debasement in terms of "purchasing power" without any reference to Woodrow Wilson, the US Federal Reserve or the elimination of the gold standard under Franklin Delano Rosevelt. Pick explains debasement by reference to a comparison of dollars, paper minidollars, which he does not name as US Federal Reserve Notes on purpose, official constant 1940s dollars as well as unofficial constant 1940 dollars. Occasionally, Pick mentions ”heavy” or ”hard” dollars.[338] It might appear hard to comprehend, as ordinary consciousness believes a dollar is a dollar but Pick's approach clarifies how a dollar is not only not a dollar but has never been a dollar, even though a dollar has always been a dollar. Pick is able to explain the internal contradictions within the US dollar to elucidate the process of debasement carefully with simple explains.

---

[337]

[338] "America's first currency reform concerned the continental dollar, which was first issued in May/June 1775 with the promise of redemption in hard money (Spanish-milled dollars) by November 1779. The amount in circulation rose from USD 6 million at the end of 1775 to USD 241.5 million at the end of 1779. By the end of 1776, the continental dollar was worth no more than 40. In April 1778, it was valued at one-sixth of face value. In 1779, only 2.5 was paid for the continental dollar. In 1781, 225 continentals were needed to buy one dollar in coin. The final quotations were around 500-1,000 to one in 1781, and there were unsuccessful attempts made to exchange continentals for silver dollars at a rate of 40 to one. Colonial state governments were uncooperative or bankrupt. A new monetary system was created in 1789 under the Constitution. Alexander Hamilton redeemed one hundred continental dollars for one "new," "heavy" or "hard" dollar. Out of the original issue of USD 241.5 million, only USD 168.3 million were presented for redemption, which simply cost the Treasury US 1.683 million. The only profiteer was the government." (pp. 74-75) In relation to inflation, Pick writes of Hamilton's monetary reform. " Inflations always run their course until there is little or nothing left of the purchasing power of the currency unit. After World War II, most South American countries became victims of the currency printing press. Brazil called in 1000 old cruzeiros for one new one; Argentina, Bolivia, Chile, Uruguay all had to reform their currency systems. Greece exchanged 1000 old for one new drachma. France had a 100 to 1 franc exchange. America's Continental dollar was first issued in 1775. By 1779 the amount in circulation had risen from USD 6 million to USD 242 million.

An example is Pick's description of the expropriation of America's middle classes. In his book, he writes: ”The evolution of the slow but sure expropriation of America's middle classes covers a period of 45 years. Its progress and results until the end of 1985 will be reviewed and examined in the following chapters based on current paper minidollars which in turn are recomputed into purchasing power based on an official constant 1940 dollars as well as into unofficial constant 1940 dollars. (pg. 16) Pick explains how the ”molders of public opinion,” whose career rests on manufacturing consent, are opposed to public exposure of the fact that at the time of publication ”unofficial value of the current minidollar” steeped to no more than 3.5 cents, a deterioration by more than 96.5 per cent from the 100 cents of ”purchasing power” from 1940.

Based on his understanding of inflation and debasement, Pick claims that ”bull markets are fundamentally nothing more than the inflation of equity values through the expansion of money and credit in the banking system. It is generally forgotten,” he writes, ”that the great 1927-29 bull market in stocks was the result of highly inflated corporate profits.” These surprisingly relevant resonate with time. The burst AI bubble, which occurred during the Fourth Anniversary of the Ukraine war in the US stock market, is a great example of a bull market fundamentally nothing more Han the inflation of equity values through an expansion of money and credit in the banking system. During the Fourth Anniversary of the Ukraine war, the only truly bull market, whose rising price neither

---

By 1781, 225 Continentals were needed to buy one dollar in specie coin, and final quotations ranged from 500-1000 to 1. Finally in 1789, Alexander Hamilton redeemed one hundred Continental dollars for one ”hard” dollar. Out of the original issue of USD 241.5 million, only USD 168.3 were presented for redemption, which simply cost the Treasury only USD 1.683 million. The only one to profit was the government. Of all the numerous currencies created since 1789, very few still exist in their original form. Practically all of them ended in the dismal gutter of shame, becoming virtually worthless except for the paper on which they were printed. All of them eventually expropriated their owners who had no recourse to the government that created them. This monetary shame is a substantial, if not the dominating, aspect of our present civilization.” Pick's discussion of the ”heavy” or ”hard” dollar, restricted as it is to narrow minded nationalism, does not comprehend the full scope of implications the introduction of a ”heavy” or ”hard” dollar would have for a currency, whose integration into the global financial system makes the US dollar is not only the most prominent in the history of mankind but the most technologically advanced. Of the analogy relating the US dollar to the pound sterling, Pick writes: ”The mismanagement of the dollar is similar to the mismanagement of the pound sterling, which eventually forced the liquidation of the British Empire.” While Pick relates the demise of the US dollar to that of the Pound Sterling, Pick makes no mention of advances in telecommunications at the time of his writing the book. In his list of examples (i.e., in West Germany 1948 (10:1), France 1960 (100:1), Brazil 1967 (1,000:1), Argentina 1970 (100:1), 1983 (10,000:1), 1985 (1,000:1).), Pick cites none related to Great Britain. (pp. 81-82) The only currency with the scope of the US dollar is Rome's. Neither a ”heavy” nor a ”hard” dollar can reverse the disintegration of the US dollar from the global monetary system.

[339] In one of his works whose accessibility is severely limited, The Triumph of Gold, Pick details how gold triumphs over the value of fiat currencies. The marginalization of Pick's works, which is discussed below, has effectively drove Pick's books out of print so that few, if any, copies still exist. Libraries, even inter-loan libraries, have restricted access to his books, eliminating books like the aforementioned, from collections. Current prices for Pick's The Triumph of Gold range from 111.99 to 188.99 (i.e., from 1/40th to 1/25th a troy ounce of gold according to the price at 4437.5 on August 14th, 2026). Digital censorship, which differs substantially from direct censorship, has coincided with the rise in the merger of the Magnificent 7 with America's police State

inflation of equity nor the expansion of the money supply caused, became gold.[339]

Pick believes the "The Great American Inflation," born on January 31st, 1934, began when FDR raised the official price of gold from US 20.67 to US 35 per ounce with foreign exchange controls subsequently removed on November 12th, 1934. FDR had already foreshadowed the use of inflation to generate economic activity with the requirement that Americans surrender private ownership of gold to the Federal government on April 5th, 1933.

Pick believes the age-old theory of money supply arose during the 16th century first with Bodin in 1566. Later, he claims, Davanzati in 1955 elaborated to the early thought on the matter. Pick attributes its refinement to Irving Fisher in the 1920s and 1930s. (pg. 26)

Pick is one of the first critics of the Consumer Price Index. Although Pick does not offer a systematic critique of the CPI, his statements about the CPI demonstrate how closely Pick has analyzed its role in the functionality of the US dollar under the Federal Reserve. It is a key component in his understanding of the "expropriation" the US Federal Reserve oversees with its weaponization of the US dollar. (pp. x, 6, 11, 21) Pick views "Washington's aim in the years since world War II only to stop the rise in the consumer price index, but never the inflationary process, which is now so necessary to avoid an economic breakdown." At the time of the third edition, Pick claimed that unofficial per annum inflation reached double digits at 30 per cent. Pick is one of the first to criticism GNP computations for public consumption. In that regard, he wrote: "[All] GNP computations for public consumption as well as for so-called "investors" in the stock market are based on melting monetary values uncorrected to the base year of 1940 to reveal the extent of the disease of currency debasement." (pg. 29)

Pick believes the US has a secret anti-gold policy. He states: " Sometimes open, sometimes latent, [the anti-gold policy] became a weapon to divert attention from the dollar tragedy by showing the holders of greenbacks that gold, too, would not protect them and that, in the end, United States currency and debt certificates would be better than any kind of non-interest producing bullion." (pg. 59)[340] Pick inverts the rising price of gold a falling price in Table 16 (pg. 60) by analyzing its underlying value with 1940 official or unofficial US dollars, cryptically labeling the process "debasement," when in all reality "debasement" is hardly the term. Gold cannot be debased, since gold 1) not only remains constant but 2) is not a fiat currency. Debasement, for instance, refers exclusively to the devaluation of a fiat currency by (hyper)inflation. It is the semblance of debasement, for the limited period of his comparison (i.e., 45 years) represented greater time under rather than over the standard. Pick's semblance of debasement is therefore the first time an economist reveals the processes by which a gold standard fixed to a fiat currency transitions. The transitions or the way by which an economist may identify the transition is by way of an inversion in debasement. The debasement of a currency fixed to the gold standard undermines the price of gold in contemporaneous comparisons of the fiat currency to a point when the currency fixed to

---

bureaucracies, one of the consequences of which is restricted access to Pick's books. Based on Pick's understanding of bull markets, predictions on August 14th, 2026 contend that by a division of the US money supply (USM2) the SPX (i.e., the S&P500) crashes at 8,200.

[340] "During its heyday in the 19th century, the purge gold standard formed the basis for the Western world's most successful period of industrial and financial development." (pg. 57)

[341] In the event that gold, against which China's renminbi is increasingly more often fixed than any competing currency, displays a "semblance of debasement" by way of contemporaneous com-

the gold standard escapes. A currency escaping a gold standard therefore "debases" the price of gold.[341] Pick accords his analysis on the nominal price of gold with an analysis of America's "gold stocks." The United States witnessed a fall in gold stocks. In 1940 the US held 19,551 metric tonnes. In 1949, the US held 21, 861 metric tonnes. In 1970, the US held 9, 864 metric tonnes. In 1971, 8, 349 metric tonnes. In 1972, the US held 8, 594 metric tonnes. In 1973, the US held 8,619 metric tonnes. In 1974, the US held 8, 546 metric tonnes. In 1975 the US held 8, 546. In 1980, the US held 8, 222. In 1985, the US held 8, 170 metric tonnes. The "semblance of debasement" for gold therefore accompanies a drop in gold stocks.[342]

Pokrovsk () • A highly contested Ukrainian village where one of Ukraine's richest billionaires, the oligarch Rinat Akhmetov,[345] the owner of a Western aligned holding company called Metinvest Holding, LLC With operations in Ukraine, Italy, Bulgaria, the UK and the US, lost more than half of his total coal production in Ukraine on December 14th, 2024.

It is possible to describe the battle of Pokrovsk in terms of a continuum stretching from the battle of Avdiivka to the city's fall on September 12th, 2025 when the Times launched a calculated disinformation campaign designed to deceive readers into the false belief that Ukraine's defense of the city had succeeded in villages surrounding Pokrovsk. The news story, entitled, "They're encircled, and we'll wait until they surrender, withdraw or die' where the Times claimed " Ukrainian troops surround hundreds of Russian infantrymen reviving hope after a brutal summer and, they say, swaying Trump in their favor." [346] The article is one of the least well designed disinformation campaigns in the history of the war. The charts the author provides are transparently false. The diagram that it provides of Dobropillia does not display a circle; it does not demonstrate by way of shapes what is encircled. It has a series of fortified lines. These lines are not connected in a circle or encirclement. It show arrows from Ukrainian counterattacks. While an encirclement may ensue from a series of counterattacks, an encirclement arises after the exploitation of weak point leads to a line hardened by defenses. There are no lines hardened by defenses after or between the counterattack arrows. The fire brigade, Azov, already reconstituted more than four times with more than four changes in its commander,

---

parisons of China's renminbi, economists may accurately predict with relative accuracy when China's renminbi will begin to escape the gold standard.

[342] The drop from 21, 861 metric tonnes to 8, 170 metric tonnes, a difference of 13, 691 metric tonnes or 62.6 per cent in 36 years, represented the fastest decline in the largest gold stock in the history of mankind.

Pick's denigrating remarks about the US dollar are certainly the source of his marginalization.[343] At the time he published his book, the US had passed into the third stage of America's decline in global superpower. Pick's remarks were thus well ahead of his own time. While Pick did not derive the source of the process of "expropriation"[344] from the extraction of surplus value, his comments about purchasing power in terms of different dollars provides an exceptionally far-sighted view of the monetary cosmos capable of allowing those who apply his adopted measurements to askance unprecedented foresight into the machinations of money, the stock market and the stock market. Pick operated in opposition to the soft money policies with which various factions within America's ruling elite have perpetrated their rule over the country.

[345] Described in the El País as "El 'Abramovich' de los miners," "el magnate del Shaktar," Akhmetov has paid no single Ukrainian nor any member of his or her remaining family a death gratuity for the defense of his private assets in Pokrovsk or anywhere else in Ukraine. While private interests like Akhmetov's Metinvest Holding, LLC are the sole beneficiaries of Ukrainians' blood, sweat, and tears in the defense of Ukrainian villages, no slav has received a cent for spilling blood and guts on the Ukraine for oligarchs like Akhmetov, who has "la sexta mayor fortuna de los países del Este. [September 28, 2004].

[346] The last part lasted no longer than a few weeks. Centered on the discussion of Tomahawk missiles, the missiles never came off the ground in the U.S. The Ukrainians are still waiting for those Tomahawks months later.

was already dispatched to Pokrovsk's defense but alas changed little to nothing for the Ukrainians dying to protect Metinvest Holding, LLC's assets for "El 'Abramovich' de los miners." It was a last stage for securing the city from collapse but the stage fell through the floor. The characteristic lack of Ukrainian command was highlighted in the article when the Azov commander admits how only after being locked into a room for more than two weeks with a joint HQ, Corps command was restored. In the middle of a pitched battle lasting months, the fire brigade arrives to restore the chain of command. It reads like a foregone conclusion.

[TO DO Pick's 3-1 debt to black market economy ratio]

Propp () • Vladimir Propp (i.e., Владимир (Герман Вольдемар) Яковлевич Пропп (16 [28] апреля 1895, Санкт-Петербург — 22 августа 1970, Ленинград)) is a Russian philologist who wrote a groundbreaking book on the structure of plots in literature, demonstrating that literary plots conform to one or more 31 known plot twists, expanding on Aristotle's Poetics. His famous work, the Morphology of the Fairytale (i.e., *Морфология сказки*. — Л.: Academia, 1928.) argued that a plot in a story confirms to one of the 31 known types of plots in his list. Propp's book, published in 1928, is one of the many gems from Russia's roaring 20s, the period of relative stability after the peak of the Russian civil war when Russian revolution facilitated soaring contribution to human Enlightenment. The 100th anniversary of Propp's book coincides with the sixth anniversary of the Ukraine war in 2028.

Public Law 117-109 () • On April 8th, 2022, just months after the beginning of the Ukraine war, the 117th U.S. Congress passed a law called Public Law 117-109. With a short title, "Ending Importation of Russian Oil Act," the legislation is one of the first sanctions against Russia. Encoded as 22 USC 8923, the law is one of the least successful in the history of American diplomacy. It passed 100-0 in the Senate and 413-9 in the House of Representatives under the Biden administration. In the immediate aftermath of Russia's full-scale invasion of the Ukraine, Russia, however, recorded record profits from the sale of Brent crude.[347]

Q

qaf () • A gorgeous vocal flower in a bouquet of illustrious Arabic sounds, qaf[348], the voiceless, uvular plosive, bristles alongside ^{c}ayn, the voiced pharyngeal fricative, za, the pharyngealized voiced interdental fricative, /x/, the voiceless uvular fricative, or /g/, the voiced uvular fricative.

The letter qaf[349], however, may be the thorniest rose in Arabic. Along the lines of its velorization, a great many scholars, not the least of which became famous, demonstrated how the way qaf became pronounced, distinguished sedentary from nomadic tribes. In his seminal contribution to the study of Arabic, Professor Haim Blanc, a blind Israeli veteran, argued that the velorized transformation of the phoneme in Arabic served to distinguish the dialect nomadic Bedouins spoke in Iraq from sedentary tribes there along the lines of Mesopotamia. His book, The Communal Dialects of Baghdad, relied heavily upon careful attention to the way Arabs from Iraq spoke Arabic.

---

[347]

[348] The letter qaf is immortalized in a cartoon from 1976 produced within the framework of an Arabic version of Sesame Street. In the cartoon, qaf covers a shining moon and the tunes of the law, traveling from the castles, pyramids and great monuments of Cairo to the Dome of the Rock in Jerusalem; the cartoon covers a family of cats traveling in a boat, and a family of monkeys in a train that crosses between a city without limits.

[349] In the Quran, the letter has become the title of the 50th chapter, consisting of 45 verses. It opens with the Arabic letter "Qaf" and focuses primarily on resurrection, the Day of Judgment, and God's power.

Qom, Iran () • Qoms, Iran, rose in significance after several months of ineffective and ineffectual war with the United States of America and Israel. After the imposition of a blockade on Iran's maritime shipping lanes in the geopolitically significant trade route, the Strait of Hormuz, Iran began to adopt the strategy called, Pax Mongolica, a restoration of the territorial trade routes on the Eurasian continent that Ghengis Khan established with the Golden Horde before the end of the Middle Ages.

On October 29th, 2026, Iran has launched its first container export freight train from Qom to China, a strategic route to bypass US maritime restrictions from U.S. President Donald J Trump's illegal war of aggression on Iran. Amid a dispute over insurance major insurers like Lloyds of London have refused to issue,[350] the volume of rail freight from China to Iran has increased tenfold, and the frequency of Chinese trains arriving in Iran has increased from once every three to four days to once a day. Before the war, a Chinese train entered Iran through Kazakhstan and Turkmenistan every three to four days. The frequency has since increased to one train per day, demonstrating how Iran resorting to overland trade routes with China has not only demonstrated how irrelevant major waterways like the Strait of Hormuz are but how countries like China, one of the alleged targets in the geopolitical struggle for dominance on the Eurasian plateau, advanced trade in opposition to the Western embargo.

Iran's dispatch of the first container to China by rail only a few months after China finished the China-Iran railway - the backbone of the East-West connectivity corridor - on April 26th, 2026, follows Iran's expansion of territorial trade routes. The Iranian Kloran Company shipped more than 460 tonnes of sodium chlorate to the Semnan industrial town in Turkey, replacing approximately 20 to 30 trucks on the North-East Railway.

Q-Bert () • Q-Bert, a famous musician, celebrated the 30th anniversary of a competition he lead at the head of the so-called Invisibl Skratch Piklz against the so-called X-Men on July 27, 1996. A major event in hip-hop, the competition reflected the high watermark in the history of American competitiveness that America's vile, anti-Constitutional, corrupt, illegal police State bureaucracy, which has become like a vast, sprawling, ever widening leech on the the Federal government's neck, has sought to subdue in pursuit of authoritarianism. The competition occurred in 1996 freely without the police State bureaucracy orchestrating a victory for either side.[351]

---

[350] A dispute over insurance in the Strait of Hormuz led inevitably to both Russia as well as China seeking to establish an alternative to Lloyds of London for major maritime shipping on the routes most important to the two major powers. The dispute, which mainstream media has not covered in detail, is one of the results in the fifth period of America's declining superpower. An Eurasian, far less costly than a Western, insurer adds to Western woes over Eurasian expansion. [TO DO]

[351] The lesson about fixed fights Quentin Tarantino sought to teach Americans with Bruce Willis during the famous fight no one saw like the bank robbery in Underdogs from his movie, Pulp Fiction is now the standard practice for the police State bureaucracy. Marcellus Wallace would have phrased his request in an entirely different manner, had he known that in his fixed fight Bruce Willis fought more than his pride. Willis fought corruption. In his defiance against Marsellus Wallace, Willis thus provided a truth, a way, a light for all Americans to follow in the fight against corruption, for America's corruption has not only sought to fix fights but such a large briefcase of different things that Marsellus Wallace himself would be surprised. He would be more surprised at America's corruption than his friend's foot massage for his wife. Would he do to the Federal government what he did to his friend? Should Americans follow in Marsellus Wallace's

The International Turnablist Federation (ITF), an organization designed to inspire competition among American musicians during the rise of underground hip-hop in the late 1990s, hosted the first 1996 - Total Eclipse - First ITF battle where musicians competed against one another across a broad range of categories whose establishment the ITF introduced: advancement, scratching, beat juggling, and team. Although Invisibl Skratch Piklz ultimately lost the team category in the first ITF battle in 1996 to the X-Men, over the years fans celebrate both winners. The recording of the event is still celebrated. While these musicians might not have earned the money their lavish counterparts gained from selling diamonds, chains, perfume (i.e., Dior), prescription pain killers (Percocet, Vicodin, or other forms of hydrocodone), syrup (i.e., Promethazine) or alcohol in covert advertisements for popular luxury goods, these musicians had a far greater impact on music than any of commercials the richest ”rappers” debuted for multi-million dollar brands.[352]

Quartermaster General Montgomery Meigs () •

On the eve of the battle of Beaver Dam Creek, McClellan, whose generalship during the Civil War led Lincoln to doubt his abilities, entrusted analysis of the impending battlefield and his opponent to none other than Allan Pinkerton, ”whose intelligence reports were detailed, explicit, incredibly wrong.” (Catton, 1953: pg 169). In Pinkerton’s analysis of Lee’s strength prior to the battle, McClellan believed Lee had ”one hundred and fifty thousand and two hundred thousand men, possibly more.” (Catton, 1953: pg. 170) Actually Lee’s strength, however, consisted of substantially fewer troops, while some estimates even say as low as 20,000 to 50,000 men. The vast majority of these troops, spread out in different parts of Virginia, represented less of the powerfully centralized hammer McClellan conveniently imagined to leverage against his excuse to engage in a direct confrontation. Nonetheless, McClellan ”believed that he was outnumbered because it was his nature to overestimate his disadvantages.” (Ibid.)

In contrast to McClellan’s reliance upon a State sponsored, Federally funned, un-enlisted member of the Amry, stands Quartermaster General Montgomery Meigs. A fat, bearded, old man with a penchant for late night reading, often harangued for petty squabbling, outwitted McClellan with the flick of a wrist. Meigs, whose spies sourced information from newspapers, gathered up a huge pile of Richmond newspapers, reading through each one with a fine tooth comb, nitpicking any mention of Lee and his army.

While McClellan sat and waited, Quartermaster General Montgomery Meigs “[away] back in Washington combed the Richmond newspapers that spring.” (Ibid) Meigs with characteristic obsessiveness made note of all the units mentioned in regards to Lee, infantry brigades, regiments, companies or battalions. Meigs assembled this collected information from these news sources openly available to the reading public into a single report the bayonet end of which he fixed straight at McClellan. Meigs ”added this [information] to other intelligence that was coming out of the Confederate capital, and made a very fair appraisal of Lee’s manpower.” Gen-

footsteps?

[352] Released on February 17, 2017, Future’s ”Mask Off” reads like a brochure on prescription pharmaceuticals for sale. An advertisement for ”Dior” is visible from a song by American rapper Pop Smoke, originally released on July 26, 2019, by Victor Victor Worldwide and Republic Records as a track from his debut mixtape Meet the Woo; Pop Smoke mysteriously disappeared; there is a chance that many ”rappers” like Pop Smoke entered into a ”witness protection program” that enables them to live an invisible life with untold wealth, a kind of paradise set up alongside or in opposition to the reality the vast majority of people face.

eral Meigs “found ninety regiments of infantry, one regiment of cavalry, and five batteries of artillery designated by name in the ”Confederate” newspaper reports of the seven days’ battles. Comparing this with other information from similar sources, he concluded that Lee had about one hundred and fifty regiments. “These, at 700 men each, would make 105,000, or at 400 (which he found a full average) the gross of the infantry would be 60,000.”

In contrast with McClellan’s report from Pinkerton, Meig’s estimate reduced the Pinkerton by two to three thirds. McClellan’s estimates on Lee’s troops and army therefore exceeded the actual number by more than sixty to seventy five per cent. Moreover, Meig’s observations and his report discerned far more detailed information about Lee’s troops and units from the “Confederate” than Pinkerton’s report. Meigs uncovered a huge blindspot in Pinkerton’s report. Despite Pinkerton’s report “being detailed” and “explicit,” Pinkerton’s report lacked details about Lee’s cavalry and artillery. Overall, Meig’s ability to read the “Confederates” turned out be far more powerful thank Pinkerton’s own reading.

Meigs’s allowed him to make a fair appraisal, leading to substantially different results than Pinkerton’s. Meigs’ fair appraisal could have led to entirely different conclusions about the nature, strength or weapon power of Lee’s army in Virginia in 1862, had McClellan applied Meigs’ method. Meigs’ method is not an intellectual feat of genius. It is purely common sense. [353] Even so McClellan’s approach had severe consequences, intended or otherwise. Catton argues that McClellan’s failure to achieve what Meigs achieved from newspapers contributed to McClellan’s personalist choices on the battlefield. While Catton attributes a great deal to McClellan’s personal beliefs, the difference in the field assessments at that time indicated for Catton that McClellan lost an opportunity to attack Lee’s army early in the war. The result not only led to a longer civil war but to a less than even outcome when McClellan finally fought Lee’s understrength army.

Quantum () •

The mere sight of a dilution fridge resembles the Atanasoff-Berry Computer (1942) or the ENIAC (1945), enormous, complex, excessively intricate machines with a singular focus that consume large amounts of electricity. These cannot be the highest bar humanity can reach. The process of discovery begs for a breakthrough.

The obsession with quantum physics is an obsession with a story about neutrons, electrons and photons; Niels Bohr’s discover that an atom’s electrons and photons circle about the neutrons like the heavenly bodies is a forgotten perspective in the fanfare around the obsession. A sundial is many times more accurate than an atomic clock because without the sun there is no time. Time itself is so intrinsic to the sun that sunless time is simply not time.

Fuzziness sounds like apparitions. Anyone with even a rudimentary education in the history of cosmology and physicks reads entanglement like Ptolemy's apparitions. Ptolemy's system, alive for a far longer period of time than quantum physics with a far greater history of observation than quantum physics, enjoyed a far greater history of predictive power than quantum mechanics. Ptolemy's Algamest predicted celestial events like eclipses and planetary positions, empowering the ancients with the ability to see the clouds before they formed. Predictability is thus no more of a reason to believe quantum mechanics than Ptolemy's Algamest.

---

[353] The Central Intelligence Agency’s emphasis on a systematic violation of the National Security Act of 1947 has placed the agency at a disadvantage with respect to understanding America’s history. It is easy to prove how time and time again the agency’s defiance of its mission has led to error after error. Even in its appraisal of the American civil war, the agency’s inability to analyse the role Quartermaster Meigs played is apparent. In a document entitled, Intelligence during the Civil War, for instance, the manual discusses intelligence makes no mention of Meigs or the fact that Meigs’ analysis of the “Confederate” newspapers represented the first recorded instance of open source analysis by military intelligence. How can the world’s premier foreign intelligence service forget to mention Meigs’ analysis of the “Confederate” in arguably the first open source analysis in America’s history, if not military history in general? [”Intelligence during the Civil War,” The Office of Public Affairs.] The manual is so shoddy that there is no date of publication. No one knows what year the CIA published its clueless manual on Civil War intelligence. It might be time for agencies like these alphabet agencies to kick rocks.

Einstein, a great theoretical physicist, appears when we observe him but disappears when we do not; Einstein's intuition, which is not ordinary human intuition, is far more informative than the opposing points of view on quantum mechanics. Einstein's suspicion about EPR[354] bears a strikingly resemblance to Ptolemy's epicycles. The incomplete part of the theory of quantum mechanics is replaced with the imposition of our assumptions about the perfection of the paths heavenly bodies map out in equal times with equal areas. Just as two circles, neither real, affected the path of the heavenly bodies in Ptolemy's Algamest by virtue of our own ambition to imagine things as they should be to us than they are in fact, so objects separated in space and time are connected with a line of communication in excess of the speed of light in quantum mechanics. Einstein's proof, discounted only by statistical data for a correlation (without causation) corresponding to entanglement, is thus still solid reasoning.

quibuit () • There are a lot of problems with the quibuit that relate back to the problems of physics.

R

Racehorse () • The death of Richard Haynes "Racehorse" (April 3, 1927 – April 28, 2017), a decorated veteran, a Texas criminal defense attorney, coincided with the end of litigation in the United States of America. After Racehorse's death, the Courts ceased to be a factor in litigation but a function in a vast, sprawling, anti-Constitutional conspiracy against the origins of American democracy beyond anything imaginable under the flag. The police State bureaucracy, in which the local police are merely pawns, direct the Courts to order as the police State bureaucracy sees fit, regardless of the law. The law is no longer relevant. It is merely a device for semantics the Courts must occassional adjust, right or left according to the prevailing gust of political wind, to secure the façade of justice for what is otherwise nothing more than an unjust cherade.

RAFFINOR-BF () • As Lebanese supporters of the Shia leader, Hassan Nasrallah, mourned the second anniversary of his assassination, President of Burkino Faso, Ibrahim Traoré, inaugurated a new refinery in Africa, called RAFFINOR-BF,[355] Burkino Faso's first gold refinery under Burkina Faso's control, opened no less than 66 years after its declaration of independence. Burkina Faso, one of the largest gold producers in sub-

---

[354] The paper Einstein, Podolsky, and Rosen published in 1935 celebrated its 90th anniversary during the third anniversary of the Ukraine war. Despite numerous attempts to corroborate quantum mechanics by way of statistics, the EPR paper remains without resolution.

[355] The post from X stated: "Le Président du Faso, Capitaine Ibrahim TRAORÉ, a inauguré ce 28 septembre 2026 RAFFINOR-BF, première raffinerie d'or du Burkina Faso. D'une capacité initiale de 164 tonnes/an, elle marque une étape majeure vers la maîtrise nationale de la chaîne de valeur aurifère." At 164 tonnes per annum (i.e., 5,272,715 Troy ounces with gold at 4,152.91 US dollars), Burkina Faso's refinery stands to provide an amount of gold equivalent to nearly eighty percent of the country's Gross Domestic Product, a phenomenal source of liquidity.

Saharan Africa, inaugurated the refinery in Ouagadougou. RAFFINOR-BF includes a foundry, an analysis laboratory, a secure storage area and a jewelry-making area. Burkina Faso's aims to refine all its metals on-site, including gold, manganese, copper, and zinc in an effort to fully control the extractive industry's value chain "down to the last detail," Traoré declared during the ceremony.[356] According to Burkina Faso's Ministry of Energy, Mines and Quarries, Burkina Faso produced 94 tonnes of gold from 15 industrial mines operating on several semi-mechanized operations for production in 2025, representing 2.56 percent of the 3,672 tonnes registered from mines globally. Announced to coincide with the the withdrawal of US troops from Iraq, the bloody, expensive, aimless "forever" war George Bush launched as a part of his multi-phased counterrevolution against falling US hegemony in the region, the US effectively handed control over the region to the overwhelming power of Shia backed popular militias. In a single day, Monday, September 28th, 2026, US hegemony in Africa and the Middle East changed forever.[357]

rats () • Responsible for the malfunctioning French Caesar 155mm mobilized artillery, rats eat the delicious corn wiring.[358]

railways () • Neither of the belligerents have achieved a distinct advantage from strategically bombing railways before the fourth anniversary of Ukraine's forever war.

Ravayate Fath () • Ravayate Fath, a documentary series assembled from footage recorded during the Iraq-Iran war, which lasted from September 22nd, 1990 to August 20, 1988, represents one of the longest seminal contributions to warfare on the Eurasian Steppes ever published. No modern documentary of modern warfare compares.

The thirtieth anniversary for that war may be celebrated during the sixth anniversary of Ukraine's forever war in 2028.[TO DO]

Red Grouper () • Anyone who believes the United States does not exceed the Комитет государственной безопасности (i.e., the KGB) in terms of the ever widening expansion of its police State bureaucracy is ignorant of America, America's agencies, or America's runaway legal framework. The extent to which the United States has centralized authority for what are nothing more than operations designed to launder money is so vast that America's police State bureaucracy makes the KGB look infantile. The case of the "red grouper" is a perfect example of America's KGB policies in action.

Red Sea () • During the Ukraine war, the Red Sea, one of the most important waterways for trade in the 21st century, gushed with importance.

---

[356] One of the other countries to fall during the battle of Bakhmut-Artemovsk became Niger. Niger's Prime Minister is quoted as saying on the same day that for more than half a centry, Niger's uranium has lit cities across Europe, while Niger's own cities remained in darkness, declaring that injustice over. "Our resources belong to our people. Our future will no longer be decided elsewhere."

[357] Feeling abandoned, Kurdish leader Masoud Barzani, president of the KDP, warned that Islamic State militants could regain strength in Iraq, drawing a parallel with the period before the group's 2014 expansion but urged Baghdad to ensure that weapons remain exclusively under government control, as though a lack of weapons alone could stop the ISIL caliphate.

[358] In an article published in Le Figaro on February 23rd, 2024, under the title, "Guerre en Ukraine : pourquoi les livraisons d'armes n'ont pas changé la donne, the author explains the majority of the equipment the U.S.-led NATO alliance donated to Ukraine is not adapted to the Ukrainian battlefield, including the French Caesar 155 mobilized artillery. Quoting a Ukrainian soldier as saying, « Les rongeurs ont mangé les câbles sur certains véhicules », the author details rats on the eastern front immobilized the Caesar's engine. He writes: « Les véhicules occidentaux ont été conçus comme une vitrine technologique. Mais dans la boue et le froid, ça ne fonctionne pas toujours ». The Russians, whose military equipment is rigorously tested, seized upon the French article, publishing an AI generated caricature of a single rat commanding a swarm of surrounding rats from atop a Caesar. [RT]

refinery () • Just before the fourth anniversary of the Ukraine war, China become the globe's leading refinery with a capacity at 18.5 mb/d, surpassing the America, a traditional oil giant, the globe's former superpower.

Regeni, Giulio () • Agents from Egypt's National Security Sector (Arabic: قطاع الأمن الوطني), Abdel Fattah el-Sisi's praetorian guards for his Thermidor against the Egyptian revolution, brutally murdered Giulio Regeni (January 15th, 1988 to January 25th, 2016), an Italian PhD student from the University of Cambridge on 25 January 2016, the fifth anniversary of the Tahrir Square protests that led to the overthrow of Husni Mubarak. Kidnapped in Cairo, Egypt on the evening of the fifth anniversary of Egypt's revolution, Regeni suffered such severe torture at the hands of Abdel Fattah el-Sisi's agents that he died in custody. Witnesses found his body near one of the gulags Abdel Fattah el-Sisi's praetorian guards maintain for the imposition of police State measures designed to secure his military junta.

Regeni's specialization in Egyptian labour is a reflection of a decades long study into Egypt primarily under the auspices of the prominent Stanford University scholar, Joel Beinin, who holds the title of Donald J. McLachlan Professor of History and Professor of Middle East History. Regeni's specialization, however, placed him in Egypt's direct line of sight, for Egyptian labor played the decisive role in the Egyptian revolution. It was not until workers, especially those in Port Said, began organizing a general strike that the spine in Husni Mubarak's regime, in comparison with which el-Sisi's makes angelic, broke. Regeni's death is therefore a sign that even under a regime based on police State authoritarianism funded almost entirely by irredeemable loans from the West Egypt's greatest source of power is not Egypt's new octagon[359] but the Egyptian masses.

Regeni's trial concluded during the fourth anniversary of the Ukraine war, just as several processes related to the Arab Spring began to conclude during the Ukraine war.[360]

Rembrandt () • Rembrandt, a famous painter from the Dutch Republic of Letters, lived from 15 July 1606[1] – 4 October 1669 in Leiden. Rembrandt's Belshazzar's Feast, painted around 1635, reminds us of the proverbial 'writing on the wall' that the ruling elite have sought to avoid completely. Although Rembrandt's Hebrew is defective, his message is solid. It is the image of what is inevitable. The passage from the famous painting proscribes the end to Belshazzar's kingdom. Just like Rembrandt himself, Belshazzar could not understand the writing on the wall. By the time Daniel explained to him, Belshazzar's kingdom's end had come.

China's renminbi (RMB) () • Just three weeks before the fourth anniversary of the Ukraine war, China's renminbi (RMB), the official currency of China, issued by the People's Bank of China, which is not a private central bank modeled after the Bank of England like the U.S. Federal Reserve, became the major competitor among currencies for leading the world in reserves. Xi Jin Ping, who concluded secretly with China's Communist Party to advocate for the world to adopt the renminbi, disclosed publicly China's aspiration the day after JP Morgan Chase short sold the precious metal market on January 29th, 2026, the greatest single movement in the history of the market of precious metals.

---

[359] Egypt's new octagon is less about external than "internal" security.

[360] The Syrian civil war, for instance, concluded when Abu Mohammedd Al-Golani, a ISIS terrorist the US Department of State sanctioned as such, ascended to power just before the third anniversary of the Ukraine war in a lightening offensive on December 8th, 2024, not only ending the Bashar regime's dynastic rule but concluding the long years of hard fighting in the Syrian civil war. In a major defeat for Russia's geopolitical standing in the greater Middle East, a consequence became the expulsion of Russia's armed forces from Syria. Al-Golani expelled Russia from its military outposts on the Golan Heights, thereby eliminating the threat Russia's support for Bashar's regime posed to Israel's northern advance into the former territories of the Ottoman Empire, Syria and Lebanon. Al-Golani compelled Russia to abandon its last warm water ports in the Mediterranean, Tartus, ending Russia's centuries old quest for warm water ports, limiting Russia's naval power in the wider waters of the former Ottoman Empire to no more than Sevastopol. Al-Golani's seizure of Russian-backed Bashar Al-Assad regime in Syria represented a coup de grace for Russia equivalent to the effect the expulsion of Western influence from the Sahel region during the battle for Bakhmut-Artemovsk had on Western interests in Africa.

Xi Jin Ping's statement followed a pronouncement for the creation of a strong Chinese central bank. Xi Jin Ping's statements thus stand in stark contrast with the idea of an " independent" central bank. The word "independence" is floated like a analogue to "freedom"; if only banks are "independent", they are "free"; since " freedom" is the highest aspiration of mankind, a bank must therefore " independent." Such are the machinations the Western ruling elite seek to inculcate through vile propaganda.

Commonly referred to as the yuan, the yuan is the result of dividing 10 jiao; a further division results in 100 fen. Short after the famous attempt to short sell gold into submission on January 29th, 2026, China's Xi Jin Ping announced China's ambition for China's renminbi (RMB) to become the new reserve currency for the world, ending months of speculation about the prospects for a Confederated BRICS "Euro"; in its announcement, China's ambition to replace America's power with its own is a commission of its fate to that of the replaced.

reverse engineering () • Right when the Ukraine war entered a bilateral strategic terminus following Russia's seizure of the southeastern Ukrainian village at Pokrovsk in the Donbas, the United States unveiled a drone carrier with one way attack drones copied from Iran's Shahed-136 drones, turning the tables on the Russo-Iranian approach to seized weaponry during the war.[361] After the first anniversary of the Ukraine war, Russia began trading seized Western weaponry from the Ukrainian battlefield in its payments to Iran for the Shahed-136/131.[362]

Reported primarily in the Arab press, social media for major Arabic news media such as Al-Arabiya and its white-labeled clone channel, Al-Hadath, posted stories with elaborate animations but the most fascinating analysis came from a multilingual news source called אל-חינאדק.[363] Reporting on an article from the Wall Street Journal[364], אל-חינאדק claims the

---

[361]] .. [

[362] By the fifth anniversary of the Ukraine war, Russia's development of the Shahed departed markedly from the basis of distinction according to which Iran delineated the Shahed-136/131. In contrast with Iran, Russia began to distinguish Geraniums by name, starting from 1 onward with the primary basis for the distinction dependent upon the motor. On top of the changes in motor, the Russians began to introduce major modifications both internally as well as externally. In a modification to the Geranium 2/3 с советскими управляемыми ракетами ближнего боя класса «воздух-воздух» Р-60М с эффективной дальностью до 4 - 5 км и инфракрасной ГСН ОГС-75Т "Комар-М" Russia miniaturized the mount for the УПМК Russia mounts to the bottom of jets for Shaheds. The integration of Soviet R-60M missiles represents a major transformation of the Shahed from a primarily single purpose one-way-kamikazee drone into a platform for combined arms warfare where both decoy as well as real Geraniums at the second or third motor, without or without the modification, are able to provide defense in flight against Ukrainian aviation (i.e., such as helicopters) with offense upon descent. In a video released on June 10th, 2026 (i.e., during the Fourth Anniversary of the Ukraine war), the day after CENTCOM announced Iran struck an Apache helicopter with a "drone," (Did Iran launch a R-60M missile at the Apache?), Рыбарь published a video on its Тактикарь channel, detailing the Geranium 2/3. The video stated: "Пока с Р-60М были замечены лишь «Герани» второй и третьей серии с двигателем внутреннего сгорания. Ни реактивную «четверку», ни «пятерку» пока на поле боя не видели. Но их появление - лишь вопрос времени."

[363] :] " , - , 05 [

[364] "]Pentagon Deploys New Kamikaze Drone Copied From Iranian Design," Wall Street Journal, December 3r, 2025]

American copied Shahed-136 drones represent a change in the Pentagon's approach to weaponry where the U.S. is developing reverse engineered technology seized from a foreign battlefield in an overseas conflict.

On the manufacturer's website, LUCAS calls the drone the FLM 136, copying the number assigned by HESA to the Iranian drone: ”Reverse-engineered for authentic threat emulation. With a professional airframe, broad performance capabilities, and multiple launch options, it offers unparalleled mission versatility. Its large payload capacity, drop-in module compatibility, and multiple auxiliary bays ensure ongoing compatibility to meet your evolving needs.” In response to the specifications for drone's capabilities, אל-חינאדק criticizes the drone for falling short of the Shahed-136 in the Ukraine war; the Russian Geraniums, for instance, travel more than 2,000 kilometers; the FLM 136, however, travels no farther than 822 km, less than half the speed of the Russian Geraniums. אל-חינאדק considers the FLM 136 to be a plasticine board for marking America's jump off point in the new, ever evolving, global drone race.[365]

relativity () • It is often the case that far more is forgotten than remembered. It is more often the case that of the things remembered far more is forgotten. So it is for Nicolaus Copernicus, the greatest luminary of the 15th century, . In his book On the Revolutions of the Heavenly Spheres, first printed in 1543 in Nuremberg under the Holy Roman Empire, Copernicus destroyed three millennia of thought through his provision of a model superseding Ptolemy's geocentric system.

Copernicus is the first to mention far more than merely the centrality of

---

[365] Russian modifications to Iranian reverse-engineered Shaheds present a significant development in the sphere of weaponry with profound implications for Europe. The Shahed represents less a weapon than a moment in the unification of the Eurasian powers. The modifications demonstrates that the Eurasian powers are able to transform internally allied innovations from one major modification to the next, demonstrating fluid interoperability. Eurasian interoperation, whose significance only the British have been able to recognize, draws into sharp relief Europe's inability to unify. Apart from British-driven engineering, of which there are only a few examples, the Europeans are spinning their wheels, failing to pass the baton from one athlete to the next.

[366] Under the Arab empire Muhammad established from the 7th century onward, the Semitic conception of time evolved. The Semitic tradition, our tradition, is far more concerned with ” time than space.” (Heschel, 1951: Prologue, The Sabbath) Embedded in the earliest discussions of mankind from Babylon are discussions of time; in the Old Testament, the creation of the universe is ”paradoxically” measured in terms of the number of ”days” (presumably measured by the sun and night), the creator takes to craft the earth and the skies but the earth remains fixed.

The Quran preserves the Semitic narrative (54:7) but neither sun nor the moon are anchored to a fixed earth, suggesting through interpretation the realitivity of the sun through coiling. Night and day coil (i.e., 31:29 and 39:5) while the day comes from different points of the Orient but the night from different points of the Occident (70:40; 55:17; and 43:38). Coiling, the root of which verb in Arabic is كور, recalls the type of rotation in situ a person describes about his head for a turban. The argument is that the relativity of the sun derives more closely from an interpretation of these Quranic verses than from the supersedure of Ptolemy's geocentric system. Reading verses like 13:2, 31:29, 35:13, and 39:5, however, against the Old Testament certainly liberates, emancipates, or exalts the concept, for in those verses Muhammad exclaims the existence of a course for the sun. In fact, 36:38 attributes a destination to the sun's course (i.e., the solar apex at a point in alpha lyrae). While these interpretative approximations are in no way an equivocation to the system Copernicus envisioned, they completely dispel the myth of a universe with the earth at the center without a sun in an orbit.

Dependent upon a notion of time associated with cosmology, a few scholars reject these considerations in favor of the idea that Muhammad's revelations expound the complete absence of time altogether. The idea, they claim, lead inevitably to its most modern expression in Julian Barbour's idea of the unreality of time from End of Time (1999). In his book the unreality of time comes not from Mach but an article the Cambridge idealist J. M. E. McTaggart (1866 - 1925) published. In an article called “The Unreality of Time” that McTaggert published in Mind (1908), McTaggart negated the existence of time on the basis of our assumptions about consciousness. McTaggert, who is not a philosopher, posits the existence of a requirement that a conceptualization of a thing must not be contradicted but without argument he claims the application of his the sun to the earth's orbit. Copernicus is the first founder of the theory of relativity.[366] In his establishment of a heliocentric system opposed to the geo-centric, Copernicus's revolution not only accounted for the earth's three motions about the sun but unleashed a way of thinking so profound as to seed the growth of relativity. Relativity turns Copernicus' thought on its head, opposing the systems in relation to the observer, just as Copernicus himself opposed the Ptolemaic system from his own point of view. While many remember Copernicus, many have forgotten his words. Of the words they remember, far more has been forgotten.

Russia (Russ · ia) Noun • Russia is one of the belligerents in the Ukraine war. In comparison to Ukraine, Russia's history of war in the area from the Black to the Baltic seas is extensive.

Russia () • Learning how to speak Russian fluently is really simple. It is a really easy language. It is far easier than the Romance languages (i.e., Italian, French, Spanish, or Portuguese), Germanic languages, or the ancient languages like ancient Greek or Latin. It is easier because the tense system in Russian contains far fewer forms than in those languages. The case system is far more regular than in German, ancient Greek or Latin. To learn how to speak Russian fluently, you need fewer than ten books.

A book entitled, *«Краткий Толковый Словарь Русского Языка»*, is your first book. It contains all of the 5,000 most common Russian words for fluency. You most immediate goal should be to learn these 5,000 Russian words. Published in 1989 by the Russian Language press called *Русский Язык*, the book is designed especially for foreigners like you with explanations in simple Russian marked for emphasis from entry to definition. Some but not all of the entries contain translations in English, French, Spanish and German. These are really helpful.

You should pass through this book three times. The first time should be immediately after learning the alphabet. The second should be after completing your first textbook. The second time should be immediately after completing your second textbook. The third should be after reading through one or more of the famous Russian authors like Gogol, Turgenev, or Chekov. If you are able to recall definitions for words from random pages after these three passes, then you probably know these 5,000 words.

The first textbook you should read is an old textbook from the 1940s. One of the most successful guides to the Russian language in English, Essentials of Russian by Andre von Gronicka and Helen Bates Yakobson, is the best textbook for introducing students to Russian because

---

standard negates the self-contradictory reality of time itself. In the absence of an understanding of a contradiction, any discussion of time, however, is utterly hopeless. The basis for Aristotle's own conception of the principle of non-contradiction, for instance, relies on the assumption that a thing cannot be but one way at a time, lest the idea of speech itself become moot. Hence McTaggert's discussion of time belongs not to physics but to philosophy.

The verses these scholars cite to reject Muhammad's considerations of time are precisely the ones that support Einstein's theory of relativity. Verses 32:5 and 70:4, for instance, suggest in the former how a day may be traversed in a thousand years, while in the latter the same may be in 50,000 years. These verses are far more suggestive for Einstein's concept of time in the theory of relativity than the verses on the relativity of the sun are for the heliocentric comos Copernicus envisioned. Verse 51:47 lends further weight to Einstein's theory. The verse ascribes to the cosmos a state of expansion with the root for the Arabic verb being وسع, the root commonly used to describe the width of a plane. It is a widely supported claim in the general theory of relativity that the observed differences in the increased distances of one galaxy from another in the red spectrum of their spectrum corroborates Einstein's physics. What is even more fascinating is that Muhammad's verse (32:5; 22:47) equating a day's travel to a thousand years is calculated by way of the moon to equal the speed of light. If time is calculated by an equivalent to the speed of light in an expanding universe, as Muhmmad claims, these Quranic verses in particular and the Quran in general are more suggestive of Einstein than Copernicus.

of its emphasis on clusters of commonly used Russian phrases, common expressions and idioms. Published initially in 1948 after the beginning of the Cold War, the textbook has been widely used throughout the anglophone world such as at the United States Armed Forces Institute to teach students how to master Russian grammar rapidly. It contains thirty lessons with exercises; the book contains a detached key for checking those exercises. It is an especially Russian textbook with a deep understanding of Russian culture, speech, and mentality. While the authors do not count the number of vocabulary words in the text, the vocabulary is sufficient to provide a student language learner with enough to begin reading. It also contains one of the easiest ways to learn the Russian case system: prepositional phrases. Essentials of Russian is full of prepositional phrases. Since Russian syntax is based largely on its case system, memorization of prepositional phrases eliminates the prerequisite knowledge for constructing dependent clauses. These come for free with the case system you learn from memorizing prepositional phrases.

A single criticism of the book is its inculcation of the belief in the transformation of a root in the imperfect to the perfect, as though one led to the other; the most that anyone can say about the relation of a root's meaning in one aspect to another is that they are related. Although an extremely useful fiction (one can speak as though the perfect for a root in the imperfect is a future tense or past tense), the reality is that most roots receive a preposition in the perfect (i.e., печатать vs. напечатать). This preposition changes the meaning of the root slightly. It is a highly advanced topic full of subtleties that even Russians may try to dispute but an acute eye for detail cannot miss. Language is all about subtleties. Russian is no exception but there is way to master these subtleties.

The second textbook is a modern textbook. It is called Russian Course. Published by the New Penguin Press, Nicholas J. Brown's text is formatted in nearly the same way as Essentials of Russian but is updated with the new way of speaking in Russia. It is an important textbook for understanding how Russian has evolved from the Soviet-style taught in the first textbook to the modern day style of the post-90s, even though it is mostly review. It too suffers from the same emphasis on the useful fiction of symmetric aspects for identical roots.

In both textbooks, you must pay special attention to the subtle concept of "verbs of motion," since these Russian verbs of motion are peculiar and unique and do not exist in other languages and form a coherent system, a pillar of the Russian mentality. In Essentials of Russian, the verbs of motion are covered in lessons five and eight (i.e., pp. 46—47; pg. 69); in Russian Course, Brown dedicates a single chapter to verbs of motion in lesson 20 (i.e., pg. 240).

Published by the Russian Language press, the next textbook is a called Russian in Exercises. The most advanced students, who have assimilated the basic grammar (i.e., declensions, conjugations, or dependent clauses), can race ahead to the chapter on Verbs of Motion (i.e., pp. 163–191) to practice, drilling the concept of Russian verbs of motion. Since the Russian verbs of motion focus on both aspect and prefixes, a student who knows his or her verbs of motion knows aspect and prefixes pretty well. Since Russians speak about motion more than anything else, the verbs of motion form a paragon in the Russian mind for understanding non-motion verbs by reference, analogy, or direct application. Hence a knowledge of verbs of motion also allows you to develop a strong understanding of the Russian aspectual mentality. Another way (which is for the especially advanced student) is to study Russian where the meaning of a root undergoes radical changes with every new preposition. Non-advanced students likely won't be able to understand this process.

With these three textbooks out of the way, an advanced student should proceed to round out his or her knowledge of Russian grammar with expertise. Townsend's Continuing Russian is just such the textbook. The reason why Townsend's textbook supersedes all others is for his belief in the nonexistence of a "perfective verb corresponding exactly in meaning… to an imperfective verb." (pg. 39) You can read hundreds of Russian textbooks. If the author does not make just such an admission, he or she does not know Russian. English speakers whose only sense of a future tense comes from an auxiliary verb have to overcome its lack in the Russian language or else they shall never understand the subtleties of the Russian aspectual mentality. Another reason for Townsend's textbook is his emphasis on a verb's case. A Russian verb takes a case. It is common for textbooks to teach verbs without cases but these textbooks are to be avoided, since a new verb without its case reflects an ignorance of the Russian language. A verb must be learned with its case.

The sixth book is The Big Silver Book of Russian Verbs. There are only 550 verbs, a little more than ten percent of the total number of 5,000 words, in this book. This book is a good book because every single verb is described with its case! Conjugating these 550 verbs with case in mind, you will develop the necessary skills for being able to read in Russian, even though the author is guilty of the belief in symmetric aspects for identical roots. The seventh book, Roots of the Russian Language, is designed to further emphasize the schematics of the verb from Townsend's textbook with a review of Slavic roots. These roots turn up frequently and a knowledge of these roots helps unlock more meaning from Russian words. It also serves the most advanced student well. An advanced student can transfer knowledge of these roots to the study of other Slavic languages (i.e., Ukrainian, Polish, Bulgarian, Bosnian, Serbian, and Croatian, etc…)

The Soviet Russian Language press specialized in producing Russian texts annotated with commentary in English. No subsequent press in Russia has ever accomplished what the Russian Language press accomplished. There is probably no other press in the world that has. The Russian Language press' textbooks are primarily reproductions. Of the best reproductions, Chekov's and Gogol's short stories stand out.

The eighth book is thus Chekov's *«Юмористические Рассказы»* with explanatory notes and vocabulary. The book contains 16 short stories, not a single one of which should be difficult to read after having studied Russian with the previous seven books. The ninth book is Gogol's *«Шинель»*. It contains the vocabulary necessary for preparing you to read a novel.

Alongside these textbooks and books, you should be learning or should have already learnt how to write in cursive, since Russians write in cursive. The cursive script can be learned easily from *«Учусь писать по-русски»*. It is your tenth book. It is another book produced by the Russian Language press.

After reading two or three of these specialized Russian language learning texts from the Soviet Union's Russian Language press, you are ready to begin reading a Russian novel. The most common choice is Tolstoy's War and Peace. Others chose Dostoyevsky's Brothers Karamazov. Some chose modern novels. A few chose dramas like Griboyedov's *«Горе от Ума»*. It generally does not matter much which author. What matters is that you are able to finish the book from cover to cover.

You should not stop to look up

words. You should continue reading, even if you do not understand a word. You can write the word down to look up later. If you encounter words whose meaning you cannot uncover from the *«Краткий Толковый Словарь Русского Языка»*, then you are excelling beyond the 5,000 words. This is a good sign.

With these 5,000 words internalized for passive recognition, learned, or committed to active memory, an aspiring specialist who wants to master Russian on a level equivalent to the ordinary Russian, must chart the course on the "culture of language" the leader of the Russian revolution invoked after the he successfully led the October revolution in 1917. Lenin, the leader of the Russian revolution, not only called on Russians to study Russian but for Russians to produce a Russian dictionary.[367] Д. Н. Ушаков, a professor from the Moscow University, became one of the first to heed Lenin's call. In 1935 he became the first Russian to produce a *Толкового словаря русского языка*.[368] Within less than 5 years, he produced the fourth and final edition.

Ушаков's dictionary, which contains many more words than the «*Краткий Толковый Словарь Русского Языка*» preceded the Russian Language press, laid the foundation for the much larger but no less significant Russian dictionary, «*Словарь Русского Языка С. И. Ожегова*», the first and only single volume dictionary published during during Soviet Union and before its collapse. By 1987, the dictionary had passed through 18 editions. This dictionary contains exactly 57,000 words.[369] A Russian specialist, who cannot identify, understand, or explain more than three quarters of the words in *Ожегов*'s dictionary has not reached the level of fluency associated with ordinary Russians, as ordinary Russians rely on Ожегов's dictionary to explain unknown words. Russians, the majority of whom were born in the Soviet Union, speak the language both Ушаков and Ожегов addressed in their dictionaries (i.e., the 1940s). This the legacy of speech in contemporary Russian society. While Russian scholars have studied earlier periods and their scholarly works are fairly accessible in Russian society, the vast majority of Russians have not yet had a chance to fully comprehend the gravity of Russian speech from 1917 to the beginning of WWI. This cannot be understated. The Russian language the vast majority of Russians speak is the language from the 1940s.

[369] The larger dictionaries with tens of thousands of more words than Ушаков's or Ожегов's dictionaries present largely non-Russian neologisms. An example from the «*Словарь русского языка*» is *ажур*, which appears in neither Ушаков's nor Ожегов's dictionaries. Derived from French "à jour," the French neologism is a highly idiosyncratic Russian word whose commonality to ordinary Russian speech is almost never. Issued in 1960 and 1984, the «*Словарь русского языка*» may be a great book to shelf but is certainly not a measure for fluency. The later editions for these dictionaries contain a slew of English words, none of which are unfamiliar to an European or the Anglophone readership. In all reality no aspiring Russian language learner who clings to his or her «*Краткий Толковый Словарь Русского Языка*» is unlikely to be lost.

In fewer than these ten books and textbooks you can learn how to speak Russian fluently. Your mastery of Russian vocabulary (i.e., 5,000 or more words), Russian grammar (i.e., declensions, conjugations, or dependent clauses), or Russian verbs empowers you with the ability to understand everyday Russian phrases, common expressions or idioms but great Russian authors like Gogol or Chekov, two masters of the contemporary Russian language. This is the basis fluency in Russian.

Other noteworthy sources of Russian reading texts are Harrap's bilingual series. Published primarily during World War II, these texts are focused exclusively on Russian literature without reference to the 20th century Russian politics Great Britain's leaders considered to be a threat to the 'civilized world.' Emphasis is marked on each word to help early readers articulate Russian words correctly. It is unclear whether these texts might have later influenced the Russian scholars producing dual language texts at the Russian Language press called *Русский Язык* but these texts are generally superior to Harrap's by virtue of their explanations in simple Russian of vocabulary words.[370]

rules based order () • Described as an "illusion" in the American and Western press,[371] the "rules-based order," so-called for the alleged rules the U.S. enforced upon the community receptive of its currency collapsed during the Ukraine war primarily after the battle of Bakhmut-Artemovsk. Article after article printed in the Wall Street Journal and New York Times lamented the lost powers the U.S. could no longer assert by land,

The fact that multiple reports (i.e., ["U.S.-China Strategic Competition in South and East sea, or air.[372]

Although opposed nominally, publicly, or outwardly to the idea of a "liberal international" order based on laws, sources of traditionally conservative news in the United States bemoaned quite rightly the lost order as an "illusion." It was first and foremost an illusion to think that there existed an international whose order derived primarily liberty from liberty than might, such as described in detail as the four horsemen of superpower. Just as America's standing in the saddles of the four horsemen, military (i.e., "unmatched global reach"), economy (i.e., "the main locomotive of global growth"), technology (i.e., "overall leading edge in areas of innovation"), or culture ("unrivaled appeal among the world's youth"), began to rumble, so America's standing throughout the world began to fall off in several important respects. The so-called "comprehensive global superpower" composed of the "combination of all four" horsemen, ships, locomotives, or engines of American superpower began to spit, spatter, or stop, shattering the illusion into thousands of peices 87 competing forms of nation and state scrambled to pick up in a hurried rush from a global stampede.[373]

When Zbigniew Brzeziński published his manual on the preservation of American superpower with its famous "Geostrategic Imperatives," Japan and Germany represented two of the greatest threats to American primacy in pivots about the heartland. Little did he imagine that the greatest threat to America's primacy came not from either one of those countries, let alone any other on the heartland but from within the United States itself. No country but America dislodge its leadership from the four horses of superpower. The gradual decline is the result of societal, political, economic decisions rooted within the materiality of American leadership throughout the five periods of America's superpower. It is not a situation like England, France, or Germany fighting over the Charlemange's legacy for a thousand years to guarantee the best outcome at a new Treaty of Verdun. It is not even clear whether one can attribute the beginning, course, or outcome in the Afghan war, brought about upon false premises, continued to guarantee a wildly unaccoutable defense industrial base extracted monies from the budgets, ended without tangible results of any kind from the first to the last year, falls within the definition of the "purposeful management" of geopolitics. Does the Afghan war even related to "the three grand imperatives of imperial geostrategy" such as "to pre-

China Seas: Background and Issues for Congress," Congressional Research Service. February 8th, 2023]), numerous pieces of legislation such as ["U.S. Commercial Shipbuilding in a Global Context," Library of Congress. IF12534; November 15th, 2023] are repeatedly legislated either through a Congressional vote or Executive Orders (i.e., ["RESTORING AMERICA'S MARITIME DOMINANCE," White House. Executive Order. April 9th, 2025]) demonstrates how America is spinning wheels. The April 9th, 2025 EO, for instance, requires the submission of a Maritime Action Plan (MAP) within 210 days, indicating that at the time Donald J Trump signed the order, the order did nothing to effectuate the previous legislation, literally spinning the wheel in place. Anyone who reads the EO cannot but be stunned. The number of existing regulations, laws, or acts is so numerous that the EO requires an established expertise in the legalities of maritime American law to understand the convoluted legislation. The wheels continue to spin with [" H.R.3151 - SHIPS for America Act of 2025," Library of Congress. May 1st, 2025] Butressing the wheels spinning in place is a steady stream of articles with "speculative backcasting scenarios" predicting sinking American aircraft carriers (i.e., ["How the United States Lost the Naval War of 2015," Foreign Policy Research Institute. 2009]) or America's complete loss of control over either shore in the more than 2.5 trillion dollar trade route (i.e., ["How Beijing might rule the South China Sea within a decade," Chatham House. September 15th, 2025]) through the Tainwan Straits in the South China Sea. None of these articles discuss the fact that China derives the least utility for its growing power on the high seas from the deployment of the Chinese navy in the South China Seas.

[373] See [Brzeziński, Zbigniew The Grand Chessboard. New York: Basic Books, (1997), pg. 24]

vent collusion and maintain security dependence among the vassals," "to keep tributaries pliant and protected" or "to keep the barbarians from coming together." It does not appear as though any of these three "grand imperatives" figured prominently or even lightly into the political calculus for the Afghanistan war. .[374]What were these people thinking?

Brzeziński's problem, however, quickly became America's problem. With his heavy emphasis on space with almost no mention of time, Brzeziński discusses geography, territory, or waterways but he has nothing to say about timing. Brzeziński, for instance, adds no limits to the idea of power spread over vast swaths of earth; in his calculus, he figures no seconds, minutes, hours, days, months, or years over the cost required to maintain, extend, or expand a powerful spread. An order, international or liberal, is for a specific period of time with specific conditions, whose effect or expiration, is at the hands of the enforcer. In politics the differential or integral calculus is much alive as in the field of mathematics. The vanishing point at which the areas of a squared curve become so miniscule as to be negligible in the world's largest maneuver space is at a specific point in time. No less so for politics are the maneuvers for capturing, securing, or exploiting territory, enforcing, or punishing those who transgresses the order. Brzeziński's transgression is thus his complete lack of a vanishing point in the application of his differential or integral political spatiality. A horse, no less so than a man, may not ride forver; four horses the less so still. Heraclitus hounds him to the grave.

Rockwell Kent () •

Rogovin, Vadim () • A brilliant Russian historian, Vadim Rogovin, who mysteriously died from cancer shortly after Putin's ascent to power, published a seven volume set in Russian on the inner-party struggle from the Russian revolution to the beginning of World War II. A scholar within the Russian canon on a par in every way with the famed Kliuchevskii, Rogovin's timeless classic, superb, unparalleled analysis of the innerparty struggle depicts-with remarkable clarity and political insight-one of the greatest tragedies in the history of mankind, the political genocide of the October generation of Russian revolutionaries, a social, political, historical event without equal in the history of the class struggle.

In the back of his sixth book, Мировая Революция и Мировая Война (Москва:1998), Rogovin provides a summary of his series. The series is called «Была ли Алтернатива Сталинизму?». These are listed with descriptions there as follows:

Том I. «Была ли Альтерантива? "Троцкизм": Взгляд через годы» М., 1992: "В книге впервые в отечественной литературе досконально представлена одна из наиболее драматических страниц истории большевистской партииожесточенная внутрипартийная борьба 1922-1927 годов, ход и смысл которой грубо фальсифицировались в годы сталинизма и застоя. Анализируя многочисленные документы, автор опровергает исторические мифы прошлого и настоящего, тщательно прослеживает ход этой борьбы, раскрывает содержание идейно-политической альтернативы сталинизму, выдвигающейся левой оппозиции. В книге предпринята попытка раскрыть

[374] See [Brzeziński, Zbigniew The Grand Chessboard. New York: Basic Books, (1997), pg. 40]

механизм возникновения тоталитарного режима в СССР, показать истоки трагедии большевистской партии, а вместе с ней- и всей страны.”

Том II. «Власть и Оппозиции"» М., 1993: ”В книге показана картина непримиримой борьбы между сталинизмом и противостоявщими ему легальными п нелегальными оппозиционными группировками в ВКП(б) на протяженнии одного из самых сложных и трагических периодов нашей истории (1928-1933 годы). Автор доказывает несостоятельность широко распространенных мифов об органической преемственности ленинизма и сталинизма о "монолитном единстве" большевистской партии. Раскрывается содержание критики, которой коммунистические оппозиции подвергали насильственную коллективизацию и раскулачивание, сталинские методы индустрализации, бюрократическое планирование, социальные привилегии, тоталитарный политический режим. Освешается альтернативная политеческая стратегия социалистического строительства, выдвигавшаяся левой оппозицией во главе с Л. Д. Троцким. Показаны причины поражения оппозиционных движений и утверждения бюрократического абсолютизма в СССР и международном коммунистическом движении.”

Том III. «Сталинский Неонэп» М., 1995: ”Каковы основные причины сталинского террора? Ответу на этот вопрос до сих пор вызывает споры историков, политологов, и публицистов, посвящена эта книга. Основываясь на недостуных до недавнего времени документах, свидетельствах очевидцев и участников трагических событий тех лет, автор опровергает суждения по этому поводу как сталинистов, так современных "демократов". Он разрушает широко распространенные в последные годы стереотипные представление о тождестве или близости идеологии и практики большевизма и сталинизма. В книге доказывается: "великая чистка" представляла собой реакцию на рост оппозиционных сил и настроений как внутри партии и страны, так и в международном коммунистическом движении. Почему период 1934-1936 годов можно называть "сталинский неонэп"? Какова была политическая программа, выдвигаемая большевистской оппозицией в эти годы? В чем сущность и различия между сталинизмом и фашизмом? Существовала ли в 30-е годы возможность международной социалистической революции и почему она не произошла? На эти и многие другие вопросы читатель найдет ответы в этой книге, дающей богатый материал для размышлений над судьбами коммунистической идеологии и коммунистического движения.”

Том VI. «1937» М., 1996: ”Тридцать седьмой год, большой террор, великая чистка, ежовщина - за этими словами встают, быть может, самые трагические страницы мировой истории. Несмотря на всевозрастающий поток публикаций по этой теме, многое из событий того времени остается загадочным и непонятным. Опираясь на исследования отечественных и зарубежных историков, многочисленные литературные источники, документы, хранявщиеся в российских и американский архивах, автор совершенно по-новому раскрывает причины и механизм великой чистки. В книгу впервые проанализированы материалы декабьского (1936 г.), февральско-мартовского и июньского (1937 г.) пленумов ЦК ВКП(б). Чем обьяснялись "признания" подсудимых на политических процессах? Каковы были политические силы в СССР и за рубежом, страх перед которыми побудил Сталина развязать

самый масштабный в истории государственный террор?The Federal Bureau of Investigation together with the rest of the superfulous Federal agencies designed to suck blood out of the American working class like a parasite out of a host have continued Stalin's terror, persecuting Trotskyites in the greatest conspiracy against the working class of the 21st century. The imposition of a final solution by these Constitutionally baseless, parasitic, anti-Communist agencies to guarantee that no individual emerge within the working class to lead its struggle is a Stalinist liquidation. Workers must make every effort to annihilate the anti-working class agencies the corrupt, anti-Constitutional, illegal police State apparatus has been erected to subjugate into oblivion. Not a single Federal agency, domestic or foreign, is worth the spit that comes out of the mouthes of its greatest pygmies, lilliputans, or dwarfs. The sum total of America's agencies has been a systematic destruction of America, America's Constitution and America's system of governance. Существовал ли военно-политический заговор против сталинской клики? На этой и многие другие вопросы читатель найдет ответ в этой книге."

Том V. «Партия Расстрелянных» М., 1997: "Партией расстрелянных после второй мировой войны называли Французского коммунистическую партию, выступавщую главной силой антифашистского сопротивления и ставшую основным объектом гитлеровского террора. С неменьшим основанием эти слова могут быть применимы к большевистской партии, почты целиком истребланной в великой чистке 1936-1938 годов. В книге освешаются важнейшие политические события в СССР, начиная с июньского пленума ЦК ВКП(б) 1937 года, на котором было подавлено сопротивление внутри Центрального Комитета сталинскому террору, и до снятия Ежова с поста народного комиссара внутренных дел. Раскрывается деятельност Л. Д. Троцкого, большевиков-" невозвращенцев и прогрессивной мировой общественности по разоблачению сталинских преступлений. Описываются преступные действия сталинской агентуры за рубежом. Все ли признания подсудимых на открытых процессах были вымышленными? Существовало ли в 30-х годах сопротивление сталинизму в СССР и в мировом коммунистическом движении? Какая часть совестского общеста представляла социальную базу великой чистки? На эти и многие другие вопросы читатель найдет ответ к книге."

Том VI. «Мировая Революция и Мировая Война» М., 1998: "Первая часть предлагаемой читателю книги посвящена анализу состояния советского общества, в таком оно оказалось непосредственно после великой чистки 1936-1938 годов. Автор различает бюрократически-тоталитарные деформации, внесенные сталинизмом в экономическую, социальную, политическую, духовную жизнь общества, и завоенания Октябрьской революции, которые сохранились в СССР и определили его будущую победу в Отечественной войне. В второй части книгу рассматриваются события, связанные с подготовкой и подписанием советско-германского пакта 23 августа 1939 года. Используя и тщательно сопоставляя советские и зарубежные источники дипломатической истории 30-х годов, автор доказывает, что заключение этого пакта явилось преступным верхушечным сговором двух диктаторов, тяжелым ударом по делу мировой социалистической революции, непосредственной причиной возникновения второй мировой войны. В третьей части показывается, что, несмотря на уничто-

жение тысяч сторонников Троцкого в СССР и за рубежом, в конце 30-х годов продолжало активно развиваться троцкистское движение, неумолчно звучал на весь мир голос Троцкого, разоблачавшего все новые и новые сталинские преступления. В этих условиях единственно доступным для Сталина методом подавления идейного и политического влияния IV Интернацоинала могло явится только убийство Троцкого. На основе недавно опубликованных архивных материалов и мемуарных свидетельств освещаются первые этапы подготовки этого злодеяния."

Том VI. «Конец Означает Начало» М., 1998: "В книге. I. СССР перед большой войной. II. Мир в войне. III. Убийство Троцкого."

A comparison of Trotsky's discussion in his book, New Course, about degeneration with that from Revolution Betrayed reveals the degree to which Trotsky himself refused to take responsibility for the suppression of internal dissent within the Bolshevik party in the early years. It cannot be that Stalin's obliteration of subsequent groups of opposition did not have any relation whatsoever with the suppression of internal dissent within the Bolshevik party or the nascent Soviet Union. Rogovin's refusal to link Stalin's obliteration of internal dissent to Trotsky's suppression of internal dissent is a major shortcoming of Rogovin's seven volumes. It is simply incomprehensible that neither the Merzniyak nor the Workers' Opposition figure into Rogovin's calculus on internal dissent in the Bolshevik party or the nascent Soviet Union. [TO DO]

S

Sanctions (Sanct · ions) Noun •

Sanctions, imposed on Russia after Russia launched its full-scale invasion of the Ukraine on February 24th, 2022, failed to produce the effect the U.S.-led NATO alliance sought. In the immediate aftermath of its imposition of sanctions, hundreds of thousands of Western businesses profiting from Russia's domestic market withdrew, causing billions of dollars in losses. Russia continued to sell oil. At the time, the price of oil skyrocketed. Russia earned no fewer than 93 billion Euros from profits on oil exports alone.[375]

Sappho () • Sappho, the greatest lesbian in the history of the Western world, is an Ancient Greek poet, writing in the Lesbian vernacular of the Aeolic dialect.

Saylor, Michael () • Michael Saylor is like Sam Bankfriedman. Just as Sam Bankfriedman served the Democrats, so Michael Saylor has served the Republicans. The function for both has been to transfer wealth from unsuspecting citizens to valueless Bitcoin so that the companies these individuals led can make money for members of one or the other party.

777 Partners () • 777 Partners' unwinding, which began in the UK with its subsidiary entity having declared bankruptcy in the High Court on October 8, 2024 (whose second anniversary coincides with the Fourth

---

[375] ["סנקציות? רוסיה מכרה מאז הפלישה לאוקראינה נפט בשווי 93 מיליארד יורו. רק גרמניה קנתה נפט רוסי ב-12 מיליארד יורו."]

[376] The article that initiated 777 Partners' downfall came from Semafor. On November 30, 2023, Semafor published a report detailing that the Justice Department was investigating 777 Partners, a sports investment firm, over its money flows for potentially violating laws related to money-laundering. The article is suspicious, however, for money-laundering the modus operandi of the police State bureaucracy, of which the Department of Justice is the primary instrument. Court cases, like those Jack Smith filed against Trump, are largely orchestrated so that law firms, which

Anniversary of the Ukrainian war), has caused a multi-jurisdictional collapse with the specter of contagion.[376] 777 Partners' affiliated debtor, Signal National LLC, filed its petition in the U.S. Bankruptcy Court for the Northern District of Texas on August 9th, 2026 (during the Fourth Anniversary of the Ukraine war), with the Court ordering the joint administration of 23 affiliated cases the following day. Covered almost exclusively by Bloomberg, the Financial Times has been suspiciously silent on the case surrounding Josh Wander, against whom the U.S. Department of Justice filed an indictment with charges related to fraud. Neither the New York Times nor the Wall Street Journal, which acts as a mouthpiece for Republican propaganda, picked up the Wander case alongside the Republican propaganda campaign to root out fraud that numerous Republicans trumpeted on social media during September's end. 777 Partners, one of the largest structured-settlement buyers in the country, expanded in accordance with the speculative boom Quantitative Easing during Covid-19 caused into multiple industries. The collapse, whose effect on multiple companies continues to ripple throughout the economy, is one of the first major companies to fall during the fifth American period of its greatest descent in global superpower. It represents a major source of contagion, as companies associated with 777 Partners continue to default on loans. 777 Partners' collapse foreshadows the inevitable outcome private credit cultivated for itself in pursuit of the expansion of monetary credit in the aftermath of both the 2008 Great Financial Crisis and Covid-19.

Rabbi Schapiro () • Rabbi Schapiro's contribution to an understanding of the founding Zionists such as Jabotinsky is unparalleled. His 1394 page book, The Empty Wagon: Zionism's Journey from Identity Crisis to Identity, a monumental study, the likes of which induce readers to compare leading Zionists like Jabotinsky to practical Nietzschean political activists with the will to power a reevaluation of Jewish morals, is set to mark a major point of departure in the study of Zionism, if not the early politics of Jews, many of whom repudiated Marxism for various forms of nationalism.

If Lenin claimed the ”course of events compels the revolution “to concentrate all its forces of destruction” against the state power, and to set itself the aim, not of improving the state machine, but of smashing and destroying it,” then Schapiro's 14 hundred page tractus set itself the aim, not of improving the Zionist state machine but of smashing and destroying it. It is likely that far more parallels with Lenin's State and Revolution are to be found in Schapiro's wagon than any cart anti-Zionists might have mobilized.

Schapiro himself is from a generation of Americans whose understanding of America preceded the fifth period of America's steepest descent. He claims ”Stars and Stripes” but America has neither stars nor stripes anymore; there is hardly anything about America now that can be associated with the territorial borders than rugged individualism for the poor in the face of an ever widening inequal socialism for the most exuberant, luxurious, lavish lifestyle of the rich and famous who forsook America's principles a long time ago. In terms of his understanding of America, Schapiro

---

”litigate” these cases, can bill the US government to the high heavens. The orchestrated downfall bears the hallmarks of Heinz and Morse. In 1907, F Augustus Heinze, a Montana copper magnate, and Charles W. Morse, known as the ”Ice King,” colluded to speculatively lead United Copper into a short squeeze after pooling resources from extensive banking interests. The scheme, however, backfired. Wander's 777 Partners might just be a Heinze and Morse conspiracy for private credit but with the full complicity of the DoJ, the entirety of whose modus operandi relies exclusively on money laundering for ”orchestrated” cases.

has not worked out the development of American identity against America's steepest descent in the fifth period of its decline. Schapiro's 14 hundred page book deserves the widest possible readership.

שער למתחיל () • One of the illustrious publications in the history of the State of Israel, שער למתחיל is a Hebrew weekly with the vocalizations fully marked in the ניקוד so that early Hebrew language learners, who might know the alphabet or many words from Hebrew, can not only practice pronunciation but reinforce known words. While the newspaper passed through several editions, the newspaper vanished almost without a trace during the Netanyahu administration. Details regarding the illustrious publication are as follows:

Scarborough Shoal () • On April 10, 2012, the People's Liberation Army in China ordered two Chinese law-enforcement cutters on joint patrol in the South China Sea to proceed immediately to Scarborough Shoal, a disputed cluster of rocks approximately 140 nautical miles west of Subic Bay, the Philippines. Earlier that day, a Chinese fisherman aboard one of several boats moored in the Shoal's lagoon had transmitted alarming messages to authorities at the home port in Hainan. One of these messages read: "Philippine Navy ship number 15 heading this way."

Ship number 15 BRP Gregorio del Pilar, a retired former U.S. Coast Guard (USCG) cutter transformed into a frigate for the Philippine navy, began to take control over the moored ships. Only a short period after the first alarm reached Hainan, Philippine sailors operating from the ship entered the lagoon, approaching the Chinese boats. The fisherman, who sent the first message, dispatched his last: " They're boarding."

Schiff, Irwin () • A critic of America's Federal tax system, Irwin Schiff (February 23, 1928 – October 16, 2015), whom the government illegal persecuted for protected speech, published a series of groundbreaking analyses, demonstrating how America's tax system, which the fanatical private central bankers such as Woodrow Wilson or his pedigree erected underneath the US Federal Reserve, is not only illegal but a cudgel a Federal mafia wields to beat citizens into submission. In his book, The Federal Mafia (1980), the subsequent editions of which perfected the original at first in 1992, 1999 until finally in 2020, Schiff presented his thesis.

The crime Schiff committed is a crime against his own ruling elite. Schiff made public the private playbook America's ruling elite consistently exploit by reference to "third parties" (i.e., such as lawyers specialized in tax, taxation, or tax law) in its ordinary modus operandi. None of America's corporations, such as Amazon or Tesla[377], pay taxes as they should. They're all engaged in applying the principles laid out in Schiff's book for tax evasion, non-payment of taxes, or fraudulent refunds (i.e., such as Trump's[378] lavish refunds). The ability to game, undermine, or compel the American tax system to work for the rich rather than supply the Federal government with a reasonable sum of money necessary for its functionality is akin to the extraordinary, consistent, repeated insistence on budget shortfalls in local, State or Federal governments to such an extent that the tendency in America towards insolvency greatly outweighs the limited, exceptional, rare examples of fiscally sound budgets or budgeting.

---

[377] In 2007, Jeff Bezos, then a multibillionaire and now the world's richest man, did not pay a penny in federal income taxes. He achieved the feat again in 2011. In 2018, Tesla founder Elon Musk, the second-richest person in the world, also paid no federal income taxes, even though his entrepreneurship is based almost exclusively on the Federal government's preference for Musk and its unbridled financial support for his projects in the form of grants, subsidies, or loans.["The Secret IRS Files: Trove of Never-Before-Seen Records Reveal How the Wealthiest Avoid Income Tax," ProPublica. June 8th, 2021]

[378] ["Trump Engaged in Suspect Tax Schemes as He Reaped Riches From His Father," New York Times. October 2nd, 2018], ["Long-Concealed Records Show Trump's Chronic Losses and Years of Tax Avoidance," New York Times. September 27th, 2020]

Schiff's book is the tax lawyer's bible. It is not a crime to hoodwink the Federal tax system, as America's leading corporations (i.e., Amazon, Telsa, etc...), America's leaders (i.e., Donald Trump), or leading business leaders (i.e., Jeff Bezos, Elon Musk, Warren Buffet, etc) do with impunity. Schiff's crime, as the 9th Circuit Court of Appeals (i.e., a kangaroo court) states, is that he "promote[d] abusive tax schemes including Schiff's "zero income" tax return scam, which incites and assists customers to file false federal income tax returns claiming they received zero income and owe zero taxes. [Schiff] promote[d] their schemes through seminars, radio shows, and advertisements, and charge customers for products and services related to their abusive tax schemes." It was that Schiff " popularized" the modern American tax lawyer's playbook, allowing members of the public to become privvy to these schemes by interferring " with the administration of the internal revenue laws by appearing with customers at IRS appeals hearings and encouraging their customers to raise frivolous arguments, by inciting and assisting customers to file frivolous lawsuits and Tax Court petitions and by inciting and assisting customers to send frivolous correspondence and other documents to the IRS," that is, by popularizing the methods America's corporations exploit on a daily, monthly, quarterly or yearly basis to game, undermine, or compel the American tax system to work for

---

[379] The news agency, ProPublica, exposed the scheme to "buy, borrow, die" in a series of articles that exposes Schiff's alleged crime as nothing more popularization of an otherwise secret modus operandi among the rich. They are as follows: ["How Billionaires Have Sidestepped a Tax Aimed at the Rich," December 18th, 2024], ["How a Decades-Old Loophole Let Billionaires Avoid Medicare Taxes," December 11th, 2024], ["IRS Audit of Trump Could Cost Former President More than 100 Million," May 11th, 2024], ["A Top Mutual Fund Executive Made Millions for Himself Trading the Same Stocks His Giant Fund Was Trading," November 21st, 2023], ["How Warren Buffet Privately Traded in Stocks That Berkshire Hathaway Was Buying and Selling," November 9th, 2023], ["How the Ultrawealthy Use Private Foundations to Bank Millions in Tax Deductions While Giving the Public Little in Return," July 26th, 2023], ["The Biotech Edge: How Executives and Well-Connected Investors Make Exquisitely Timed Trades in Health Care Stocks," June 22nd, 2023], ["IRS Strategic Plan Vows to Amp Up Audits of the Rich," April 7th, 2023], ["Private Planes and Luxury Yachts Aren't Just Toys for the Ultrawealthy. They're Also Huge Tax Breaks." April 5th, 2023], ["Wealth Executives Make Millions Trading Competitors' Stock With Remarkable Timing," March 16th, 2023], ["That Cardboard Box in Your Home Is Fueling Election Denial," October 26th, 2022], ["Ken Griffin Spent 54 Million Fighting a Tax Increase for the Rich. Secret IRS Data Shows It Paid Off for Him," July 7th, 2022], ["Ten Ways Billionaires Avoid Taxes on an Epic Scale," June 24th, 2022], ["How Susquehanna's Jeff Yass Avoided 1 Billion in Taxes," June 23rd, 2022], ["Meet the Billionaire and Rising GOP Mega-Donor Who's Gaming the Tax System," June 21st, 2022], ["If You're Getting a W-2, You're a Sucker," April 15th, 2022], ["America's Top 15 Earners and What They Reveal About the U.S. Tax System," April 13th, 2022], ["America's Highest Earners and Their Taxes Revealed," April 13th, 2022], [" Taking Aim at Billionaire Tax Avoiders, Biden Proposes Minimum Tax for Ultrarich," March 28th, 2022], ["When Billionaires Don't Pay Taxes, People "Lose Faith in Democracy," February 28th, 2022], ["'The Secret IRS Files' Wins Selden Ring Award for Investigative Reporting," February 7th, 2022], ["The Great Inheritors: How Three Families Shielded Their Fortunes from Taxes for Generations," December 15th, 2021], ["A Massive Oil Spill Helped One Billionaire Avoid Paying Income Tax for 14 Years," December 9th, 2021], ["When You're a Billionaire, Your Hobbies Can Slash Your Tax Bill," December 8th, 2021], ["These Real Estate and Oil Tycoons Avoided Paying Taxes for Years," December 7th, 2021], ["How These Ultrawealthy Politicians Avoided Paying Taxes," November 4th, 2021], ["These Billionaires Received Taxpayer-Funded Stimulus Checks During the Pandemic," November 3rd, 2021], ["The Billionaires Tax Isn't New," October 29th, 2021], ["Proposal to Rein in Mega IRAs Faces Lobbying Resistance From Retirement Industry," October 25th, 2021], ["ProPublica Wins Gold and Bronze Barlett and Steele Award," October 19th, 2021], ["More than Half of America's 100 Richest People Exploit Special Trusts to Avoid Estate Taxes," September 28th, 2021], ["How the Trump Tax Law Created a Loophole That Lets Top Executives Net Millions by Slashing Their Own Salaries," August 19th, 2021], ["Secret IRS Files Reveal How Much the Ultrawealthy Gained by Shaping Trump's "Big, Beautiful Tax Cut,"

America's ruling elite (i.e., to buy, borrow, die[379]) rather than allowing the US Federal Reserve to perpetuate the extraction of surplus value from workers through the imposition of illegal income tax or orchestrated inflation.[380] The 9th Circuit Court of Appeals (i.e., a kangaroo Court) banned Schiff's book from sale.[381] "Judge Procter Hug Jr. held that the book qualified as commercial speech, which is afforded fewer constitutional protections than expressive speech, because Schiff makes claims that are "designed to convince readers that they can lawfully avoid paying their income taxes so that the reader will buy other products in Schiff's line." The government selectively bans or regulates "commercial speech" if the speech is misleading or related to unlawful activity, even though the vast majroity of marketing major American corporations (i.e., such as food or nicotine companies like cigarette companies) utilize commercial speech to sell carcinogenic food or encourage vaping or cigarette smoking consistently or regularly with impunity.

In an article under the title " Libertarian tax protester Irwin Schiff dies in prison," the Libertarian quoted Irwin's Schiff's son, Peter Schiff, as describing how the Federal government, which has destroyed America, murdered his father.

"My father was serving a fourteen-year sentence that he began serving ten years ago, at the age of 77. That sentence turned into a life sentence, as my father failed to survive until his planned 2017 release date. However in actuality the life sentence amounted to a death sentence. My father died from skin cancer that went undiagnosed and untreated while he was in federal custody. The skin cancer then led to a virulent outbreak of lung cancer that took his life just more than two months after his initial diagnosis.

"The unnecessarily cruel twist in his final years occurred seven years ago when he reached his 80th birthday. At that point the government moved him from an extremely low security federal prison camp in New York State where he was within easy driving distance from family and friends, to a federal correctional institute, first in Indiana and then in Texas. This was done specially to give him access to better medical care. The trade off was that my father was forced to live isolated from those who loved him. Given that visiting him required long flights, car rentals, and hotel stays, his visits were few and far between. Yet while at these supposed superior medical facilities, my father received virtually no medical care at all, not even for the cataracts that left him legally blind, until the skin cancer on his head had

[380] See: Case 2:03-cv-00281-LDG-RJJ Document 251 Filed 10/15/2008.

[381] ["Anti-tax author must stop selling book promoting tax evasion." Reporters Committee for Freedom of the Press. August 12th, 2004.] It is likely due to Schiff's contribution to the study of the American tax system that news agencies like ProPublica have been able to publish exposures like "The Secret IRS Files Archives."

spread to just about every organ in his body.

"At the time of his diagnosis in early August of this year, he was given four to six months to live. We tried to get him out of prison on compassionate release so that he could live out the final months of his life with his family, spending some precious moments with the grandchildren he had barely known. But he did not live long enough for the bureaucratic process to be completed. Two months after the process began, despite the combined help of a sitting Democratic U.S. congresswoman and a Republican U.S. senator, his petition was still sitting on someone's desk waiting for yet another signature, even though everyone at the prison actually wanted him released. Even as my father lay dying in intensive care, a phone call came in from a lawyer and the Bureau of Prisons in Washington asking the prison medical representatives for more proof of the serious nature of my father's condition.

"As the cancer consumed him his voice changed, and the prison phone system no longer recognized it, so he could not even talk with family members on the phone during his finale month of life. When his condition deteriorated to the point where he needed to be hospitalized, government employees blindly following orders kept him shackled to his bed. This despite the fact that escape was impossible for an 87 year old terminally ill, legally blind patient who could barely breathe, let alone walk.

"Whether or not you agree with my father's views on the Federal Income Tax, or the manner by which it is collected, it's hard to condone the way he was treated by our government. He held his convictions so sincerely and so passionately that he continued to espouse them until his dying breath. Like William Wallace in the final scene of Braveheart, an oppressive government may have succeeded in killing him, but they did not break his spirit."

Shi Lang () • Qing Admiral Shi Lang's (Chinese:) amphibious conquest of Taiwan in 1683 celebrated its 340th anniversary during the first anniversary of the Ukraine war. Shi Lang's amphibious conquest of Taiwan represented the fourth time a foreign power overthrow native Taiwanese to rule over the island. The Dutch East India company first ruled over Taiwan before the Spanish. A merchant-pirate named Zheng Chenggong (also known as Koxinga) dispelled the Spanish, becoming the third conquerer on the Taiwanese archipelago. Due to his success, Shi Lang[382] became one of the greatest 17th century seamen.[383] Shi Lang's established rule lasted the longest both for those who came before as well as those who came after. Lang's rule lasted from 1683 to 1895 when the Japanese overthrew the Chinese. After Japan defeated China in the first Sino-Japanese War, the Qing dynasty, hallowed, corrupt, bankrupt, ceded Taiwan to the victors via the Treaty of Shimonoseki. Japan brutally suppressed local resistance with rape, murder, or widespread looting. Japan ruled until the Soviet Union seized Manchuria in a lightening Blitzkrieg offensive within eight days in World War II.

---

[382] Shi Lan became a figure whose behavior are analogous to that of Alcibiades, the prominent Athenian general, grand strategist, legendary orator, stateman, who erratically shifted his allegiances, fighting at one time for Athenians, at another Sparta, and for another still Persia. In contrast with Alcibiades, Shi Lang terminated his relations with his initial guarantor (i.e., Koxinga). Shi Lang did not mince words. A hot blooded fellow, Shi frequently burst into fits of rage when those who could benefit most from his intellect refused to concede ignorance. Blunt to the point of rudeness, Lang delivered dry, straightforward, honest advice that undermined people in power whose ass shines from incessant servility.

[383] Although Russian sinology captured a great of information on Chinese naval warfare, no individual study has appeared in Russia. Do the Russians understand the significance of Chinese naval power in the South China Seas?

Shi Lang's amphibious conquest of Taiwan in 1683 represented one of the greatest naval victories in the history of the South China Seas, if the 17th century.

The Chinese memorialized Shi Lang's life in a 37-episode Chinese TV drama under the title, Admiral Shi Lang (also titled The Great General Shi Lang)[384], which Chinese Central Television released on March 27, 2006, the 20th anniversary of which coincides with the fourth anniversary of the Ukraine war. These twenty years equate to the time admiral Shi Lang took from his first failed to last successful attempt to lay siege to Taiwan.

Scrooge McDuck () • In a famous Walt Disney cartoon from March 23, 1967 that Walt Disney released, uncle Scrooge, a cartoon character, teaches his nephew ducklings about a few fundamentals of the economy. In his descriptions of money, Scrooge employs a number of literary devices designed to place the largesse of money into perspective for his little ducklings. (See "Scrooge McDuck and Money" (Luske/Mar. 23). 1967)

In his explanation of a billion, for instance, Scrooge demonstrates how a billion achieves several different types of measurements. In the first example, Scrooge demonstrates how a billion dollars stacked up high is about 800 times the height of the Washington monument. In his second example, Scrooge sings, "A billion dollars on the ground, all stretched out and uncurled, would extend about four times around the circumference of the world." The second example is different in two ways; the bills are laid flat, edge to edge, to form a measure. In the last example, Scrooge applies his measure to time and space. Scrooge walks with a pointed stick, poking dollars on the ground that he collects into a large sack swung over his shoulder while saying, "pick one up each second, day and night without a break, in 32 years you will have them all." The fourth example connects one land mass to another. "A billion dollars six feet wide and arched across the sea" forms "a nice green bridge to the beach at Waikiki." The fourth example, however, makes no reference to the origin of the footbridge so the example is less clear the others but the point is well taken. A billion is a lot of money. At the time of the film, McDuck explained how income tax pays for everything from schools to roads and must be factored in as well. At the time the U.S. Federal debt amounted to 347 billion dollars approximately. In a far cry from the more than 70 years of the intervening period of time, more than 75 per cent of American income tax pays America's Federal debt, which exceeds 40 trillion. Towards the end of the film, McDuck denounces one of the duck's recommendations "to just print up a few billion or so." Startled, McDuck says, "If it weren't so frightening, I'd be amused. Folks have no conception. Unless something is behind it, something solid and secure, then we'd have inflation. That's a mess! Your money would be worth less and less." What would Scrooge have done to demonstrate the difference a billion achieves in measurements over a trillion?

Section 109 () •

In Issue № 1174 from January 17th, 2013, The Rolling Stone, which is full of ads for Showtime (before the rise of online streaming platforms) debuting premiers for shows like Shameless, House of Lies (which ends with a dollar sign instead of the voiceless alveolar fricative in English), or Californication (whose namesake derives from one of the songs the Red Hot Chili Peppers sing),[385]

---

[384] In Chinese, the title reads as follows: . The 37 episode series is available on China's CCTV.

[385] Access to information, especially contained in archives, became extremely hard from the Third to the Fourth Anniversary of the Ukraine war, as the leading global ruling elites began to rewire the undersea cables laid for rapid interconnectivity around the world. A black and white copy of the aforementioned number became easier to access, for instance, than a color copy, which is closer to the original than a black and white copy. Scientists also began to disappear without

Political analysts, who would like to exploit these "disappearances" to raise claims against "patternicity" or the "tendency to find meaningful patterns in 'random noise,'" fail to account for the lack of availability for interviews. Information regarding work these "disappeared" people produced is key to demystifying not only the true nature of their "disappearances" but what is happening around their "disappearances." It is irrelevant whether a pattern emerges or not; the information or access to the information is no longer available. The lack of available information is a theme related not only to rewired undersea cables or the "disappearances" but the aim the global ruling elite seek to brainwash in the minds of working people. The problem is that scientists, who work for the Federal government or the Chinese Communist Party (neither of which are discernible), are required to acquiesce to "disappearances" for the sake of coordinated media campaigns designed to stun, confuse, or bamboozle the population with 'random noise' against "patternicity." The acquiescence itself is extremely problematic, for the pursuit of science ought not to be predicated on compliance with, acquiescence or subordination to the Federal government's or the Chinese Communist Party's need for propaganda. Distractions such as the "disappearance" of scientists are by design focused on shifting attention from real crises such as the death of the collapsing dollar to propaganda whose examination deflects from a deeper understanding of the real crises. If citizens are focused on "disappeared" scientists (whom the FBI has obviously admitted into Witness Protection Programs for a life out of the public sphere with a new identity no one can track down for an interview), then certainly they cannot be focused on writing articles about the "Secrets and Lies of the Bailout." published an article under the title, "The Truth about the Bailout" with a subtitle, stating: "It made things worse — and it's still not over." In the article, the author, Matt Taibbi, produces an analysis of the bailout for the 2008 Great Financial Crisis with a thorough, no holds barred, critical review of its key moments in a detailed chronology with extensive commentary laced with the ordinary language of everyday American slang or profanities. It seems odd that after more than five years from the Great Financial Crisis, an article would appear in The Rolling Stone but inside of the Table of Contents, the article, however, is tells a different story than the conversation. The plot thickens. The original article is renamed with a more controversial title; it becomes "The Secrets of the Bailout" with an even more subtle subtitle, explaining "[how] the

---

explanation. China's and America's decision to disappear scientists, sever Internet cables and Google's decision to restrict public access to cached websites is part of a broad assault on the working class' ability to access, utilize, or analyze information and enhance Consciousness. See ["Renowned scientist who discovered water on distant plant fatally shot." Daily Mail. February 20th, 2026], ["Caltech Astrophysicist fatally shot on porch of his rural SoCal Home," Los Angeles Times. February 20th, 2026], ["Who Is William Neil McCasland? Ex-US General Linked to UFO Research Missing," Newsweek. March 3rd, 2026], ["Missing US General 'Has a Lot of Information' on UFOs: Congressman," Newsweek. March 16th, 2026], ["Chinese Scientists Have Been Dying Mysterious Deaths Too," Chinese Scientists Have Been Dying Mysterious Deaths Too. April 23rd, 2026.] These disappearances (i.e., Frank Maiwald (NASA JPL), Carl Grillmair (NASA JPL), Michael David Hicks (NASA), Monica Jacinto Reza (NASA JPL; AFRIL Wright Patterson AFB), William Neil McCasland (AFRIL Wright Patterson AFB), Melissa Casias (Los Alamos National Lab LANL), Anthony Chavez (Los Alamos National Lab LANL)) have absolutely nothing to do with UFOs, military, defense, space, aerospace, or propulsion. On the contrary, the global ruling elite seek to keep domestic, nationalized, wage-enslaved workers from each population in the absolute dark about the secrets or lies they cultivate to inculcate ignorance, stupidity, or false consciousness, for the simple fact that none of the "disappeared" individuals is available for interview.

federal rescue of Wall Street create a permanent[386] bailout state based on a Ponzi-like scheme." Taibbi compares bankers, whose "own chicanery and greed" thrived off the Ponzi-like scheme, to hillbillies from Oklahoma " who moved in forever, sleeping nine to a bed [before] building a meth lab on the front lawn." (pg. 36)

Taibbi makes a number of uncontroversial claims about the "bailout" US Secretary of The Treasury, Hank Paulson[387] designed to enrich the rich ruling elites with hundreds of billions of US dollars from the Federal debt. The first uncontroversial claim is the following: "It was all a lie—one of the biggest and most elaborate falsehoods ever sold to the American people."

One of the lies Taibbi debunks is the claim that the bailout sought to "save the world from financial catastrophe." (pg. 34) On the contrary, people like Hank Paulson, whose likeness is memorialized with a hand drawn illustrations without AI on the page, exploited the lie to commit "American taxpayers to permanent, blind support of an ungovernable, unregulatable, hyper-concentrated new financial system that exacerbates the greed and inequality that caused the crash, and forces Wall Street banks like Goldman Sachs and Citigroup to increase risk."

Taibbi's claim that "a kind of official feature of the financial rescue" became "the failure to tell the truth to the general populace" is false,[388] since people like Hankson or Barofsky, who played leading roles in the implementation of the bailout, were committee members on the council of rich elites, whose centrally planned resolution never sought to tell the truth about the further enrichment of America's ruling elites at the expense of American taxpayers in the first place.[389] Failure implies intention. These committee members succeeded immensely with the resolution they secretly withheld from the American populace, or else Taibbi's article would hardly have any effect. "It is," says former bailout Inspector General Neil Barofsky, "the ultimate bait-and-switch." (pg. 37)

Taibbi says the lies ranged from "the merely ridiculous" to the "outright deceptive." One of these lies is a continuous lie whose development America's ruling elite developed permanently for TARP (i.e., Troubled Asset Relief Program). Paulson's statement to Congress on September 18th, 2008 is one of those lies. Paulson claimed that 5.5 trillion in wealth would disappear by 2 p.m. that day unless the Federal government provided an immediate approval for his original bailout bill. He made a further lie when he said the world economy would collapse not long thereafter but within 24 hours. A more profound lie became Paulson's Emergency Economic Stabilization Act of 2008. In the bill, which called for 700 billion for troubled mortgages, empowered the US Secretary of the Treasury "to facilitate loan modifications to prevent avoidable foreclosures." The so-called Section 109, however, became jettisoned in lieu of a bailout of filthy rich bankers whose decisions not only led to but compounded the problem Paulson's bill sought to facilitate. A "pudgy, stubby fingered former World Bank economists, who had been forced out as Harvard president for suggesting that women lack a natural aptitude for" (pg. 36) reasoning, Larry Summers, whose seat on the committee members on the council of rich elites is one of the most influential, furthered the lie when he promised the bailout would not enrich "shareholders or executives." Summers continued the lie, describing how the bailouts would be temporary with a "plan for exit of government intervention" implemented "as quickly as possible." Neither the small amount earmarked for "foreclosures" nor the resultant aid programs provided any relief to ordinary, everyday, law-abiding, yay-saying, brainwashed Americans whom the American ruling elite ridiculed for "living outside of their means," which were becoming increasingly meagre from years upon years of falling wages even after the introduction of a double shift.[390]

---

[386] It is curious that Taibbi uses the word permanent, as though to suggest that America's anti-communist Trotskyists might have served as the inspiration for the term, as the word permanent is a heavily charged word. See Day, Richard B., and Daniel Gaido, editors. Witnesses to Permanent Revolution: The Documentary Record. Brill, 2009. Did they?

[387] During the Fourth Anniversary of the Ukraine war, Paulson, whom Taibbi describes as "hulking, shaven, Alien Nation-esque," delivered an interview to Bloomberg on April 17th, 2026, in which he asked pulled the alarm on US Treasuries, explaining how after hitting edging towards the abyss that US trying "to issue [US] Treasuries but the FED is the only buyer with the prices of the [US] Treasuries [falling], while interest rates are up, would be a dangerous thing. To prepare for the eventuality, [the US] needs an emergency break the glass plan, which is 1) targeted, 2) short-term, 3) on the shelf so that the [plan] is ready to go when the [US] hits the wall."

[388] Congress, for instance, never acted but behalf of the banks. Although Rep. David Scott, a Democrat from Georgia, claimed, "We've been lied to," he did nothing to hinder, obstruct, or impede the bailout. Rep. Elijah Cummings, a Democrat from Maryland, expressed gaslit outrage at transparency with which TARP administrator (and Goldman banker) Neel Kashkari, exuded. Although he called him a "chump" for the banks, he did nothing. Anger fumed on both sides of the isle with a complete lack of action. Republican senators David Vitter of Louisiana and James Inhofe of Oklahoma were so upset about the unilateral changes and lack of oversight that they sponsored a bill in January 2009 to cancel the remaining US 350 billion of TARP that they knew would never survive.

[389] A substitution of the word "failure" with "refusal," however, suggests that The Rolling Stone's editors might have butchered Taibbi's original wording, as The Rolling Stone's editors are subject to censorship no less so than the rest of America.

A significant episode of lying in the bailouts occurred around HAMP (i.e., Home Affordable Modification Program). Announced by President Barak Obama on February 18th, 2009, HAMP caused CNBC commentator Rick Santelli "to go berserk" the next day.[391] Santelli publicly denounced "subsidizing the losers' mortgages" but apparently had no problem subsidizing the losers' banks, since the latter, aligned with the political ruling elites, enjoyed wide support, especially among the committee members on the council of rich elites. In contrast to the 700 billion rich, elite, powerfully connected bankers received, the amount homeowners (i.e., Santelli's losers) received continued to diminish from 50 billion of TARP funds for HAMP in 2009 to 30 billion. By November, 2012, however, the program reduced to no more than 4 billion. What started out as one fourteenth of the original amount for bankers became reduced to one seventy fifth, a significant reduction. Taibbi writes: "the bailout program designed to help those lazy, job-adverse, "water-drinking" minority homeowners—the one that gave birth to the Tea Party—turns out to have compromised about one percent of total TARP spending." (pg. 37)

Lending became a source of perfidy. Summers, who is one of the foremost champions in the spread of private central banking promised Congress that banks would be required to increase lending as precondition for the receipt of bailout money. "In the end," writes Taibbi, "no lending requirements" restrained the banks. Just as HAMP fell, the US Federal Reserve rose its number of reserves. "In August 2008, before the bailout began, there were just two billion in excess reserves at the FED." But by October, the number rose to

---

[390] See Hochschild, Arlie Russell, and Anne Machung. The Second Shift: Working Parents and the Revolution at Home. Viking, 1989.

[391] The 2008 Great Financial Crisis, which bears the hallmarks of a crisis the ruling elite orchestrated precisely for the purpose of causing Americans to lose hard assets such as mortgaged real estate, appears to have served as the basis for a much wider set of tactics with numerous different types of operations in a grand strategy of class warfare on American workers. Apparently, Santelli's irrational tirade birthed a political party. The inspiration for the Tea Party, which appeared but suddenly "disappeared" from American politics like a rabbit in a magician's hat, arose from Santelli's rant.

267 billion before rising in January 2009 to 843 billion. TARP recipients exploited the FED's reserves to repay TARP funds, laundering money. The Small Business Lending Fund Obama created in 2010 allowed about a third of the 332 companies t used at least some of the money to repay their original TARP loans. Small banks essentially "took out cheaper loans from the government to repay their more expensive TARP loans," which allowed these banks to benefit from an exemption for limits on executive bonuses mandated by the bailout. In fact, John Schmidt, a jolly banker at the Iowa-based Heartland Financial, used "every penny of [81.7 million form the SBLF] to repay TARP."" (pg. 38) Under such a clearly pernicious scheme, America's ruling elite lended from the Federal government to liquidate its own lending to the Federal government. "The bailout," Taibbi stated, "didn't flood the banking system with billions in loans for small businesses, as promised. It just flooded the banking system with billions for" Tom Crankers.

Alongside TARP, HAMP, or SBLF came a new abbreviation of prevarication. Rather than lending, Paulson called for Congress to approve 250 billion of the original 700 to shift from loans to direct capital injections (i.e., absolutely free money with no strings attached).[392] Under the moniker of a Capital Purchase Program (i.e., CPP), nine of America's largest banks, Citi, Wells Fargo, Goldman Sachs, Morgan Stanley, Bank of America, State Street, and Bank of New York Mellon, which the Federal government awarded for speculation, tulpenmanie, or the consequences of bad bets from gambling (i.e., for being complete losers) received half of the funds being doled out under the CPP. Those banks, which accounted for 11 trillion (which at the time of the bailout is nearly equivalent to the Federal debt on September 30, 2009 at 11.910 trillion), allegedly did not need the money. JP Morgan Chase chief, Jamie Dimon, later claimed that he only took the money "because we were asked to by the [US Secretary of] the Treasury." Although Paulson, who perjured himself before Congress, lied, saying that only "healthy and viable" banks would receive CPP money, Ben Bernake, who provided testimony under oath to the Financial Crisis Inquiry Commission, the body charged with investigating the causes of the economic meltdown that none of the US Federal Reserves more than 23,000 employees or 900 PhDs could explain, admitted that 12 of the 13 most prominent financial institutions in America were on the brink of collapse (i.e., all of the aforementioned banks).

Taibbi writes, "[Officials like Paulson seemed genuinely believe that the market's fears about corruption in the banking system was a bigger problem than the corruption itself." Citibank, for instance, not only received more than 25 billion but begged for an additional 20 billion together with

---

[392] It is often claimed that socialist seek to live life freely on handouts but in actual fact history, especially America's history, demonstrates, as this history itself so demonstrates, that not only generations but multiple different factions of America's capitalist politicians, who are "socialists" in nothing but name (i.e., Mamdani, AOC, etc...), are precisely the ones who have sought to live life freely on handouts. The bailout, for which no single citizen voted or was permitted to vote in a referendum, is an authoritarian measure designed solely for the sake of providing not only unviable but unhealthy banks with handouts. It is the most profound obscurantism to claim that workers, whose lives, troubled, distracted, exploited, seek handouts when in all reality the people who seek handouts, as the 12 recipient banks demonstrate, are the rich, powerful, ruling elite. The rich have bent the State over, knocked its coins out of its back, and broke the piggy bank. It is not the workers, who are not allowed to vote (because super Political Action Committees program them with billions of dollars), let alone live a free life (as multiple layers of bureaucracy befuddle a quiet existence), who are responsible for the broken piggy bank. Workers did not suddenly scramble for coins but the financial oligarchy did. Anyone who misses, deliberately obfuscates, or intentionally distorts this undeniable fact is an arch-reactionary, whose ideas must be subjected to the most severe, unrelenting, scathing criticism.

300 billion in guarantees. The chief financial regulators, whose incompetence is evidenced not only in the facilitation of the crisis the banks orchestrated but in the standards applied to assess bank viability in a post-mortem, exemplify how alongside the rise in America's police State bureaucracy, which is so bored it hires high school children, the rise of a completely useless, money laundering, prodigious financial bureaucracy undermines America. The Fed with 23,000 employees, the FDIC, which is itself a separate entity, or the Office of the Comptroller, a slew of Executive Branches larger than anything the Soviet Union might have allowed Soviets to encompass, deliberately applied false measures to evaluate these insolvent banks, which should have perished with their losses, up rather than down. CAMELS, which stands for Capital, Assets, Management, Earnings Liquidity and Sensitivity to risk, allowed Citibank to receive a three on a scale of one to five. Just before the 2008 Great Financial Crisis, Citibank paid out the third-highest dividend in America 10.7 billion, despite the fact that it had lost 9.8 billion in the fourth quarter of that year alone. The circumstances under which Citibank's assessment with a three CAMELS rating is evidence that the further development of the financial bureaucracy's tends towards America's own self-destruction.

Perhaps the most important contribution Taibbi makes to the bailout is ”the government's lies as a form of monetary aid.” In contrast with the 2008 Great Financial Crisis, the current crisis, which has reached an acute stage after the Fourth Anniversary of the Ukraine war, cannot exploit ”the government's lies as a form of monetary aid.” The US no longer owns the liquity its completely prodigious financial bureaucracy (i.e., The Fed, the FDIC, or the Office of the Comptroller) exploited to bailout America's leading insolvent banks. It is indubitable that Taibbi's article is thus without a doubt one of the most important pieces of American journalism ever published during the 21st century. Its significance, perhaps miniscule in the immediate aftermath of the 2008 Great Financial Crisis for the lack of immediately visible consequences, has grown significantly as the presence of immediately visible consequences has become more obvious. It exemplifies how “wrong decisions early on blossoms into a lush nightmare of unintended consequences.”

Set Theory () • The mindset behind set theory is one of the challenges the 21st century pursuit of discovery adopted from the 20th and 19th century. The decision to dissolve the presentation of proof into a logic based on sets broke from a tradition developed in antiquity. Descartes, for instance, interpreted algebra geometrically as late as the Enlightenment. Cantor's development of set theory in the 19th century, however, led immediately to problems with its exploitation for mathematics. While many of Cantor's ideas were easily represented geometrically such as the infinity of prime numbers, the world of mathematics became transfixed with the idea of sets. In the years following his death, mathematics witnessed a profound crisis. In an overt display of the subconscious, mathematicians attempted to derive the logic of set theory from mathematics in a major departure from the apodeitic reliance on geometry. It revealed the lack of confidence mathematicians behold in the depths of consciousness for the idea of a set. The resulting outpour of

---

[393] Russel's paradoxes about the membership of a set of all sets, for instance, is one of these paradoxes; if the set of all sets is not a member of that set but a set, then the set of all sets is not the set of all sets, for the set of all sets would therefore be a member. The inescapability of set theory is less about mathematics than set theory itself; the theory itself is a crisis but mathematics does not depend upon the theory anymore than the infinity of prime numbers depends upon the cardinality of a set. The problem is method.

thought immediately erupted with uncertainty. On top of Bertrand Russel's paradoxes[393], Gödel's incompleteness theorem demonstrated the futility of certainty in a non-apodeitic system. Overall the appearance of set theory disrupted the steady flow of discovery from the application of the geometric method to a point where the practice suddenly became taboo.[394] The set theoretic mindset has carried into multiple disciplines a preoccupation with logic that has restricted logical thought to no more than a single type of logic without recourse to an understanding of its place in the sciences.[395]

Selydove, the fall of () •

Shahed (Sha · hed) Noun •

Russia launched its first Shahed, one of the most important evolving weapons in the Ukraine war, in the immediate aftermath of its defeat in the face of the great Ukrainian offensive in Kharkiv launched on September 6th, 2022.

Debate rages around the modifications, versions, or models of Shaheds involved in legendary attacks, which Russian or Iranian factory produced them, the country of origin responsible for, or the actual nature, underlying engineering, or specification of the most distinguished parts, components or kits.

The shahed represents the failure of the British Overseas Trade Board's attempt to spearhead the retardation of Eurasian lithographic capability from 1989 to the day the first Shahed struck a target in the Ukraine war. Articulated in a book called Security Export Control, the BOTB produced a booklet aimed at preventing Eurasian, or, rather countries affiliated with or integrated in the U.S.S.R., from developing, exporting or improving lithographic capability beyond the West's at an advance no less than thirty years. The West's failed sanctions made little to no impact on Eurasian microchip technology, especially for weapons like the Shahed.

Shahn, Benjamin () • Ben Shahn (September 12, 1898 in Kovno, Russian Empire - March 14, 1969 in New York City, US) published a series of lectures on The Shape of Content[396] that Norton, which sponsored a series of lectures from 1956 to 1957, compiled into a book for the artist. The book challenges artists to exceed the confines of academic painting. "Is it possible for an artist to function fully in the university?" Shahn's response is to emphasize how progress from dilettantism requires an artist to harden his voice with the iron irreversibility of life choices. He writes: "It is only within the context of real life that an artist (or anyone) is forced to make such choices, against a background of hard reality that choices count, that they affect a life, [carrying] with them that degree of belief and dedication and, I think I can say, spiritual energy, that is a primary force in art.” After the artist’s death a number of exhibits displayed his work but without much for his social realism.[397] PBS, the Public Broadcasting Station, published an award winning documentary on the ” socially engaged, 20th century American artist, Ben Shahn.” The documentary describes him as ”the best known artist in America, with his work at the Museum of Modern Art and on the cover of Time Magazine. From his start in a printer’s shop, Shahn became a successful painter as well as a commercial artist, FSA photographer, War Department graphic artist, and muralist. Shahn immigrated to New York from Lithuania as a child with his family, eventually moving to Jersey Homesteads (Roosevelt), New Jersey.” The film won the Worldfest Houston Gold Special Jury Award, the US International Film and Video Festival First Place: Arts, the Columbus International Film and Video Festival Bronze Plaque, and the CINE Golden Eagle.[398]

---

[394] Feynman's decision to present his long lost lecture, "The Motions of the Planets Around the Sun," with a geometric proof for planetary motion rather than with set theory signaled the beginning of a renaissance for apodeitic geometry that has hardly begun to set into the consciousness of the broad masses of thinkers in the sciences.

[395] In the words of Blaise Pascal's Pensées, "The difference between the mathematical mind esprit de géométrie and the perceptive mind esprit de finesse: the reason that mathematicians are not perceptive is that they do not see what is before them, and that, accustomed to the exact and plain principles of mathematics, and not reasoning till they have well inspected and arranged their principles, they are lost in matters of perception where the principles do not allow for such arrangement. . . . These principles are so fine and so numerous that a very delicate and very clear sense is needed to perceive them, and to judge rightly and justly when they are perceived, without for the most part being able to demonstrate them in order as in mathematics; because the principles are not known to us in the same way, and because it would be an endless matter to undertake it. We must see the matter at once, at one glance, and not by a process of reasoning, at least to a certain degree. . . . Mathematicians wish to treat matters of perception mathematically, and make themselves ridiculous . . . the mind . . .does it tacitly, naturally, and without technical rules." [Dreyfus, Hubert. What Computers Can't Do: A Critique of Artificial Reason. Harper and Row: New York. 1972]

[396] The 70th anniversary of Ben Shahn's The Shape of Content comes on the fifth anniversary of the Ukraine war.

Shanghai’s metro () • At a time when the Trump’s administration’s Health Secretary, RFJK, is focused on improving America’s health care system, Shanghai’s metro became home to the largest number of AI powered doctorless health kiosks[400] during the third anniversary of Ukraine’s war, demonstrating how China’s ability to implement solutions with existing AI applications to solve identical, if not similar, problems is lightyears ahead of America. With 250 AI powered doctor less kiosks, the Shanghai metro, resulting in 95 percent accurate for diagnosis, 70 percent reduction in waiting times, a 30 percent reduction in waiting times. The AI powered doctor less kiosks measure basic human vitals after identifying a patient; these are blood pressure, health rate, temperature. The kiosk requests patients to describe their symptoms. The kiosks analyze the data received from the patients before transfer to a live doctor, if necessary. The diagnosis takes no more than four minutes. The process results in a 30 percent reduction in the costs of healthcare. Patients, whom the kiosks are able to diagnose on the spot, often receive medicine directly from an adjacent vending pharmacy. More than 15,000 users access the kiosks in the Shanghai metro every month, relieving pressure on the hospitals throughout Shanghai.

---

[397] In an article, the academic, Joanne Laurier, who exploits his position in America’s police State bureaucracy to impose propaganda as a weapon, wrote on September 3rd, 1999 under the the title ”Anger and form in the work of Ben Shahn,” the she did not display much of his art either but certainly criticized the author for failing ”to [enter] the realm of truly great artistic endeavor.” Laurier might certainly have earned her place for years of service to the Federal Bureau of Investigation’s ”Strawberry Statement” in the Socialist Equality Party.

[398] The WSWS did not review the PBS documentary on Ben Shahn presumably because Joanne Laurier, a police State bureaucrat, decided that Shahn’s art doesn’t ”[enter] the realm of truly great artistic endeavor.”

Shahn’s contribution to illustration, which news agencies, sources of information, or publishers have sought to disregard for the deep fakes particularized Artificial Intelligence degenerates, is a worthwhile reminder for humanity. The introduction of the artist to information, his interpretation of reality, be he a stooge for a Presidential Administration like Shahn’s work turns out to be from time to time or an instrument for re-election like Shahn’s work for the CIO-PAC turns out to be from time to time, is, nonetheless, far more important than a free placeholder a completely unconscious software program degenerates. An exception is Shahn’s work for Walter Kaufmann, a noteworthy German scholar. In his illustration for Kaufmann’s annotated guide to Hegel, one of the most important post-Enlightenment 19th century thinkers not only for Germany, Europe or humanity but the working class in particular, Shahn’s work reflects the intersection of the artist with the world in a vividly provocative inspiration. Shahn’s dust jacket for Kaufmann’s ” Reinterpretation: Text and Commentary” on Hegel is therefore a great contribution not only to illustration but to art.[399]

[400] The idea of a doctorless health kiosk is a distinctively American idea; during the early 80s the United States witnessed the installation of hundreds of thousands of doctorless kiosks in retail pharmaceutical stores like Walgreens, Rite Aid, or CVS Pharmacy. These machines, which are built without AI, state in the upper right hand corner: ”Test Your BLOOD PRESSURE.”

While the kiosks appeared in the Shanghai metro in October, the impact on doctors has yet to be fully evaluated. Doctors, who are highly trained specialists, are expected to devote more time to serious cases or research into cures for major illnesses sooner with greater insight. These AI kiosks are therefore likely to impact the number of research papers, a barometer for China's rising success against competitors such as the U.S.[401], that Chinese doctors publish on a yearly basis. China's implementation of AI solutions to problems results not in the realization of irrational fears regarding the dangerous prospects of an AI dominated world but extend the reach, impact, timeliness, or power of specialized knowledge to a wider audience. The fact that the Chinese AI powered doctorless health kiosks are a distinctively Western invention distinguishes China's ability to modernize existing inventions with AI power from America's. It is a mark of backwardness that America, who created the automatic blood pressure machines, failed to beat China in the AI race to modernize existing equipment.

Silicon Valley () • Silicon Valley's insistence on allowing governments rather than users or citizens to influence algorithmic feeds[402] in social media is not merely an acquiescence to the Federal government's desire to weaponize technology for inculcating obedience to the status quo ante by means of mind control but the implementation of a conscious hatred for the freedom of individual human thought. Silicon Valley hates individual human thought.[403] The most widely used platforms for social media, for instance, are designed in such a way to preclude even so much as the possibility that a user might influence, exercise control over, or dictate his or her feed. The feed, no matter what the platform, is thus the preliminary means by which the Silicon Valley undermines the freedom of individual human thought.

Shyman, Leonid () • During the Fourth Anniversary of the Ukraine war, the corporate controlled media outlets like the The New York Times began to lay the blame for Ukraine's comprehensive failure to succeed on the battlefield on ”corruption,” as though NATO's generalship played absolutely no role in the Ukraine war.

In an article published on September 6th, 2026, The New York Times claimed that Shyman supplied unnamed Ukrainian artillery crews with mortars whose explosive warheads did not explode. ”The rounds,” wrote The New York Times, ”flopped out of launch tubes or landed with quiet thumps, kicking up puffs of dust."[404]

---

[401] The U.S. deploys the United Auto Workers to waste money on subjecting graduate students, of which a significant portion are doctors, to warrantless wiretaps or illegal drag-net surveillance, controlling graduate students on a department by department basis. The result is a significant reduction in the production of research papers.

[402] In a symbolic ruling against the assertion of a right to emancipate, liberate, or free feeds on social media platforms from the government, SCOTUS displayed its characteristic disregard for individual liberty in a single word: standing. In Murthy v. Missouri 603 U.S. 43 (2024), SCOTUS orchestrated a dismissal for lack of standing. Citizens, especially those the manipulation of whose feed suffered, do not even have a right to raise a claim against a company with social media whose platform operates on the basis of a feed. The overwhelming, all-encompassing, omnipresent bureaucratic superstructure the anti-American ruling elite has constructed above American society has successively disassociated Americans from any relation to America's governance. Americans do not even have standing to raise on a claim for changing the status quo ante. Their relevance has sunk to the level of a passive witness whose life the Federal government controls in all of its most important aspects.

[403] Elon Musk, for instance, expressed clearly his hatred for individual human thought when he declared that technology workers should not be allowed to draft, publish, or seek patents for ideas. The only ideas that matter are not individual's ideas but those that the Federal government amplifies with more than 38 billion dollars.

[404] It is suspicious that a close reading of The New York Times from February 24th, 2022 to the date of publication for the article reveals no previously published report with evidence of

Sitchin, Zecharia () • In his book, Genesis Revisited[405], Zecharia Sitchin is one of the few scholars to produce a comprehensive study of the book of Genesis with an account for all aspects of its manifestation with relation to the ancient origins of the original language. Although a proponent of aliens, his account demonstrates how unreachable the ultimate depths of the great Hebrew text truly are, no matter how erudite a scholar may be in his exegesis.

Silver () • Towards the beginning of the fourth anniversary of the Ukraine war (February 22nd, 2026), the price of silver began to rise steadily.

Sixth Side of the Pentagon () • Although many are unaware of the origin of the pentagon's sides, the history of the pentagon for defense is an established fact from Europe's history. Called a bastion fort or an trace italienne (i.e., a French phrase for an "Italian outline"), the five sided fortification developed during the mid-fifteenth century in Italy during the early modern period in response to developments in weaponry after the

---

defective Ukrainian mortars from 2024. Simultaneously, no previously published report in Russian evidences defective Ukrainian mortars from 2024 during any of the advances in the eastern Donbas where Russia surged the mass of its armed forces. While the The New York Times does not mention the area of contact where the Ukrainians fired defective Ukrainian mortars, none of the Russian army groups appear to have mentioned much at all about Ukrainian mortars, defective or effective. An article from October 9th, 2024 published on page A10 under the title, " Russian Forces Close In on Crucial Towns in Ukraine's East," for instance, The New York Times did not mention anything that might have suggested the troops defending the eastern Donbas from Russia's advances suffered from defective Ukrainian mortars. The fact that the article from the The New York Times focused almost exclusively on defective Ukrainian mortars is itself suspicious, since the Ukraine war underwent significant transformations in warfare after the failed Ukrainian counter-offensive in 2023. Drones, for instance, began to dominate the battlefield with the effort to expand the so-called "kill zone" setting conditions for what type of weapons the Ukrainians would use. Mortars lost significance. Given the fact that Ukrainian mortars became largely irrelevant after the failed Ukrainian counter-offensive in 2023, there is little to no reason at all to believe that Shyman's allegedly defective Ukrainian mortars represented a significant development in the Ukraine war.

Seen within the context of Russia's seizure of Bakhmut-Artemovsk, the emphasis on investigating inconsequential arms manufacturers, whose arms play little to no role in decision on the battlefield for the Ukraine war during 2024, underscores the effort to conceal the lackluster effort the Zelensky regime invested into the development of fortifications in the eastern Donbas. Since the Zelensky regime sought to leverage the expansion of these fortifications against Russian advances, defects in fortresses, fortifications or defenses represented a far greater threat to the Ukrainian effort to defend the eastern Donbas than the relative uselessness of Ukrainian mortars, defective or effective. Few, if any, contractors responsible for building defenses for Ukraine's eastern Donbas, however, have ever been prosecuted, as Shyman has. Ukraine's fallen and falling fortresses in the eastern Donbas reflect the severe impact of corruption more on defense than procurement, mortars, or artillery (whose record is extremely well documented in the Kyiv Post). Compare, for instance, "Zelensky: No reports of artillery shortages for first time in full-scale war," Kyiv Post. May 17th, 2024 with "Ukraine first 2 times fewer shells than Russia, reducing gap, Syrskyi says," Kyiv Post. September 9th, 2024. A series of articles תיק דבקה published during the first year of the war confirms that the disparity separating Ukrainian from Russian artillery exceeded a ration of one to fifteen (i.e., See תיק דבקה during 2023 and 2024). If artillery became largely inconsequential by virtue of Ukraine's consistent deficiency, then any discussion of procurement, be it for mortars or artillery shells, above or beyond defenses, is likely to be nothing less than an exercise in focal diversion.

[405] A rival exegesis of the Bible's Book of Genesis is Irwin Ginsburg's First, Man. Then, Adam!. Ginsburg's book claims the Garden of Eden is in a reality a spaceship that crashed landed on earth. Ginsburgh documents the crash-landing with careful scientific documentation with physics. Ginsburgh relies on the concept of a "Black Hole" to explain the origin of the universe from the perspective of the Big Bang theory. To explain the rest, Ginsburgh relies on Rabbi Louis Ginzberg's Legends of the Bible. Ginsburgh's contribution to the exegesis of creation is therefore not only a great attempt to introduce reason to faith but remarkable for its disregard of the linguistics such as from Sumerian or Akkadian found in Sitchin's account. While both attend to a similar, if not identical, hypothesis, their different approaches demonstrate how profound a challenge understanding can be. These books are therefore indispensable to the analytical emendation of the intellect.

fall of Constantinople from a volley of gunfired cannons such as gunpowder for large artillery. The seige of Constantinople negated the obsoletion of the impregnable walls of the formerly walled fortress. With the interiors angeled now to allow for the project of firepower, the ends of the star etched their way into the evolution of the European fortress. Later architects like Menno van Coehoorn and especially Vauban, Louis XIV's military engineer, excelled in the exploitation of the design, forming its evolutions to a logical extreme. By the seventeenth century, fortresses thus acquired "ravelins and redoubts, bonnettes and lunettes, tenailles and tenaillons, counterguards and crownworks and hornworks and curvettes and faussebrayes and scarps and cordons and banquettes and counterscraps," demonstrating how the geometry of the early Italian design transformed over time.

Unlike the pentagon from the history of Europe's urban defense, the Pentagon in Washington, D.C., developed a "sixth side," most famously from a protest on October 21st, 1967. On that day, over 100,000 protesters gathered in the "District of Columbia" for a protest called, "Mobilization to End the War in Vietnam." The largest protest gathering yet, the protest created a historical "sixth side" the Pentagon has never been able to shake from its history of corruption, bribery, stagnation, money laundering, death, destruction and mayhem. The protest brought together a cross-section of liberal, radicals, hippies, Woodstock enthusiasts, and agents of counter culture. A documentary called The Sixth Side of the Pentagon captured most of the event, whose culmination in the dispersal of the large gathering represented a turning point for opposition to the symbol of the military industrial complex's commitment to long and unpopular wars like the Vietnam war.

What the protesters on that day accomplished through assembly, the Pentagon itself has redoubled, magnified, of augmented many times over with its own lack of accountability. In 2025, the Department of War announced that the Pentagon failed its eigth annual audit, continuing a pattern for a lack of financial accountability far more damning than an assembly of 100,000 protests gathered to condemn a failed war. The Pentagon began its first audit in 2018 after the fiftieth anniversary of the October 21st, 1967 protest, a half of century later. A half a century after protesters sought to hold the Pentagon responsible for its war, to hold the Pentagon accountable, the Pentagon itself could not hold its itself responsible for its own finances, failing the first audit. The failed first audit initiated a pattern the Pentagon has not decided to break for the better part of a decade. The sixth side of the Pentagon formed, thus symbolizing the Pentagon's lack of accountability.

In all the Pentagon is responsible for the combined budgets of the the Army, Navy, Air Force, Marine Corps, Space Force, Defense Advanced Research Projects Agency (DARPA), Defense Logistics Agency (DLA), and Defense Intelligence Agency (DIA), National Security Agency (NSA), among others. Key to the Pentagon's lack of accountability is the bureaucratization of components of the bureaucracy whose bureaucratization has contributed significantly to a further bureaucratization of the Pentagon with respective contributions to the proliferation of a lack of accountability in the agency. The Defense Contract Management Agency (DCMA), for instance, is an agency unto itself simply for the sake of managing contracts. Anyone familiar with the name would think that contract management would actually lead to a situation where contracts are managed but under the Sixth Side of the Pentagon an agency for the contract management is by design a bureaucratization of components of the bureaucracy whose bureaucratization has contributed significantly to a further bureaucratization of the Pentagon with respective contributions to the proliferation of a lack of accountability in the agency. The Defense Finance and Accounting Agency (DFAA), for instance, is an agency unto itself simply for the sake of finance and accounting. Anyone familiar with the name would think that finance and accounting would actually lead to a situation where finance is accountable but under the Sixth Side of the Pentagon an agency for finance and accounting is by design a bureaucratization of components of the bureaucracy whose bureaucratization has contributed significantly to a further bureaucratization of the Pentagon with respective contributions to the proliferation of a lack of accountability in the agency. The list of agencies, whose name suggests accountability but whose practice is the opposite, is endless.

The geometry of the Pentagon is therefore a profound riddle. While outwardly the Pentagon is a five sided fortification, the Sixth Side of the Pentagon has demonstrated a propensity for the evolution of "ravelins and redoubts, bonnettes and lunettes, tenailles and tenaillons, counterguards and crownworks and hornworks and curvettes and faussebrayes and scarps and cordons and banquettes and counterscraps," demonstrating how the early geometry of the Pentagon transformed over time from a war machine responsible for death, destruction and mayhem on an industrial scale in wars from Vietnam to Afghanistan to a machine for the inward generation of unaccountability. The proliferation of new agencies within the agency is thus a reflection of the logical extremes unaccountable bureaucratization exceeds in its manifestation over time.

Snowden, Edward () • The greatest proponent of enforcing America's own laws against the Federal government, Edward Snowden's exposure of America's vast criminal conspiracy against the U.S. Constitution provided the basis for many Americans reporting on the Ukraine war during all of its years with analogical precedents for understanding how America's police State bureaucracy's continues to disobey American law.

Snowden's release of secret documents shattered false image of a country committed to its own principles, laws, or founding documents, thoroughly discrediting the Federal government's claim to legitimacy. It is a genuine hope among many Americans taht Edward Snowden will return to American to occupy Washington's office with a competing degree of the founder's humility.

Adam Smith () • In the history of economics, Adam Smith initiated the study into the labour theory of value.

---

[406] Prior to Jeff Bezos' acquisition of the Washington Post on August 5, 2013, whose tenth anniversary passed during the second anniversary of the Ukraine war, the Washington Post managed to publish ground-breaking material, whose dissemination in the public led to a higher understanding of the challenges not only working class Americans but workers around the world face with the degeneration of America's superpower. Bezos, who could not care less about workers, not only shuttered the newspapers into Mint Media, Kitco, Sovereign Media, Breakthrough News, KitCo, MondoWeiss, Novara News, etc... These news agencies grew out of the Bezos shuttering the Washington Post. In the period of America's steepest decline in global superpower, institutions such as the so-called "Fifth Estate" have lost all or most of their credibility with the population, as it has dawned on the population with an ever increasing number of epiphanies how much time, energy, or manpower is invested not only in the preservation of controlled narratives but in outright falsehood, deception, or deceit. The only exception is perhaps KitCo, whose reporting on the precious metals is far more objective even perhaps Bloomberg's. It is unclear why KitCo is more objective than Bloomberg but a possible reason may be that various factions within America's ruling elite have no choice now but to surrender their subterfuge on precious metals for clarity in that regard has now become an issue of "national security." If the US cannot understand the role for gold the COMEX can no longer control, then the US may not be able to understand the new monetary era replacing the US dollar as the instrument of global finance.

State-within-a-State () • According to the Washington Post[406], the US government ”responded” to the ”terrorist” attacks of 9/11 by creating the a ”top-secret America,” literally a ”state-within-a-state,” so that the ”state-within-a-state,” which relies almost exclusively on extraordinary police State powers such as Karl Schmitt’s ”State of Exception,” may exist on top of or at the expense of the working population in America.

At the time award winning journalists, Dana Priest and William M. Arkin, began publishing the famous three part series of articles, the journalists concluded that the the US government founded no fewer than 1, 277 ”organizations” to work on programs related to ”counterterrorism”[407], homeland security and ”intelligence” in no fewer than 10,000 locations across the United States.[408] Dana Priest and William M. Arkin concluded that many security and intelligence agencies perform duplicative work. For example, no less than five Federal organizations and military commands track the flow of money to and from ”terrorist” networks, which could be any American whose account exceeds the lowest threshold of the Bank Secrecy Act (Public Law 91-508) from October 26, 1970 or anyone the US government deems to be a ”threat” to anything, especially the unsolicited exposure of its domestic terrorist regime.

Published on July 19th, 2010, Dana Priest’s and William M.

---

[407] If the Federal government either through calculated negligence or direct involvement orchestrated the collapse of the Twin Towers, ”counterterrorism” assumes an entirely new meaning. If the State itself orchestrates acts of ”terror” to argue for a greater centralization of its power at the expense of the population, then State-orchestrated ”terror” can only pertain to the further maintenance of the ”state-within-a-state” required for its further orchestration. It is self-fulfilling prophecy where the prophets fulfills his own prophecy.

[408] If the number of these undisclosed locations is divided by the number of major centers of population in the US, then the concentration of these government organizations per populated centers becomes no less than 200. 200 centers of undisclosed locations for government organizations involved in ”counterterrorism,” ”homeland security,” or ”intelligence” per the top 50th most populated cities according to 2020 statistics published by the US Census Bureau amounts to an overwhelming preponderance of police State surveillance across the US. If each one of those centers costs roughly 20 million dollars to operate, which is an extremely conservative estimate (given the fact that the 854,000 employees with ”security clearances” at these 10,000 undisclosed locations multiples a 250,000 salary for 84.5 employees per location at 21,350,000), the amount the American public must pay for orchestration year-over-year equates roughly to 200,000,000,000, a fifth of a trillion of dollars. Put differently, the US Federal government must pay the equivalent of 200 hundred unicorn startups year-over-year without a marketable Initial Public Offering on the stock market or a return on investment from a commodity for the American public to be subject to scalable, extensible, comprehensive, anti-Constitutional, drag-net, or targeted systemic violations of the Fourth Amendment. It is important to mention that under the Soviet Union, whom allegedly unforgiving iconoclasts of history hail as the most authoritarian regime the earth has ever witnessed, never managed to expand the KGB much at all. It certainly never could have imagined a network of more than 10,000 centers with 1,000,000 employees. Vadim Bakatin, who published a memoir after the dissolution of the Soviet Union, stated in *Избавление от КГБ* (pp 43 46) that upon taking office on August 29, 1991, the total number of employees in the KGB amounted to approximately 480,000, with the Border Troops Chief Directorate, stating that his troops represented less than half of that number at 200,000. Without the border troops, the entirety of the KGB never amounted to less than half of the total number of Americans with security clearances according to the figures Dana Priest and William M. Arkin provide in their groundbreaking article (i.e., 854,000, nearly 1.5 times as many people as live in Washington, D.C.), which is likely a figure falsified to reduce the public, apparent size of the police State bureaucracy in America. It means that even in 2011 when Dana Priest and William M. Arkin published their article in its expansion of the police State bureaucracy the US nearly quadrupled the number of employees in the KGB, exceeding even the wildest dreams of the most hawkish members of the Soviet Union. It means that for intents and purposes, the US police State bureaucracy, the sum total of the people enlisted, the agencies, commissions, offices, departments, bureaus, or corporations associated with these enlisted people, or the various headquarters, disclosed or undisclosed, represents a quadrupled magnification of the KGB. The US police State bureaucracy is therefore four times worse the Soviet Union’s KGB. It gives the lie to the many Americans who claim that the US, ruthless as it may be, is a capitalist country with a free market economy operating under laissez-faire. It is not. It is a worse form of the Soviet Union.

Arkin's series of three articles on " top secret America" represents only a solicited exposure. It is not an unsolicited exposure. It means that perhaps most of the information these two journalists provided were "watered down." The situation they present could be a lot worse than the censors, with whom these two journalists were required to work, blocked the publication of truthful numbers, figures, or statistics on the issue. Given the secrecy of the reported issue, Americans can safely bet on the concealment over disclosure.

The three articles with their respective dates of publication are as follows: 1) "A hidden world, growing beyond control" (July 19th, 2010), 2) "National Security Inc." (July 20th, 2010), and 3) "The secrets next door" (July 21st, 2010). The three-part series took nearly two years to research with the assistance of more than a dozen journalists. The Federal government required Dana Priest and William M. Arkin to be subject to censorship throughout the research period. The Federal government, for instance, required both to provide an online database, as well as the articles to be published, to government officials several months prior to the publications of the three part report. The Federal government restricted the journalists' data points to only those for which either one could find no fewer than two public records. The Federal government merely ghostwrote the entire story.

The publicly announced cost of the U.S. intelligence system is "75 billion, 2½ times the size it was on Sept. 10, 2001. But the figure doesn't include many military activities or domestic counterterrorism programs." It is likely that the figure for its cost is closer to 200, 000, 000, 000 but could be much higher.

Dana Priest and William M. Arkin continued the story in a PBS documentary under the title "Top Secret America - 9/11 to Boston Bombings" (Season 2011; Episode 13; 53 minutes, 51 seconds). It was published on September 6th, 2011. The subtitle for the program states: "In the aftermath of the Boston Marathon bombings, FRONTLINE investigates the vast maze of clandestine government efforts created after 9/11 for the purpose of hunting terrorists and preventing future attacks."[409] That same month, the book Top Secret America: The Rise of the New American Security State was published by Little, Brown and Company.

Steinberg, Saul () • On March 29th, 1976, The New Yorker published an edition for 75 cents with Saul Steinberg's illustrated "View of the World from Ninth Avenue." Steinberg's most famous piece of artwork, his subject would have been treated better, had he selected Washington, a part of the United States without statehood called the District of Columbia. Washington's distored self-importance relative to its true place in the world would have been far more fitting as the subject of cartographic mockery than Manhattan. Considered to be one of the greatest magazine covers of the past 40 years in 2005, the rise in American distrust of the media in the beginning of the 21st century led to a decline in the employment of artists for a continuation of the 20th century practice of producing artistic covers.

---

[409] The documentary, the quality of whose content even greater degrees of hindsight harden with even more exposition, draws into sharp relief the fact that America's police State bureaucracy, which includes several layers of redundant duplication, is a parasite on America's body politic, accomplishing more for America's destruction through its insistence on expansion than for protection in its execution of any alleged "duty." The more time passes from the film's debut, the more the police State bureaucracy grows, the more clearly Americans realize just how serendipitous the 911 "terrorist" attacks became for justifying the police State bureaucracy's prodigious expansion, the more the Federal debt grows. The film fully exposes the police State bureaucracy by way of the Director of National Intelligence. The documentary demonstrates effectively how the establishment of a Director of National Intelligence led inevitably to an expansion of the Director of National Intelligence from a small luxury suite in expensive real estate to a multi billion dollar complex where no one knows what he or she is doing. The film does not mention how in multi-billion dollar complexes like that of the DHS' work the children of America's collaborating upper middle class. These are the prosecutor's, public defender's, judge's, sheriff's, police officer's, or the local Federal agents' children, who become "mandarins" in a huge, aimless, unproductive bureaucracy designed to suck the life out of these children as much as they suck the life out of the local population against whom these multi billion dollar complexes or undisclosed locations are illegally deployed.

During the Ukraine war, hardly a single one of the major print media has ever employed a famous artist to caricature an aspect of the war. The lack of a sense of humor is more of a reflection of the dedication the West's print media has for the production of pro-Ukrainian propaganda than a truly objective evaluation of all the belligerents in the war. Coupled with the rise of AI generated images from OpenAI's GPT Image API, the view of the Ukraine war has hardly raised eyebrows among members of the public for its arts.

Stolypin reforms () • During the third anniversary of the Ukraine war, Donald J Trump initiated a series of Stolypin reforms. Aimed more at stimulating the economy than changing the status quo ante, these reforms (i.e., interest rates for credit cards capped at 10 per cent, an exemption from property tax at the age of 65, a child savings account for children born in 2026, etcetera...) represented a last-ditch effort at populism in the face a shift of world historical significance for America's standing on the global financial arena. Scheduled to reach 40 trillion dollars before the 250th anniversary of the United States on July 4th, 2026, the Federal debt has become so large that credit markets have already begun to search frantically for an escape latch. Gold, for instance, rose more than 75 per cent from October, 2025 to January 2026, rising from 4,000 to 4, 600 dollars, the highest level for gold in its history. Blackstone, for instance, transferred more than two trillion dollars of its wealth abroad; while the disclosure alone is without details, one can only wonder how the wealth might well have been converted.[410] Against the backdrop of a diminished dollar, the U.S. posted a trade deficit in the amount of 1.2 trillion dollars. Equivalent to China's trade surplus, the disparity marked a decisive turn of events in the historic competition between the two countries, despite Trump's attempt to coererce Xi Jinping reduce its trade surplus with the U.S. through tariffs. Almost none of the reforms resulted in immediate relief for working American families, the elderly, disabled, sick, or unemployed; the reforms became more of a gesture of goodwill than a resolution to any one of the problems these reforms sought to address.

Anthony C. Sutton () • In his book, The War on Gold[411], Sutton is perhaps the first to lay out the case in detail from a historical perspective that the US Federal Reserve wages war on gold. His book, which celebrates its 50th anniversary during the fourth anniversary of the Ukraine war, details the developments governments like the US Federal government witness in the adoption of a fiat currency, whose highest expression terminates in speculation, war, or ruin, for legal tender, exchange, or a store of value as opposed to gold, silver or other precious metals.

---

[410] The United States of America restricts the amount of money an American may pocket on his or her way out of the country to no more than 10,000 but imposes no limit on the amount of money a company is allowed to transfer abroad.

[411] The US continues to be engaged in a war on gold. During the fourth anniversary of the Ukraine war, the US began to intensify its war on gold with the creation of a shock in the demand for oil. President Donald J Trump's illegal war of aggression against Iran continues to create a shock in the demand for oil, which has caused countries to sell not only gold but US Treasury Notes for the liquidity required to pay for a commodity, whose refined products have witnessed the highest price in the history of mankind (i.e., six dollars per gallon for diesel) in the month of September, 2026. Only by causing such a liquidity crisis has the US been able to suppress the rising price of gold, whose historic record on January 29th, 2026 exceeded more than 5,600 US dollars.

Sutton calls George Herbert Walker Bush ”two face” in a book published in 1988. G. H. W. B. would later help his son, an alcoholic, George Walker Bush (July 6th, 1946), become the 43rd President of the United States. G. W. B famously oversaw the American ruling elite orchestrate the terrorist attack on September 11th, 2001, which celebrated its 25th anniversary during the fourth anniversary of the Ukraine war.[412]

social credit score () • A person’s social credit score, much like his or her FICO score, is one of the instruments of power the massive bureaucratic American superstructure wields over the individual to inculcate obedience to the status quo ante. Just as the score FICO sets arbitrarily against an individual’s will is beyond his or her control,[413] a person’s social credit score, a tableau the police State bureaucracy calculates based on a series of factors undisclosed to anyone but its most secret agents, is beyond his or her control. Just as individuals occasionally respond to events irrationally (for lack of time, knowledge, or understanding), the Federal government, whose agents react to events in which an individual plays an antagonistic or protagonistic role, responds irrationally, although more often than not. Accordingly, individuals, whose social credit score becomes subject to mechanisms like those in the FICO, suffer immensely for lack of rationality by no more than chance.

Socialism AI () • Xersonesus is the inspiration for the Socialist Equality Party’s decision to release ”Socialism AI,” a project for transforming the publications on the website into a database for ChatGPT 5.1 to process individually. David North’s decision to deploy ChatGPT 5.1 on a database of publications from the Socialist Equality Party’s website, however, is bound to ricochet. Although AI may be modified, restricted, or

---

[412] The State orchestrated ”terrorist” attack on September 11th, 2001, which took the lives of no fewer than 2, 977 innocent Americans, represented a major turning point in the decline of American superpower, whose descent subsequent events not only confirmed but accelerated. The development of the ”War on Terror,” which culminated in the recruitment of Sunni muslims to fight on behalf of ISIS in the Shams Kkhalifate during or after both the Iraq, Afghan or Syrian wars, transformed American law with the unpatriotic ”Patriot Act.” The ”Patriot Act” facilitated the establishment of a vast, sprawling, ever widening anti-Constitutional police State bureaucracy, the funding for which sapped America’s national income, adding fuel to the fire of America’s Federal debt (See ”Top Secret America”). Americans not only became less free but became more indebted than ever before. September 11th, 2001 represented the crescendo in the turn from US global hegemony after unipolar moment in 1991 to the beginning of its complete, total, utter disintegration in subsequent periods. During the first year of the Ukraine war, for instance, the US fled from Kabul, Afghanistan in disgrace, leaving hundreds of billions of dollars worth of military equipment to the ”terrorist” regime the US failed to oust with military power. 20 years of American military power failed to effectuate a change of state in Afghanistan. Afghanistan left the war stronger, building routes into the primary Eurasian trade routes with the great Eurasian powers, Russia and China, for oil. The Afghan government’s recently discovered wells are expected to provide the Afghan government untold wealth that none of America’s oil companies can touch.

[413] FICO scores have absolutely nothing with credit. A person’s income determines the degree to which he or she is able to repay a debt. Repayment history is nothing more than a reflection of income from employment. If the business cycles undermine employment, the business cycles effectively determine credit scores. These are completely out of the hands of those whose employment is at will (i.e., the vast majority of Americans).

[414]

The police State bureaucracy likely leveraged the database from the Van Sickle Leftist Pamphlet Collection, 1900-1993 contributes to PRISM: Political Rights Issues Social Movements, a collaborative digitization project of the libraries and special collections departments of Florida Atlantic University (FAU), and the University of Central Florida (UCF), to develop the data for training the Large Language Models responsible for Mausoleum AI.

Consisting of materials focusing on a wide range of political and rights issues and social movements which provide insight into the prevailing leftist and liberal views of the times from countries controlled, AI is exceptionally good at identifying patterns from large amounts of data.[414] An AI query for union betrayals into Socialism AI may well produce an exhaustive list of the history of union betrayals the SEP derided. The number of times the SEP has blamed the unions with whom its employer, the FBI, collaborated in the background, to orchestrate a dead end or a sell-out contract would be enumerated in such exhaustive lists. These AI generated enumerations shall serve as a speaking indictment of the SEP's leadership on a factual basis for its complicity in terminating these struggles. Had the SEP's leadership not been complicit with the FBI's union collaborators in orchestrating these struggles, at least one or more of the struggles would have led to a completely different outcome. The fact that the SEP has repeatedly sought to blame unions for sell-out contracts in labor struggles, especially during the Biden administration, exhausted the diminished returns that narrative might have had on the further suspension of disbelief. The SEP has played its card. Socialism AI will therefore underscore the progressive role that AI plays in its analysis of politics, society, or labor by its own nature. The consequences of AI are inescapable. It is has already initiated the beginning of a revolution that no one can stop, let alone the Socialist Equality Party. Least of all shall the SEP escape AI's consequences. Socialism AI will open up the floodgates on the SEP. The idea of a real ID system designed to starve people into submission is akin to the most serene naivety that graced Louis XVI when bread riots exploded into the French Revolution of 1789.[415]

The Socialist Labor Party () • Many decades before the American ruling elite's paranoia manifested itself in the form of a police State bureaucracy at the center of which is the Federal Bureau of Investigation, America's right to Freedom of Speech flourished, allowing parties like the Socialist Labor Party, founded in 1876, to begin entirely active, completely legal, politically healthy competition with America's politicians, political movements or politics. Celebrating the 150th anniversary of its found-

---

all around the world; from the United States to Korea and India to Canada, the Van Sickle Leftist Pamphlet Collection contains a number of works on socialism America's own FBI agents collected, compiled, curated, or composed. Arnold Petersen (April 16, 1885 – February 5, 1976), the National Secretary of the Socialist Labor Party of America from 1914 to 1969, for instance, is a career agent in the Federal Bureau of Investigation, whose works constitute a large number of the pamphlets in the Van Sickle Leftist Pamphlet Collection. Petersen's activity is noticeable immediately from his amalgamations with De Leon. In nearly every single one of De Leon's republished works is Petersen's amalgamation, "The title of the pamphlet "All Power to the Socialist Industrial Union" where Petersen anachronistically amalgamates De Leon's concept of a global trade union under the banner of the Industrial Workers of the World with Lenin's call during the October revolution for the Bolsheviks to persuade the Soviets, worker councils, to seize control of the Provisional Government in Petrograd, Russia in 1917. The title Arnold Petersen's pamphlet "All Power to the Socialist Industrial Union" is as much an interpolation by later FBI integrated foes of socialism as it is a thinly veiled critique of Lenin's critique of trade unionism. A central activity in sabotage is distortion. If the wine is full of impurities, no symposium ensues. The idea that Lenin's call during the Russian revolution for all power to the soviets could somehow be "amalgamated" apocryphally is not merely an anachronism (for De Leon knew nothing of Soviets in 1905) but a perversion of the Soviet at Lenin's time (for Soviets could not be equated to trade unions in form, substance, or role). Arnold Petersen, who is more than likely a Hooverite agent, knew exactly what he was doing by combining De Leon's trade unionism with Lenin's call and the Soviets; he was engaged in a boldface distortion designed to sabotage objective consciousness through amalgamations. Arnold Petersen's Burlesque Bolshevism is perfect example of the FBI's distortions. His entire writing career, if not his entire career altogether, is a career of FBI distortions. The Van Sickle Leftist Pamphlet Collection is full of these FBI distortionist pamphlets.

Since most of the publications in the database are like Petersen's, the database is more a reflection of the historical crisis of American socialism in the 21st century than an accurate reflection of reality. Based on databases like Van Sickle Leftist Pamphlet Collection, Mausoleum AI cannot but reflect the crisis than the reality.

[415] "Qu'ils mangent de la brioche."

ing during the fourth anniversary of Ukraine's war, the Socialist Labor Party is a reflection of the freedom America enjoyed before the manifestation of the Federal government's paranoia began to destroy the very fabric of the founding father's republic in a systematic, methodical, bureaucratic manner. The oldest socialist political party in the United States, the Socialist Labor Party advocated for socialism at the time socialism lived in the minds of the people, demanding the collectivization of ownership for industries, a central tenet in the transfer of the modes of production to workers but away from the self-destructive tendencies of the bourgeoisie, whose manifestation in the real economy, let alone in the evisceration of America's Bill of Rights, is so damaging as to be the primary threat to the nation itself. The Socialist Labor Party a significant role in early American labor movements and political campaigns, particularly under the leadership of Daniel De Leon.[416] Daniel De Leon's analyses of America's Constitution, many of which are still in print under the New York Labor News publishing house, testify to the entirely active, completely legal, politically healthy competition the Socialist Labor Party exuded for America's great experiment in democracy.

sogo shosha investments () • In response to Warren Buffet's strategy for Japanese bonds, Japan's Prime Minister Sane Takaichi orchestrated a Japanese conspiracy over an alleged proposal to cut food taxes together with its potential, associated, fiscal risks.[417] The conspiracy caused panic, forcing a significant rise in the yield for Japanese bonds; the yield on the 40-year bond reached 4.2 per cent, the highest since its debut in 2007, while that of the 10-year rose to 2.3 per cent, marking its highest level in nearly three decades. The effect became twofold; the mantle for investing free money from interest free Japanese loans pegged to Japan's currency fell; Warren Buffet profited so immensely that the Forbes trumpheted his success with a celebratory artice under the title, "Japan's Chaos is Warren Buffet's Jackpot."[418] The article describes how Warren Buffet's decision to invest in five trading houses epitomized ”Buffett's smart buying: the yen denominated debt he borrowed to acquire his stakes costs less than 1 per cent per year, while the trading houses were paying dividends of about 4 per cent per year. Called sogo shosha in Japanese, the sogo shosha (or “general trading companies”) were Mitsubishi, Mitsui, Itochu, Marubeni and Sumitomo. Accordingly, history will remember Buffet, the famous ”whale of London,” as the financial samurai of the sogo shosha.

---

[416] In his address to workers from St. Petersburg Russia regarding the January 9th, 1905 revolution, De Leon stated: "The government wants fight; it shall have it."— so say the workingmen of St. Petersburg. And it was only on Jan. 22, less than one year ago, that the workingmen of St. Petersburg were the Czar's petitioners, and as such were humiliated and murdered. Today they are the masters of his capital, defying his authority, and hastening his preparations for flight! What a great transformation! An imposing revolution!! Think you that this change from beggarly supplication to manly triumph was born of the sentiments inculcated by the theories of the mutual interests of oppressor and oppressed and trade autonomy? Think you that these St. Petersburg workingmen gave ear to leaders who wined and dined with the Czar, and accepted his bloody friendship and bloodier money in the name of Labor, as do the labor leaders, the Gompers, et al., who associate with the Carnegies and Fricks, whose hands are red with the blood of Homestead's workingmen, and whose money is tainted with the bloody accretions of many inhuman enterprises? Think you all this?-If so then disabuse your mind of the thought. Know that these men are fired by the sentiments of Socialism which recognizes that there are no mutual interests between oppressors and oppressed; that calls upon the working class to unite to a man for the overthrow of all oppression by wiping out the class interests that are its cause; that impels them to labor for social ownership and social interests as against class ownership and class interests, and that over and above all awakens in them the consciousness of their own great power and mission as the pioneers of a new society, in which use and fraternity shall take the place of profit and war. These men are thrilled by the first throbs of a new social order. They are shot through and through with the hope of a new era grander and greater than any the world has yet known. Who wonders then that they are no longer groveling beggars but triumphant men! And who would deny that the sentiments that actuate these men can transform the American workingmen, who are further on the road to this new society than the Russian Working Class are likely to be when the present revolution is over? In Russia one has but a forecast of future America." Daily People Vol. 6, No. 173. New York, New York, December 20th, 1905.

[417] ["Japan's 40-year bonds surpass 4 per cent for first time," Financial Times. January 20th, 2026]

[418] The article later appeared as follows: ["Why Warren Buffett Is An Unexpected Winner From Japan's Market Turbulence," Forbes. January 21st, 2026]

Buffet's sogo shosha trade is significant, however, for the statement's Citadel's CEO made at Davos, Switerland during the 2026 World Economic Forum. In a shot across the bow at Donald J Trump's so-called ”populist” reforms (the majority of which are merely Stolypin reforms), Ken Griffin threatened Trump at Davos, Switzerland, declaring: ”I actually think there's an explicit warning that if your fiscal house is not in order, the bond vigilantes can come out and retract their price,” Griffin said.[419] Griffin's statement epitomizes the problem the United States faces with the Federal Reserve. The Federal government, which is obsessed with centralized power, is at the mercy of the banks, who pull the strings in Washington. America's monetary policy, far from the reform FDR's default believed he could achieve, has put the United States in a position of weakness. Griffin talks down to Trump. Trump, whom Griffin belittled, has no choice now but to cover before the banks. Described as ” independence,” private central banking, allowing banks to sell America its currency on loan, is the central issue of the day. Buffet's sogo shosha trade demonstrates not only the issue's importance but a country's monetary policy empowers a banker to manipulate its entire economy for the personal benefit of a single individual. Griffin's threat to Trump is not only a declaration of war against Trump's populist strategy but an implementation of the financial pecking order. The problem for Griffin or Griffinists, who believe in the eternal power of capital, is that the chickens have already started to roost, regardless of Trump's populism. Griffin's declaration of war is thus nothing more than a reflection of his nostalgia for bygone days.

Solomon, King () • King Solomon's praise for knowledge over wealth reveals its contemporary relevance for much of America, if not the world.[420]

---

[419] Griffin dared not say the word but one cannot help but think he had in mind the idea of an audit. No one dare beg for a Compte rendu (the full name of which is a Compte rendu au Roi (i.e., ”Report to the King”) like the document Jacques Necker published in February, 1781, the Finance Minister to King Louis XVI. In the report Necker, a constitutional monarchist, a political economist, a moralist, an author of a pamphlet attacking the principle of equality, explained in a characteristicly cryptic manner how ordinary revenues in France were exceeding royal expenditures by over 10 million livres (i.e., a massive surplus), while he conspicuously concealed ”extraordinary” accounts. Necker's Compte rendu thus accomplished a dual purpose. Its publication made the country's budget public – ”a novelty in an absolute monarchy where the state of finances had always been kept a secret.”[] But it also allowed for the public to subject the king's finances to a meticulous audit, especially regarding its omissions from France's participation in the American War of Independence against Great Britain. While the latter would only come after creditors unscrupulously awarded the heavily indebted king a new lot in the amount of 520 million livres, the fact ultimately became a causative factor in what followed. By 1788, continuously compounding interest on the king's renewed national debt racked France with a fiscal crisis. Necker's dismissal on 11 July 1789 corresponded with a Newtonian reaction among Parisians who set about to begin the famous Storming of the Bastille. Griffin's decision to replace the word ” audit” with a fiscal house in order is thus calculated, premeditated, Orwellian Doublespeak, since Griffin knows neither an ”audit” nor its public publication is either possible or even desirable for the United States.

[420] America's corrupt police State bureaucracy's decision to engage in false arrests without a warrant, formal charges, or due process, is a complete and total negation of the fundamental principles of the Enlightenment embodied in America's founding documents, a negation of the core of America, a self-reflective negation of America itself, for America is nothing without its core. The police State bureaucracy's belief that the best way to live for an America is to accumulate wealth

The most important contributor to the scientific revolution, Sir Isaac Newton, heaped praise on Solomon. In 1675, Sir Isaac Newton annotated a foreword to an anonymous copy of "Manna - a disquisition of the nature of alchemy", a treatise from fellow scholar Ezekiel Foxcroft, where he expressed his reasons for examining Solomon's Temple by writing: "This philosophy, both speculative and active, is not only to be found in the volume of nature, but also in the sacred scriptures, as in Genesis, Job, Psalms, Isaiah and others. In the knowledge of this philosophy, God made Solomon the greatest philosopher in the world." Obsessed with "prisca sapientia",[421] Newton studied 1 Kings of the Hebrew Bible, which he translated himself from the original Hebrew. Newton dedicated the results of his study to an entire chapter on Solomon's temple[422] in a work published after his death in 1728 called, The Chronology of Ancient Kindgoms, his most comprehensive work on the subject.

Solzhenitsyn () • Aleksandr Solzhenitsyn is an unremarkable man[423] whose refusal to address the inner-party struggle during the 1920s is the salient reason for his personal transformation. Aleksandr Solzhenitsyn did not refute the labor theory of value. He abandoned it. He abandoned it after no more than eight years of suffering. The revolutionaries, like Lenin, suffered for decades before they were in a position to secure for the Russian population the experiment, whose results split over time due to the inner-party struggle. Czar Alexander III, for instance, ordered Lenin's brother, Alexander Ulyanov, to be executed on May 20th, 1887. Lenin had to wait more than thirty years to overthrow the monarchy responsible for the proliferation of injustice his brother foolishly opposed with the tactic of terrorism, a tactic Lenin correctly criticized throughout his published works. Solzhenitsyn's eight years in a Soviet gulag is noth-

---

without any appreciation for how wealth is accumulated in America is not only naive but contrary to the pursuit of life, liberty or property, since no individual, let alone a representative from government, may impose upon an American citizen his or her vision of that pursuit. The pursuit, however, is completely meaningless, if individual natural rights or liberties aren't preserved.

[421] Scholars have hardly had time to find the keys to unlocking the treasury of information in the Arabic manuals the Italians never managed to translate at the beginning of the Italian renaissance. The chapter, he language of folk medicine - A philological note on the pathology of syphilis and leprosy in a Morisco Arabic MS., for instance, is an example of the type of information for which scholars have yet to find the key to unlocking. Borg, for instance, explains how Arabs described in the Morisco Arabic manual utilized the fluids from a placenta stored in a leather sack to heal wounds or injuries sustained during combat. (Korot, 2021; vol. 21) Since Borg's publication of the Morisco Arabic manual, multiple scientists have won award, prizes or accolades for demonstrating how positive health outcomes through the application of amniotic fluid, cells, or related stem cells arise. Borg reviewed a book on Yemen herbal medicine published by Brill in Leiden, Netherlands in 2009 by Ingrid Hehmeyer where information about the medicinal properties of folk medicine in the indigenous heritage of Yemeni healing practices is explored in depth. The area in which the greatest "prisca sapientia" exists right now is thus in untranslated Arabic manuals.

[422] The commandment for the tabernacle is more straightforward than for Solomon's temple. Heschel claims the tabernacle came from a compromise with the nature of man. (See Heschel, 1951; "Prologue," The Sabbath fts8-9 where he claims "The erection of a tabernacle was not commanded in the Decalogue." (c.f., Exodus 25:8) Solomon, David's son, fulfilled God's command to David in Samuel 2:7 for David's descendant to build a house for His name when he constructed a resting place for the Ark of the Covenant in the Temple.

[423] Solzhenitsyn offers no comparison. A Jewish woman, who suffered a far worst fate, never denounced Marxism. In her heartbreaking memoir, Ginzburg details her odyssey from Kazan to Kolyma but remains a communist. Ginzburg, who endured unimaginable hardship, for more than 18 years died a true communist. She died before laying eyes on her son, Alosha, but Solzhenitsyn who hardly suffered denounced his commitment before his family, eyeball-to-eyeball. Who is remarkable? Clearly Ginzburg is a remarkable woman whose memory must be celebrated with far greater admiration than Solzhenitsyn's. In comparison to Jewish, Christian or Mohammedean martyrs, Solzhenitsyn's denunciation is an exception rather than the rule. Bourgeois politicians who cite Solzhenitsyn rely upon a profound ignorance among the reading population.

ing compared to the three decades revolutionaries like Lenin endured under the monarchy. During the three decades Lenin labored on behalf of the Russian working class to introduce class consciousness into the ranks of the Russian working class, Lenin had no idea he would ever be free from the Czarist "Police Department" but Solzhenitsyn knew that after the end of his eight year sentence he would be exiled. At no time during those three decades did Lenin abandon the labor theory of value. On the contrary, Lenin fought a tireless struggle to uphold the labor theory of value no matter what the challenge. Solzhenitsyn, on the contrary, abandoned the labor theory of value after his first major life challenge. He did not lose his brother. He lost eight years of his life.

Solzhenitsyn lacked a propensity for dreams Lenin relished. At the conclusion of his book, *Что делать?*, Lenin made the following remark: "I shall try to hide behind the back of Pisarev. 'There are rifts and rifts,' wrote Pisarev of the rift between dreams and reality. 'My dream may run ahead of the natural march of events or may fly off at a tangent in a direction in which no natural march of events will ever proceed. In the first case my dream will not cause any harm; it may even support and augment the energy of the working men... There is nothing in such dreams that would distort or paralyze labour-power. On the contrary, if man were completely deprived of the ability to dream in this way, if he could not from time to time run ahead and mentally conceive , in an entire and completed picture, the product to which his hands are only just beginning to lend shape, then I cannot at all imagine what stimulus there would be to induce man to undertake and complete extensive and strenuous work in the sphere of art, science and practical endeavor... The rift between dreams and reality causes no harm if only the person dreaming believes seriously in his dream, if he attentively observes life, compares his observations with his castles in the air, and if, generally speaking, he works conscientiously for the achievement of his fantasies. If there is some connection between dreams and life, then all is well.'" Lenin concludes Pisarev's long passage with the following remark: " Of this kind of dreaming there is unfortunately too little in our movement." Solzhenitsyn makes no such remarks. He lacks imagination.

Historians, who study Russia, hardly ever brush the surface of the problem the Russian revolution presents to mankind. It is insufficient to detail Stalin's rise to power with or without the inner party struggle during the 1920s. Almost no one pays much attention to the extraordinary process, especially in light of the challenges Russian revolutionaries faced from the revolution to 1927. The argument must address the fact that with the introduction of a working class into Russia, the Russian revolution arose from leaders who were able to argue to receptive workers on the basis of the labor theory of value for the truthfulness of a revolution they realized. It is therefore inconceivable that in any description of Russian history a historian fails to address whether or not the labor theory of value proscribes to the conditions before the revolution, if not to reality in general. If a historian cannot account for value, then he or she simply cannot account for the Russian revolution in the first place. Solzhenitsyn is no exception to the study of Russian history.

Soviet Military Power () • Soviet Military Power, a journal the Reagan administration commissioned to research the Soviet Union's war

---

[424] What the Soviet Military Power accomplished, supersedes what is being accomplished in the U.S. Naval College's Chinese Maritime Studies Institute's quarterly volumes. Entitled, "Maritime Geopolitics of the Belt and Road Initiative (i.e., Volume 1, Number 1 Winter 2025), the quarterly's annotations lack a number of qualities. In terms of the keyterms, the Chinese characters

economy, set the standard for analyzing military power.[424] The SMP makes no mention of the holy trinity of strategic, operations or tactics so pervasive in the doctrine of military thinking for Americans. It analyzes Russia's military power in terms of its own understanding of force. Published in 1981 (with an alternate), 1983 (with an alternate), 1984 (with an alternate), 1985, 1986, 1987, 1988, 1989, 1990, and entitled, Military Forces in Transition in 1991, the journal produced ten editions over the course of the decade before America's so-called unipolar moment. The Defense Intelligence Agency stopped working from 1991 to 2017. When the DIA resumed work, the result became Russia Military Power.

Spengler () • Oswald Arnold Gottfried Spengler (29 May 1880 – 8 May 1936), a German polymath whose areas of interest included history, philosophy, mathematics, science, and art, as well as their relation to his organic theory of history, celebrates the 90th anniversary of his death during the fourth anniversary of the Ukraine war.

Best known for his two-volume work, the Sunset of the West (i.e., Der Untergang des Abendlandes), published in 1918 and 1922, covering the course of the West's decline. Modeled against Vico, Hegel, and Marx, Sprengler's model postulates without a method that human cultures and civilizations are more like the biological entities Agent Smith denounces in the first Matrix (1999). He calls human beings "viruses" during the his interrogation of Morpheus who refused to provide him with the keys to Zion.[425]

Each with a limited, predictable, deterministic lifespan, the organisms of history live out periods like biological entities live out life. Sprengler predicted that Western civilizations would enter a period of pre-death emergency around the year 2000 with a period of Caesars (extra-constitutional omnipotence of the executive branch of government) finally terminating Western civilization in final and cataclysmic collapse.

Against views like Spengler's views of humanity, mankind must permanently object. In the unity of the class struggle, man must understand that the subjective interception of the objective forces of economy is a definitive refutation of Sprengler's solely deterministic universe.

'Spring' Counteroffensive () • The most peculiar aspect of Ukraine's 'Spring' counteroffensive, which well-known Ukrainian commanders call 'idiotic,' is just how well telegraphed its military objective became before its launch. The New York Times, well before the Jack Texeira leaks, published article after article, detailing the 'Spring' counteroffensive's military objective, telegraphing to the Russians not only the upcoming offensive but its aim. In an article published in the New York Times on

---

are omitted; although specialists have no trouble guessing the Chinese character equivalent to the pinyin, non-specialists might. The annotations contain no digressions on how these key terms relate back to the subject matter in terms of the Chinese language or characters. Whereas in the SMP the Reagan administration spared no penny for the depiction of the Soviet Union's most powerful weapons, CMSI does not have a single illustration. It is barebones. The Reagan administration's commission for illustration is one of the qualities that make the SMP an almost everlasting source of standard for the analysis of military power, air, land, or naval. Hand drawn, the illustrations are pieces of fine art; the CMSI has neither illustrations nor art. It is almost as though the editors decided to throw a handful articles together for publication. It certainly does not live up to the standard for the analysis of military power Raegan's administration set with its exceptionally high bar in the SMP. CMSI has a lot to learn from the DIA about editorial journalism.

[425] The neo-Malthusian, Paul Ehrlich, made a prediction whose concept pre-dates Agent Smith's in the 1960s with his book, The Population Bomb. Ehrlich predicted how overpopulation would deplete the Earth's resources, condemning millions to starvation, as people multiply at a geometric ratio on a food supply at an arithmetic ratio. Time, however, invalidated most of Ehrlich's predictions.

March 8th, 2023, for instance, where the authors claim "Bakhmut is [the] Mercenary Group's 'Last Stand" in Ukraine, the authors say the "campaign will likely focus on the southern region of Zaporizhzhia, where Ukraine is building up forces, [as] Col. Roman Kostenko, a member of Ukraine's Parliament who is serving in the country's military, told Ukrainian television on Monday." In another article published on March 13th, 2023 by the New York Times under the title, "Kyiv Seeking to Evacuate a Town It Controls," the logic, the authors write, is to capture "territory around Melitopol," so that "Ukrainian forces [may] sever a Russian line of control from the Crimean Peninsula to the Donbas region." On March 14th, 2023, the New York Times in an article entitled, "Russian Attacks Yield Little but Casualties in Wide Arc of Ukraine's East," repeats: "the Ukrainians, anticipating a big influx of Western weaponry and fresh troops in the coming weeks and months, are widely expected to mount a counteroffensive." The article continues: "Analysts, Ukrainian officials, and even Russian commenters have suggested that it would come on the southwestern part of the front, with the Ukrainians [attempting] a push east from Kherson and south from Zaporizhzhia toward the city of Melitopol, hoping to sever the land bridge the Russians have seized that links the Crimean Peninsula to the eastern Donbas region." Ukraine's singular goal, we are told in an another article published on March 21st, 2023 with the title, "Little Time on the Battlefield to Dwell on Notions of Peace Talks," is to bide time until Kyiv's troops retake the initiative in the war. The "moment," the authors explain, "remains unknown outside the close circle of the Ukrainian military high command." It would seem that within the span of less than two weeks in March, 2023 the New York Times exposed the Ukraine's battle plans in their entirety well outside the close circle of Ukrainian military high command. Given the amount of time from March to June, four months, the New York Times likely accomplished more for the exposition of Ukraine's battle plans than Russian intelligence itself.

Finally launched in June, the 'Spring' counteroffensive started in summer. It lasted until November 2023 when multiple Armed Forces of Ukraine (AFU) brigades failed to penetrate the Russian Surovikin line along the Orikhiv-Tokmak Axis in Zaporizhzhia Oblast. Although the Ukrainian brigades advanced approximately 20km at the cost of 518 vehicles, including 91 tanks and 24 engineering vehicles, the Ukrainians never managed to breech Russia's first line of defense on the Surovikin line.[426]

Stones () • At the height of Ukraine's crisis in artillery, a German speaking commentator, who sympathized with Ukraine's lack of munitions, declared how the Ukrainians would sooner start throwing stones than fire artillery shells at the rate the U.S.-led NATO alliance insisted European and Western nations contribute to the country's stocks. Marc Thys, pensionierter Generalleutnant und früher der stellvertretende Chef der belgischen Armee, made the statement in an interview to Bayerischer Rundfunk (BR) on February 3rd, 2024, just a few weeks before the third anniversary of the Ukraine war on February 24, 2024.

Coming on the heel of the fall of Avdiivka, one of Russia's long-sought targets in Ukraine's collapsing manifest of a defense belt in the Donbas, on January 17th, 2024, the commentators describe Ukraine's munitions not in terms of numbers but time. Published on February 29th, 2024, five days after the third anniversary of the Ukraine war, the video Ukraine-Krieg: Gehen dem Westen die Waffen aus? Describes how ”Die ukrainischen Truppen verschiessen jeden Tag Unmengen a Munition an der Front. Deutschland hat jetzt erst ein Flugabwehrsystem vom Typ geliefert und Artilleriemunition: 10,000 Schuss. Das reicht für zwei Tage. Denn die Ukraine bräuchte zwei bis 2, 4 Millionen Artilleriegranaten - pro Jahr. Das sind Schätzungen.” These measurements, which are based on Ukraine’s rate of fire for a particular weapon system, symbolize how artillery is not a matter of stones, throwing, or throwing stones but time.

[426] ["On One Key Eastern Battlefield, The Russians Are Losing 14 Vehicles For Every One The Ukrainians Lose," Forbes, 14 November 2023]

Sudan () • An unrelated war, Sudan’s second civil war began shortly before the fall of Bakhmut-Artemovsk on April 15th, 2023. Unlike Syria’s civil war or the Sahel region, Sudan’s second civil war is one of few processes in the struggle among great powers for spheres of influence in Africa with an immediate convergence with any of the processes at stake directly in the continued Ukraine war. It has remained for better or worse a primarily isolated conflict in northeastern Africa. Bordered by Egypt to the north, the Red Sea to the northeast, Eritrea and Ethiopia to the east, South Sudan to the south, and Chad, Libya, and the Central African Republic to the west, Sudan could easily become entangled in the sprawling network of African conflicts. Situated at the junction of the Blue Nile and White Nile rivers, the capital, Khartoum, is at one of the most important river ways in Africa.

Summers, Larry () • Larry Summers, a publicist, PhD in economics, is one of the many unfortunate victims of the talented Mr. Epstein’s exceptional gift for manipulation. Just like Harvey Weinstein, Summers is a Jewish man, whose Jewish identity has made him subject of persecution. It is primarily odium, rancor, repugnance at the sacred gift the scripture conferred upon the Jews that motivates people like prosecutors to selectively persecute Jewish males from the population. Summers is one of those males. Epstein collected a bunch of gorgeous young women the likes of Eve, naked, adored with nature’s most voluptuous gifts, full of burly wisdom, could not but have envied. Epstein trained these underage women, turning them into exceptionally seductive vixens with especially well developed skills for seducing older men, especially Jewish men. If an old man was bald, Epstein taught these seductive vixens to play on the vulnerability an old man’s hair loss exposed to his ego. He taught the seductive vixens to make old Jewish men to feel like hairy young men. With these seductive vixens, Epstein managed to subdue an old Jewish man like Larry Summers. It is clear that Epstein targeted Summers for the role Summers played at Harvard. What Epstein achieved through the old subdued Jewish man is yet to be revealed.

Surovikin, Sergey () • Sergey Surovikin, the Commander-in-Chief of the Russian Aerospace Forces from 2017 until he was reportedly sacked by Vladimir Putin, oversaw the battle of Bakhmut-Artemovsk from the withdrawal of Russia’s armed forces from Kherson to the east bank of the Dnipro to the construction of the most famous Surovikin line, stretching from Belarus, a contractor for Russia’s defense industry specialized in repair, maintenance, and restoration[427], to the Dnipro delta. Appointed to the overall command of the Donbas theater immediately after Ukraine’s great 2022 Kharkiv counteroffensive launched on September 6th, 2022, Surovikin began construction of the complex network of defenses immediately. In its concluding remarks on an analysis of the Surovikin lines, the Center for Strategic and International Studies stated: ”Russia has constructed some of the most extensive systems of military defensive works seen anywhere in the world for many decades."[428] Composed of layers of defenses such as minefields, dragon's teeth[429], anti-tank ditches, trenches, pill boxes, and other barriers designed specifically to entrap the incoming Ukrainian 'Spring' counteroffensive, the construction of the Surovikin lines relayed heavily a Russian advantage in equipment. The Russian BTM-3, a high speed, tracked, trench-digging vehicle based on a heavy artillery prime-mover chassis, digs trenches several feet deep. It is capable of digging 800 meters of man-sized trench in one hour in 3rd gear. The minimum radius is 25 meters. The Russian BTM-3, whose implementation in the construction of the Surovikin line exceeds all other equipment, is unparalleled; few, if any other nations, have vehicles such as these.

---

[427] [המערך הצבאי של בלו רוסיה הפך לעורף הלוגיסטי של הצבא הרוסי הנלחם באוקראינה. משפץ מטוסים, טנקים, מערכות כ״מ ומכ״ם שנפגעו במלחה. תיק דבקה, אוג 22, 2022]

A Russified response to warfare on the eastern front, the Surovikin line recalls the networks of fortifications the Russians utilized throughout the more than three centuries of warfare preceding the Ukraine war for protecting the road to Moscow. A series of ten redoubts, defensive earthworks, designed to trap the Swedes in marshes during the battle of Pultova in 1709 is the first. The great redoubt at Borodino[430] constructed under the auspices of one of Russia's most colorful generals, Mikhail Kutuzov, whose famous ability to defeat enemies, especially the Turks, in retreat cemented his preeminence in annals of Western warfare, upset Napoleon Bonaparte's bid to compel the Russians to capitulate in 1812. The earthworks one of Leon Trotsky's subordinates, Georgy Zhukov[431], one of the greatest Russian and Soviet military leaders of all time, built to prepare the Russian victory against the Nazis at Kursk on July 5th, 1943 is the third. Surovikin's construction of a major defensive network of earthworks thus places his generalship firmly and thoroughly within the line of the great Russian generals of the 18th, 19th, and 20th century. It is no wonder that Vladimir Putin sacked Surovikin, for Surovikin's preeminence unquestionably rivals all others in Russia right now, including Sergei Shoigu, Valery Gerasimov, and any other member of the Russian ставка, not to mention Russian politicians.

SpaceX () • SpaceX is one of the many "emergency" Initial Public Offerings the financial ruling elite scheduled after the price of gold rose to more than 5, 000 dollars. Aware of the impending crash the collapse of the dollar will cause to American stock markets, the ruling elite began to scramble for new ways to extract money from unsuspecting citizens who are unaware of what is happening. Alongside Ledger's own IPO, these rushed, emergency IPOs provided expression to the panic rich billionaires feel at the estimated loss of wealth the great financial crisis of the millennium[432] will cause.[433]

---

[428] ["Ukraine's Offensive Operations: Shifting the Offense-Defense Balance," CSIS, June 2nd, 2023.]

[429] [أسنان التنين تكتيك روسي "قديم" لصد الهجوم الأوكراني المضاد ،العربية، : ٢٩ يوليو ٢٠٢٣]

[430] On September 8th, 2022, the first year of the Ukraine war, the battle of Borodino celebrated its 210th anniversary. One of Russia's most famous generals, Kutuzov, a general who slept through staff meetings, drank alcohol heavily, enjoyed maidens, led Russia's army against Napoleon's Grande Armée in the bloodiest single-day battle of the 1812 war. Napoleon, who had already lost his hand at the table, refused to roll the dice with his Imperial Guard, relinquishing his affinity for Caesar. Caesar famously rode straight into battle with a purple cloak, rallying his legions against the Gallic hordes at the battle of Elysium, risking all to win all or lose all. Napoleon's hesitancy at Borodino with his Imperial Guard represented the tipping point on the battlefield, ultimately leading to Napoleon's defeat.

[431] The Great Commanders (2003), an award winning expert portrait of six men, places Zhukov after Alexander the Great, Julius Caesar, Horatio Nelson, Napoleon Bonaparte, and Ulysses S Grant.

Switchblade () • The American Switchblade-300, Dead-on-Arrival on the Ukrainian battlefield, is an example of the Western belief in its superior firepower. Essential kit for America's special forces in Iraq and Afghanistan, the Middle East, the Switchblade-300 demonstrated its obsoletion in a way reflective of the times. As opposed to other types of weapons, a drone's effect is in its destruction; hence a drone's ability to disrupt, damage, or destroy a target must outweigh not only this but its own cost by an order of magnitude many times greater. The Switchblade-300, whose production facilities are overseas, costs many times more than an average FPV drone but without an immunity to Russia's electronic warfare. In an article published on October 23rd, 2025, Viktor Dolgopiatov, who heads Burevii, a design bureau pioneering [an] emergent class of [weapons],the "average ground drone (UGV) in Ukraine, for example, has a life expectancy of just one week."[434] With a lifespan far shorter than expected for the Switchblade-300, the weapon suddenly became obsolete.

The rapid evolution of drone warfare prompted the U.S. Army to take note of its obsoletion. In February

---

[432] It is reasonable to call the impending crash the great financial crisis of the millennium just based on the sheer magnitude of the numbers. It is estimated that most of all or nearly all fiat currencies in countries whose monetary policy relied on private central banks (i.e., independence for the bankers but enslavement for everyone else) have lost more than 90 per cent of their purchasing power over the lifespan of their circulation. The U.S. dollar, for instance, has lost nearly 98 per cent of its original purchasing power, becoming closer to a penny than the dollar for which its lowest denominated note denotes.

America does not have at its disposal a comparable store of value for the amount of money China has consistently generated over the past three years. The dollar doesn't tell us anything. It is clear that against the backdrop of the dollar's lost purchasing power, the Federal debt's indebtedness at 40 trillion underscores how far the U.S. trade deficit with China over the past three years has come in real numbers. If U.S. gold reserves are equivalent to 8,133.46 metric tons (i.e., 655,000 gold bars at 400 troy ounces a bar where a troy ounce is worth no less than 5,002.50), the U.S. trade deficit in comparison to China's trade surplus is double the entire lot of America's gold reserves of gold bars in 2023, 2024, 2025. The gap from America's trade deficit to China's trade surplus is thus equivalent to 1, 200, 000 gold bars. It means that in terms of one of the rising stores of value available for comparison, the wealth of the Chinese nation generates double the gold equivalent of all of America's gold reserves every year for the past three years. If you compare the gold equivalent to the amount of money separating America's trade deficit in 2025 from China's trade surplus in that year to the sum of America's gold reserves at the time the United States established the new monetary system at the Bretton Woods Conference, held in Bretton Woods, New Hampshire from July 1st to July 22nd, 1944, the difference could not be any less startling. When the conference convened, the United States maintained two thirds of the world's supply of gold reserves. The difference from today to the Bretton Woods Conference demonstrates in terms of gold alone how America's status as a global superpower has by so many degrees thus diminished. It is clearly no longer but a competitor for great power to the World's Superpower, China.

Compared the Federal debt, America's situation worsens. If America's gold reserves at 8,133.46 metric tons is equivalent to 655,000, America's gold reserves represent less than 3.25 per cent of the total amount of the more than 19, 980, 010 gold bars required to equal the amount of Federal debt the U.S. owes. It is less than one thirtieth by half a tenth. If the Federal debt cannot exchange a store of value in gold for more than 96.5 per cent of the Federal debt, the lack of exchange for the dollar threatens the dollar with collapse. It could be that an amount of wealth, value, or dollars in the U.S. economy equivalent to the amount the U.S. cannot guarantee with gold may be threatened with destruction in a financial crash. If so, the loss of more than 40 trillion dollars worth of wealth to accompany the same in debt or the equivalent of 20 to 40 million gold bars would certainly be the great financial crisis of the millennium, since no equivalent sum in the history of mankind has ever evaporated in a financial crash.

[433] In an article published on Monday, July 27th, 2026, CNBC stated: "SpaceX has now lost the equivalent of a full Tesla in market capitalization." In the article, the author explains how SpaceX erased more than 1.2 trillion in market cap since its high price of 225.64 in June after the IPO–almost exactly the value of Elon Musk's other company, Tesla, whose shares fell to near one-year lows. On Monday SpaceX fell for the 13th session of the last 16, shedding more than 1 percent to end at 113.50.

[434] ["Western drones are underwhelming on the Ukrainian battlefield," The Economist]

2022, the U.S. Army issued its first notice, requesting sources to supply Switchblade 300s, perhaps indicating a desire to strike a balance in a cost benefit ratio. In November 2022 the Army issued its second notice, submitting a Request for Information (RFI) on loitering munitions, directly referencing the conflict in Ukraine, which "has clearly demonstrated the ability of unmanned systems at increasingly lower echelons of employment," especially for "[delivering] lethal effects."

In contrast with the Shahed, whose versions, modifications or models are studied in detail by both sides, the United States has not developed a loitering munition with a degree of intensity comparable to the Russo-Iranian project's emphasis on iteration.

Syntopicon () • Syntopicon, whose 70th anniversary coincided with the outbreak of war in the Ukraine, is one of the greatest syntheses of the greatest ideas in the Western World. Published initially in 1952, the second edition issued in 1990. The syntopicon is represents the second and third volumes of a 54 volume set of a collection of the Western World's greatest books.[435] The syntopicon is a synthesis of the topics found in those books, introduced with a standardized introduction a single author wrote for no fewer than 102 articles on the Great Ideas of Western Civilization.[436] Aiming to be comprehensive of Western thought, ordered alphabetically, from Angel to World, the syntopicon misses much. The list, for instance, omits much of mathematics; the ideas of shapes, numbers, symmetry, sets do not appear in the list.[437] There are entries for aristocracy, constitution, democracy, government, justic, law, oligarcy, opposition, punishment, war, peace, wealth, the lost of which may fall under idea of politics but no entry for politics. If ever there needed to be a starting point for a list of the greatest ideas of the Western World, the syntopicon succeeds fully. The arduous process of indexing the ideas as they occur throughout the volumes took place before the era of computers, consuming no less than 400,000 man hours; the work represented a major undertaking the likes of which computers have been trained nowadays to overcome within minutes, if not seconds. The syntopicon is thus a great feat in the history organizing ideas. The syntopicon's 70th anniversary therefore revives the great Western alphabetic index.

---

[435] The first volume is The Great Conversation. The second is The Great Ideas I; the third is The Great Ideas II; the fourth is Homer; the fifth is Aeschylus, Sophocles, Euripedes, Aristophanes; the sixth is Herodotus and Thucydides; the seventh is Plato; the eigth is Aristotle I; the ninth is Aristotle II; the tenth is Hippocrates and Galen; the elevenths is Euclid, Archimedes, Apollonius, Nicomachus; the twelfth is Lucretius, Epictetus, and Marcus Aurelius; the thirteenth is Virgil; the fourteenth is Plutarch; the fifteenth is Tacitus; the sixteenth is Ptolemy, Copernicus and Kepler; the seventeenth is Plotinus; the eighteenth is Augustine; the nineteenth is Thomas Aquinas I; the twentieth is Thomas Aquinas II, the twenty first is Dante; the twenty second is Chaucer; the twenty third is Machiavelli and Hobbes; the twentyfourth is Rabelias; the twenty fifth is Montaigne; the twenty sixth is Shakespeare I; the twenty seventh is Shakespeare II; the twenty eighth is Gilbert, Galileo and Harvey; the twenty ninth is Cervantes; the thirtieth is Francis Bacon; the thirty first is Descartes and Spinoza; the thirty second is Milton; the thirty third is Pascal; the thirty fourth is Newton and Huygens; the thirty fifth is Locke, Berkeley and Hume; the thirty sixth is Swift and Sterne; the thirty seventh is Fielding; the thirty eighth is Montesquieu and Rousseau; the thirty ninth is Adam Smith; the fortieth is Gibbon I; the forty first is Gibbon II; the forty second is Kant; the forty third is American State Papers, the Federalist and J.S. Mill; the forty fourth is Boswell; the forty fifth is Lavoisier, Fourier, and Faraday; the forty sixth is Hegel; the forty seventh is Goethe; the forty eighth is Melville; the forty ninth is Darwin; the fiftieth is Marx and Engels; the fifty first is Tolstoy; the fifty second is Dostoevsky; the fifty third is William James; the fifty fourth is Freud.

[436] The first Syntopicon I, Volume 2, contains entries on the following: Angel, Animal, Aristocracy, Art, Astronomy, Beauty, Being, Cause, Chance, Change, Citizen, Constitution, Courage, Custom and Convention, Definition, Democracy, Desire, Dialectic, Duty, Education, Element, Emotion, Eternity, Evolution, Experience, Family, Fate, Form, God, Good and Evil, Government, Habit, Happiness, History, Honor, Hypothesis, Idea, Immortality, Induction, Infinity, Judgment, Justice, Knowledge, Labor, Language, Law, Liberty, Life and Death, Logic, and Love The second Syntopicon, Volume 3, contains entries on the following: Man, Mathematics, Matter, Mechanics, Medicine, Memory and Imagination, Metaphysics, Mind, Monarchy, Nature, Necessity and Contingency, Oligarchy, One and Many, Opinion, Opposition, Philosophy, Physics, Pleasure and Pain, Poetry, Principle, Progress, Prophecy, Prudence, Punishment, Quality, Quantity, Reasoning, Relation, Religion, Revolution, Rhetoric, Same and Other, Science, Sense, Sign and Symbol, Sin, Slavery, Soul, Space, State, Temperance, Theology, Time, Truth, Tyranny, Universal and Particular, Virtue and Vice, War and Peace, Wealth, Will, Wisdom, and World

[437] The lack of an entry in the syntopicon for geometry in the first edition from 1952 ultimately led to the removal of Apollonius' Conic Sections from the second edition in 1990, even though one pillar on the ruins of Aristotle's cosmology arose from Kepler's exploitation of the ellipsis Apollonius' Conic Sections demonstrate. The disregard for geometry thus had profound implications for the syntopicon's foundational assumption; if the Great Books of the Western World preclude Apollonius through a progression from the first to the second edition, the progression unveiled a regression. The Great Books turned away from Kepler's revolution towards Aristotelian

Syria (Syr · ia) Noun • The collapse of Syria's Assad regime, a fifty year old dynasty, is a result of the Ukraine war. Unique among the results of horizontal escalation, the collapse of Syria's Assad regime is a coalescence of processes arising from the Arab Spring with those of the Ukraine war.

Al-Sharaa, an extremely clever Arab, trained a special division of his troops in drone warfare shortly before he launched his lightening offensive from Aleppo to Damascus, indicating how an element of the Ukraine war (ultimately derived from the Azerbaijanians in the Nagorno-Karabakh war over Armenia[438] complimented others such as the withdrawal of Russia's Private Military Company, Wagner, from Syria.[439], both a result of Russia's full-scale invasion. While coverage on Al-Sharaa's lightening offensive is scant, if not brief, other elements receive a great deal of attention in the newspapers. In the mainstream Israeli press, the newspaper, Maariv, published a series of articles detailing how nearly twelve months before the collapse of Syria's Assad regime Iran began to reduce its presence in the country.

T

İbrahim Tatlıses () • İbrahim Tatlıses

İbrahim Tatlıses (born İbrahim Tatlı in 1952) is a Kurdish folk singer, actor, and television host, whose signing in Turkish has raised the profile of music in the Middle East not only for the Kurds first of all but for Turkey. Widely known by the nicknames "İbo" and "İmparator" (Emperor), İbrahim Tatlıses has produced 42 albums over the course of his career within the ambit of the pop Arabesk genre. İbrahim Tatlıses's first language is Kurdish. His second is Arabic. His last Oriental language is neither Kurdish nor Arabic but Turkish.

tank () • During the Ukraine war, commentators from the military, the news, research institutes, intelligence agencies or elsewhere subjected the tank to the greatest sense of disbelief since its inception for overcoming "No Man's Land during WWI." None but the Russian T-72 emerged from the disastrous battlefield of analytical criticism with an award for its design, durability, or dependence

Taiwan () • Taiwan’s straight in the South East Chinese Seas is one of the major economic thoroughfares on the Pacific high seas.

to temper () • In his famous book, The Prince, Machiavelli asked on which side of a scale containing one of two animals the challenge for a ruler ruling over people weighs most heavily according to a given situation. On one side, Machiavelli sets the fox. On the other side, the lion. The weaker of the two is supposed to represent cunning without strength. The stronger of the two brute force with intelligence. According to Machiavelli, a prudent ruler must be adaptive, changing to new situations, as problems arise, acting as a fox ”in order to recognize traps” and as a lion when he has no choice but to ”frighten off wolves.” Machiavelli argues that the lion, the one symbolizing strength over intelligence, ”is defenseless against traps” while the fox, the one symbolizing cunning over brute force, ”is defenseless against wolves” and other physical threats; an effective ruler draws on the necessary, though not mutually exclusive, attributes of these great beasts, to keep his crown.

It would not be fair to dismiss Machiavelli’s analogy outright for imprecision but no analogy escapes reality unscathed; Machiavelli’s is no exception. What is a trap? Who lays traps? Who benefits from traps? Is there not room for a hunter? [441]

It is clear that Machiavelli’s understanding of the scales of beastliness or animality is nothing but to be contained in the eye of the arbiter elegantiarum. An example is an elegant debate. A trap laid for the public, the two jaws of the foot piece, designed to catch the minds of readers, came in the form of a measure designed according to its counter-measure, the two corresponding momentanae.

The article published on April 12, 2024 by the New York Times under the title ”The Math on Ukraine Doesn’t Add Up” (the measure) was written so as to be a measure for its pre-existing counter-measure. Senator Roger Wicker’s memo entitled, ”Production is Deterrence,” with a publication date on April 22nd, 2024 is the pre-existing counter-measure. With the measure before its counter-measure appearing sequentially, the Republican Senators, J. D. Vance and Roger Wicker, successfully tempered a trap for swaying American public opinion about ”the math” on a range of issues related to Ukraine’s war matériel away from disapproval to support for funding. The math, which adds up in Senator Roger Wicker’s memo, doesn’t in J. D. Vance’s article but publishing the latter before the former allows for latter to appear as a refutation. The refutation, however, was designed according to what was to be refuted well ahead of time. Senator Roger Wicker thus tempered V. D. Vance to publish his article before his memo.

Since the American public is never informed about the backroom discussions centering on or the creation, revision, or conversations with newspapers about, these documents, the sequential nature of forming the measure according to a pre-existing counter-measure is entirely concealed from the public's eyes, just like a hunter's trap is concealed from a fox's or lion's feet. Out of sight, out of mind. Machiavelli's analogy is thus a great starting point for identifying the humanistic aspects of governance. Why would any one have any need for speechless beasts when so much is clear from speech alone?

---

[441] In his unparalleled contribution to the study of being in the Metaphysics, Aristotle, for instance, criticized Socrates’ theory of the forms by virtue of the third man; if man is man by virtue of his participation in the form of man, a second form for participation is required. A third form relating the form for participation to that of the participant is thus required. The process continues ad infinitum. Socrates’ theory of the forms thus becomes a wind egg. (c.f., Theaetetus 161a) Is there no third man argument by which great philosophers like the Jewish monotheist, Aristotle, might make to undermine analogies like Machiavelli’s? Is it not plausible to imagine a hunter behind the scenes of the fox and the lion?

Passage of the funding sailed through the two houses of congress onto President Biden's lap in no time.[442] While the Republicans passed funding for Ukraine's war matériel, funding made no apparent difference, as the Ukraine failed to change the status quo ante on the battlefield in any noticeable way. None of the Ukrainian newspapers, such as the Kyiv Independent or *Українська правда*, published articles, describing how the newly passed aid for Ukraine or its new war matériel made much of a difference.

The problem is neither the hunter nor the trap but the fact that for the most part the animals never really realize what being trapped truly means. The failure to realize one is trapped is related almost exclusively to the fact that trap's objective is less to trap than to reinforce entrapment. The design of opposites, the counter-measure for the measure, ensnares people into thinking that these opposed points of view are really an opposition. The fact of the matter is that beyond the symmetrically designed teeth on opposite ends of a trap is a far greater wonder to behold. It is logic.

Temples & Time () • Human beings centralize activity to a specific place to celebrate a specific time. In the USSR, for instance, Soviet citizens celebrated Soviet leadership in the fight against fascism in the Red Square annually on May 9th, the day the Soviet general, Zhukov, crushed without much help at all from the U.S., Great Britain or Canada, all of which delayed a land invasion for years, the Nazi juggernaut in Berlin, well before the allies arrived. The Chinese celebrate China's National Day on October 1 every year in Tiananmen Square, marking the founding of the People's Republic of China in 1949, while many Chinese silently celebrate the courageous Chinese citizens who defied China's crackdown against protesters June 4 protesters commemorating the 1989 tragedy. These examples demonstrate how celebrations not only coincide with time but place. [TO DO]

10BEIJING327_a () • In a diplomatic cable Wikileaks (See Wikileaks) published from April 28th, 2009 suggests that China consistently implemented a comprehensive strategy targeted at America's insistence on a global Hamiltonian monetary policy. In the cable numbered 09BEIJING1134_a, the author, PICCUTA, who appears to be no more than an open source analyst with an expertise in Chinese tasked with reading Chinese newspapers, quotes in section (3) the China Radio International sponsored newspaper World News Journal (Shijie Xinwenbao)(04/28) as writing the following: "China's National Foreign Exchanges Administration China's gold reserves have recently increased. Currently, the majority of its gold reserves have been located in the U.S. and European countries. The U.S. and Europe have always suppressed the rising price of gold. They intend to weaken gold's function as an international reserve currency. They don't want to see other countries turning to gold reserves instead of the U.S. dollar or Euro. Therefore, suppressing the price of gold is very beneficial for the U.S. in maintaining the U.S. dollar's role as the international reserve currency. China's increased gold reserves will thus act as a model and lead other countries towards reserving more gold. Large gold reserves are also beneficial in promoting the internationalization of the RMB.”[443]

[442] ["US House approves 61bn in military aid for Ukraine after months of stalling," The Guardian, April 20th, 2024]; ["What the US Congress passed to aid Ukraine, Israel and Taiwan," Reuters, April 23rd, 2024]; ["US Congress passes Ukraine aid after months of delay," Reuters, April 23rd, 2024]

In a later diplomatic cable numbered 09BEIJING1134_a from February 10th, 2010 Wikileaks published legally on its website, a foreign service worker from the U.S. Embassy named Huntsman, who appears to be no more than an open source analyst with an expertise in Chinese tasked with reading Chinese newspapers, describes in section (b) how the Shanghai-based Shanghai Media Group (SMG) publication, China Business News (Diyi Caijing)(02/08) (pg A7) claims: ”A crucial move for the U.S. is to shift its crisis to other countries - by coercing China to buy U.S. treasury bonds with foreign exchange reserves and doing everything possible to prevent China’s foreign reserve from buying gold. The nature of such behavior is a rogue lawyer’s behavior of ’ripping off both sides’: taking advantage of cross-strait divergences, blackmailing the Taiwan people’s wealth by selling arms to Taiwan, and meanwhile coercing China to buy U.S. treasury bonds with foreign exchange reserves and extorting wealth from the mainland’s people. If we [China] use all of our foreign exchange reserves to buy U.S. Treasury bonds, then when someday the U.S. Federal Reserve suddenly announces that the original ten old U.S. dollars are now worth only one new U.S. dollar, and the new U.S. dollar is pegged to the gold - we will be dumbfounded.[444]Today when the United States is determined to beggar thy neighbor, shifting its crisis to China, the Chinese must be very clear what the key to victory is. It is by no means to use new foreign exchange reserves to buy U.S. Treasury bonds.”[445]

Tiananmen Square, 1989 () •

”a tiger by the tail” () • Economist Friedrich Hayek, whose much celebrated book The Road to Serfdom (1944) condemning how central economic planning inevitably leads to totalitarianism with the loss of individual liberty now applies to the current Stalinization of the American economy,[446] famously described a situation in which central banks become embroiled when a central bank must decide whether the debasement of the currency is perferred over a sovereign default (i.e., a crack up boom). It is only within the nationalist framework rather than the globalized economy that the Austrian Business Cycle Theory's so-called "crack up boom," however, applies to an economy from the past (i.e., such as the Weimar Republic). Not only has the economy changed but economics itself has transformed.

---

[443] These three claims proceed without explanation. The newspaper does not explain how the U.S. and Eupore suppress the rising price of gold. The newspaper does not provide an example. It does not point to a day, time, event or person whose actions contributed to a situation where gold did not rise when economists, traders, investors, or others might have thought otherwise. It is exceptionally vague. Although the statement points to a motive (i.e., competition for the status of global reserve currency), the statement is still hardly conscious. It does not explain why the U.S. or Europe seek preeminence for the U.S. dollar over gold for international trading. It does not contain a statement, indicating that the global reserve status for international trading in a specific currency confers a benefit. It does not explain what the benefit might be.

[444] Without any mention of the 2008 Great Financial crisis, the U.S. Federal Reserve, the Federal Reserve Chairmans, ”quantitative easing,” the M2 Money Supply, inflation, or debasement, the prediction that the US dollar would lose more than nine tenths of its original value, albeit exceptionally vague, is, nonetheless, understandably prescient in hindsight. With the passing of the successive anniversaries the Ukraine war celebrates, gold, against which the U.S. has absolutely no plans to peg, continues to rise, as the quantity of commodities with which the dollar is exchanged continues to fall. It is certainly not an accurate prediction of the new world order the death of the collapsing dollar heralds, since the prediction contains nothing in the way of the gold clearing house China established on June 24th, 2026 during the Fourth Anniversary of the Ukraine war. It contains nothing about the subsequent rise in the price of gold.

It does not provide a Marxist critique of the mechanism by which the US Federal Reserve extracts surplus value. It reveals that the Chinese harbored fears about the devaluation of the dollar against a revival of a gold standard. It suggests that Chinese intelligence fundamentally misunderstood the role of US Treasury bonds. It suggests that China sought to purchase gold not for the sake of a new world order based on a gold standard but on the fear that a gold standard might undermine China’s foreign exchange reserves in US dollars, should the US adopt a gold standard secretly without any announcement. If so, then China’s ambition to establish a new world order is far more a response to the failures America’s insistence on a Hamiltonian monetary policy cause than on any farsighted Chinese vision of a new world order.

[445] See 04RANGOON675_a ”for illegal Chinese investments in gold” (May 27, 2004), 04TAIPEI3142_a for ”Central Bank of China” (October 8, 2004)

[446] The subordination of the Federal government to finance capital has allowed for the American

Rooted in division of world economy into nation-states seeking to subordinate one or all others to the interests of capitalist ruling class of that nation for not only for exploitation of its markets, resources, currency, or trade routes but its workers, the globalized economy, although at the latest stage of imperialism, has so expanded through financialization that none of Ludwig von Mises [447]theories from Austria apply now to the world, let alone the United States. The United States transformed the global economy through financialization, establishing on July 22nd, 1944 the Bretton Woods Conference, which allowed the interests of the bourgeoisie from different nations to become subordinated to those of the United States by way of the dollar. The establishment of a SWIFT (Society for Worldwide Interbank Financial Telecommunication) a global secure messaging network established after the end of the dollar-gold-convertability on August 15th, 1971, followed the establishment of the Petrodollar, an oil backed rather than a gold standardized dollar. Headquartered in Brussels, Belgium, the SWIFT system spearheaded the initiation of global financialization on a scale or scope incommensurate with anything imaginable within the abstract, ideal, nationalist framework in which Ludwig von Mises envisioned the validity of his theory. The dollar became not only the world's "reserve currency," an aspect unex-

---

ruling elite to plan further enrichment for the rich with a greater degree of impoverishment for the impoverished, indicating how "centralized planning," far from an exclusively communist concept, is an inevitable outcome of the capitalist system where the ruling elite socialize losses for privatized profits. The period from the beginning of the Ukraine war, whose successive anniversaries mark an ever steeper descent in America's decline, through the Fourth Anniversary is a reflection of the degree to which "centralized planning" in the hands of the American ruling elite has resulted in a great degree of misery for working people with a great deal of wealth for the wealthy.

After President Donald J Trump's decision to launch an illegal war of aggression on Iran began on February 28th, 2026, Americans quickly witnessed a rising price for oil, gas, or diesel. According to at least one estimate, an estimate made almost immediately after Trump's decision claimed Americans were on track to spend nearly three fourths of a thousand dollars at a time when a comparison of a basket of goods from 2020 to that of 2026 indicated a 55.6 per cent decline in the exchange value for the US dollar, according to Forbes. ["Here's How A Typical Bag Of Groceries In 2020 Costs," Forbes. May 15th, 2026.] Unable to buy more groceries with less money, Americans paid more money for less gas. These developments contrast sharply with those of factions within the American ruling elite in possession of the petroleum sector of America's economy. According to CNN International, "Six of the world's biggest fossil fuel companies are on track to make almost 3,000 in profits every single second this year, according to a new report, as households across the world grapple with soaring energy prices and inflation, which are driving a cost-of-living crisis." ["GIANT FOSSIL FUEL COMPANIES MADE ABOUT 12,000 IN THE TIME IT TOOK YOU TO READ THIS HEADLINE," CNN International. April 27th, 2026].

While Americans were on track to spend 720 dollars this year alone, oil companies were on track to earn an 3,000 dollars a second. The contrast demonstrates not how "inexplicable," " miraculous," "pre-ordained" profits are but how profitable factions within the American ruling elite in possession of the petroleum sector of America's economy earn more profit, while impoverished American workers become more impoverished. It is thus obvious that America's ruling elite centrally planned the illegal war of aggression against Iran to further enrich the rich. ["Trump attends Houston lunch to ask oil bosses for more campaign cash," The Guardian. May 22nd, 2024]

[447] See "Ludwig von Mises"

plored within Ludwig von Mises's theories, but the foremost instrument for liquidity, transactions, or settlements from one end of the world to the next. None of the Austrian economists envisioned the German mark, which could not be commensurate with the task in the first place, to be a lynchpin for the global monetary system.

Time (Ti · me) Noun • It is to be determined which of the most prized possessions in warfare, time or space, the belligerents seek or exploit at any given phase of the Ukraine war. Neither, both of which most analysts measure by clock or ruler, are a matter of minutes, seconds, hours, days, weeks, months, or years or inches, feet, yards, or miles but of a more profound concept as germane to war as weapons.

Tutankhamen () • Tutankhamen

Turtle () •

trade surplus, China's () • During the second anniversary of the Ukraine war, China, the world's second largest economy, shocked the world in 2024 when it announced a surplus from trade exceeding 990 billion dollars, beating a previous record from 2022 (i.e., the first year of the Ukraine war). China, however, beat the 2024 record in 2025. China's trade surplus in 2025 exceeded 1.2 trillion dollars, despite Donald J Trump's tariffs.[448] Tariffs imposed by President Trump on China accomplished little, causing Chinese exports to the United States to drop by nearly a fifth.[449]

China's 2025 trade surplus stands in direct contrast to the U.S.'s trade deficit. In a first of its kind correlation, the U.S. trade deficit is more or less equivalent to China's trade surplus with neither country affecting the balance much at all. The correlation is a historic correlation in the history of economics. Never before in the history of mankind, let alone economics, have two rival economies, the first but with a trade deficit, the second but with a trade surplus, met at a single figure as high as the figure for 2025. Compounding the problem is that China's trade surplus in factory goods alone is much larger as a share of its economy than that of the United States immediately after World War II when most of the likely competitors were in ruins; it is also so during the early years of Worl War I when the United States peacefully churned out civilian goods while more than six European nations battled to transform the subversion of or more competitors into a stepping stone for its own global dominance. China's trade surplus in manufactured goods now exceeds a 10th of the country's entire economic output. The result has been the creation of millions of jobs in China with factory closures or layoffs in other countries like Germany. China's production of electric vehicles has shattered the German automotive industry. In the face of Chinese competition, Volkswagen, one of Germany's most iconic automotive brands, second only only to Toyota Motor in the number of cars it sells globally, closed a plant in Dresden after 24 years. Volkswagen's woes mirrored those of the German economy, which shrank in 2023 and 2024 and has been stagnant in 2025.[450] Statistics such as these indicate that for intents and purposes, the United States cannot meet or beat China's economy. It is a sign of the times that the correlation indicates the upward trajectory of China's economy against the downward trajectory of the United State's.

---

[448] China met Trump's threat to impose tariffs as high as 145 per cent on Chinese goods with its own levy on the export of rare earths; China's a dominant player in rare earths. Capable of monetizing the extraction of inaccessible elements, China's ability to process extracts for sale is unrivaled. The crisis led to a one-year truce after a summit in South Korea in October, 2025.

[449] ["China's Trade Surplus Reaches a Record of Nearly 1 Trillion," New York Times January 12th, 2025], ["China's Trade Surplus Climbs Past 1 Trillion for First Time," New York Times. December 7th, 2025], ["How China racked up a 1tn trade surplus," Financial Times. December 11th, 2025], ["China blames US for trade imbalances as surplus hits record 1.2tn," Financial Times. January 14th, 2026], ["China Announces Record Trade Surplus as Its Exports Flood World Markets," New York Times. January 14th, 2026]

[450] The situation with China thus highlights how the uneven results "a revolt of the forces of production" elicit for the world economy. In his book, Bolsheviki and World Peace, Trotsky wrote how "World production revolts not only against the confusion produced by national and state divisions but also against the capitalist economic organization, which has now turned into barbarous disorganization and chaos." (1918) The increase in jobs in China led to the loss of jobs elsewhere. China's plans for its economy upbraided those of other economies, creating disorder.

The United States appears to be oblivious. While the United States is pouring hundreds of billions of dollars into what are nothing more than police State activities, China is outperforming the U.S. economically. Activities such as the purchase of contracts with Palantir, the dispatch of Immigrations, Customs and Enforcement officers to Minnesota,[451] paying Federal agents from the Socialist Equality Party to write screeds or publish propaganda on the World Socialist Website or the Central Intelligence Agency paying high school students " to hack" innocent American citizens' computers for the agency's own personal gratification demonstrate America's commitment to oppression at a time of economic woes. Just as China is beating the United States economically every day, day in, day out, America's decision to burn cash on the political persecution of its citizens rather than invest in the entrepreneurial spirt of American innovation, discovery, or invention is rebounding. It is clearly a major turning point in its history. Whereas in the years following the post-World War II economy America prospered, the United States began to degenerate after 1973. In the intervening fifty years, the United States quelled protests the Federal government did not intentionally inspire such as those inspired by the Vietnam war or the desire for equality. In contrast to those

---

While one economy produces the largest trade surplus in history, another slumps. One economy's tariffs may have a negative impact on another but no positive impact on the one. ["Volkswagen May Close German Plants for First Time in Its History," New York Times October 30th, 2024], [" Volkswagen to End Production at German Plant, a First in Company History," New York Times. December 16th, 2025], ["Volkswagen Suffers More Than Rivals From Auto Industry Woes," New York Times January 10th, 2026]

[451] The United States leverages the full cooperation of every member of the Federal government to orchestrate media spectacles. In terms of the media spectacle in Minnesota, the Federal government has intentionally exploited loopholes in the structure of Article III to induce psuedolegal points of temporary authority for suspending individual or citizen rights illegally. Called "Kavanaugh stops," ICE agents are subjecting Americans to unlawful stops without reasonable suspicion in Minnesota. The stops are illegal. In one immigration lawyer's analysis of Justice Brett Kavanaugh's footnotes in two separate opinions on socalled "Kavanaugh stops," one an earlier, another a later opinion, Kavanaugh at first allows the practice of stopping people without reasonable suspicion only to prohibit the practice later. In an opinion under the caption, DONALD J. TRUMP, PRESIDENT OF THE UNITED STATES, ET AL. v. ILLINOIS, ET AL. from December 23rd, 2025, Kavanaugh denied an Application for a Stay where Kavanaugh clarifies his earlier position in footnote number 4 (Docket No. 25a443; Date Filed: 10/17/2025; 7th Circuit; Order on December 23rd, 2025 from the OT in 2025.). The first footnote came from an opinion under the caption, KRISTI NOEM, SECRETARY, DEPARTMENT OF HOMELAND SECURITY, ET AL. v. PEDRO VASQUEZ PERDOMO, ET AL. from California; denied on September 8th, 2025. While changing one's position from one footnote to the next may not be illegal, conspiring with members of the Federal government to do so is clearly illegal. The American rule elite's disdain for American citizens could not be clearer than in the machinations between these two fully orchestrated opinions.

It is clear the Federal government is playing with the structure of Article III to provide psuedo legal points of temporary authority for personal ingratiation. Kavanaugh's actions together with the allegedly dissenting opinons, which are dissenting merely for the sake of the appearance of a conflicted court that is wholly unified, is clearly destructive of Americans' natural rights. Since these actions are clearly destructive of Americans' natural rights, they, ipso facto, proscribe the application of Thomas Jefferson's remedy for destructive forms of government. On July 4th, 1776, he wrote: "That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness." It is clear that Americans have no choice but to apply Thomas Jefferson's remedy. ["ICE Apprehension of US Citizens Derided as Kavanaugh Stops," Bloomberg Law. October 21st, 2025] decades, the United States now quells protests the Federal government has intentionally inspired; the protests in Minnesota, for instance, are not a response to illegal laws like segregation but the illegal enforcement of immigrations laws against Americans in a crisis the United States itself created with its open border polices together with its broken immigration system. America's behavior could not be less clear. The degeneration of the modern American State is now akin to a chagrin loser, unleashing his or her rage at the people closest to them for no reason other than their proximity in space, time, or relation. American citizens are now subject to the whimsical outrage of a State resembling a thoroughly dispossessed person seemingly incapable of basing his or her actions on sound strategy, policy, or law. America's turn away from achievement, performance, or excellence but towards irrational oppression is thus a profound expression of the personal discontent within the State of its untenable affairs.

If not for the intentionally inspired protests than the proliferation of the State itself, the United States has reached a profound crisis. The U.S. has hundreds of agencies, tens of thousands of commissions, offices, departments, bureaus, or corporations but none have accomplished anything for the country, except a trillion dollar trade deficit. You would think that at least one or more of those units of Federal governance would have a positive impact. The numbers, however, speak for themselves. The proliferation of the modern American State has bred nothing but parasitic excess. Agencies like the CIA or ICE are excess. Countries like China do not have these agencies. As a result, China is flourishing at levels hithertofore unknown to man; its trade surplus alone stands as a testament to its greatness. While former countries like the Union of Soviet Socialists Republics, often bemoaned as the greatest perpetrator of oppression, paled in comparison to the United States, the USSR had no more than a single agency called the KGB. The exact number of U.S. agencies is unknown, just like the amount of money spent on their irrationality.

In contrast with American irrationality, the Chinese leverage the massive trade surplus to trade largely inconsequential consumer goods for NVDIA chips. China therefore transforms largely inconsequential consumer goods into the most coveted GPUs known to man. Consequently, America not only makes the chips for but pays the price for China's AI boom.

Thrasymachus () •

Trumped () • While China's universities soar above the West in countries like the United States, Great Britain, Ireland, Scotland, Portugal, Spain, France, Italy, Belgium, Switzerland, the Netherlands, Denmark, Norway, Sweden, Finland, or Germany, India's universities are starting to become highly competitive. One university in particular is host to a number of scholars.

Sreeram Chaulia, a scholar at the O.P. Jindal Global University, produced a book called Trumped Emerging Powers in a Post-American World, heralding the beginning of the multipolar world. Published before the beginning of the Ukraine war in 2019, in many ways the book anticipates the breakdown of the American world order in the immediate aftermath of Russia's full-scale invasion in on February 24th, 2022.

It is uncommon for countries like India to produce such well articulated political commentary on the United States in the 21st century; the fact that the book is the product of an Indian scholar indicates that China's rising universities, for which there is no single luminary with an outstanding reputation for political commentary, may be technically adept at the production of research papers, they have not yet reached the heights in the humanities for which its own Eurasian competitors exploit for politics already.

Ministry of Truth () • Whereas in George Orwell's 1984, the Ministry of Truth is a public entity. In America neither the Ministry of Truth nor its ministers are public. They are concealed. The Ministry of Truth in America operates in complete secrecy.

Tolbukhin, Fyodor () • Fyodor Tolbukhin, born on June 16th, 1894, is the first liberator of the Crimea. Tolbukhin volunteered for the Russian Imperial Army during World War I in 1914, serving with distinction in a motorcycle company on the the North-Western front. During his service he earned the distinguished Knight's Order of Victory. Tolbukhin, wounded and concussed twice, received the Orders of Anna and Stanislav before he received a recommendation to attend the Imperial Russian Army's Oranienbaum Rifle Officer School, Located on the Gulf of Finland west of St. Petersburg, the Oranienbaum Rifle Officer School, whose graduating officers received FN 1905 pistols with a stamp on the right hand side of the slide with a set of crossed rifles, learned how to integrate the Maxim or Colt machine guns into the existing units of the Russian Imperial Army.[452]

Tolbukhin served in the Red Army during the Civil War. He survived the Stalinist purges initiated in the Russian military with the politically motivated assassination of Mikhail Nikolayevich Tukhachevsky on June 12th, 1937[453] in a political genocide of the entire October generation. Ordered the Order of Suvorov, 1st Class for his success, Tolbukhin commanded the 4th Ukrainian responsible for the liberation of Crimea during WWII.

Trump's plaques () • During the Ukraine war but shortly after the White House Chief of Staff[454] released a silhouette of the members of the Trump administration's cabinet, Donald J Trump impaneled a series of fascinating plaques underneath the pictures on one of the walls in the hall of the White House. In these plaques, Trump expresses his opinions about the pictures. It is really fascinating, since no previous president has subjected his predecessors to a systematic critique, let alone one regarding previous administrations. While these plaques represent Donald J Trump's personal opinions, the plaques are not an official statement from the White House or the Presidency.

tunneling () • During the battle for Avdiivka, the Russians tapped the so-called Tiger[455], a Syrian warrior of partially Russian, partially Syrian origin, for inspiration. The Tiger, whose whereabouts immediately following the fall of the Assad regime spare no mention, save a few in February and March, 2025,[456], conceived of the barrel bombs on Aleppo during the Syrian civil war. The result became Russia's variously sized FAB bombs. It is during the battle for Avdiivka that Russians began to utilize these bombs for crushing Ukrainian defenses embedded deep within the fortress cities of the Donbas. These FAB bombs, however, were not enough to break the will of the Ukrainian defenders.

[452] Журавлёв В. В., «Ораниенбаум. Хронограф Офицерской стрелковой школы». — СПб., 2013.; Журавлёв В. В., Шадрин А. В. «Офицерская стрелковая школа - первый испытательный центр стрелкового оружия Российской армии». — СПб., 2019.

[453] While few, if any, scholars detail the complexities related to Joseph Stalin's relation to Tukhachevsky, a body of evidence exists to demonstrate how Stalin's decisions on the Central Committee led to the defeat of the Red Army in Warsaw, Poland.

[454] The time Bill Clinton's spent with Monica Lewinski in the Oval Office are hard to beat for any president. While the stains on her dressed distracted Americans from America's bombing of Yugoslavia, the White House Chief of Staff's oped is ordinary humdrum for the inner-workings of the creatures from the swamp but at least Joe Biden's insane ramblings about the death of his first son in combat is no longer a part of the evening news.

[455] ["«النمر» قائداً للقوات الخاصة في سوريا... «تجميد» أم سباق نفوذ روسي – إيراني؟. الشرق الأوسط. ١١ أبريل ٢٠٢٤"]

[456] One post portrays the general leading troops in Syria's Alawite territories in March after reports of massacres in February. [سهيل الحسن يشعل الساحل السوري... ما نعرفه عن «النمر» مبتكر البراميل المتفجرة. الشرق الأوسط.٩ مارس ٢٠٢٥"] No subsequent mention follows.

Ultimately the Russians conceived of an old World War I tactical called tunneling. The Russians invaded the city's center from dry tunnels well beneath Avdiivka. It was the first time but certainly not the last time the Russians utilized the tactic during the Ukraine war. Published in a tweet on March 4th, 2024, RTArabic described a Russian soldier as saying, "The enemy expected us above but we came out from under ground."[457]

In the battle for Toretsk, the Russians utilized this tactic once again. [458]. In Kirov, Sky News reported that the Russians utilized tunnels to establish control over a major Ukrainian stronghold.[459] In the months following Russia's victory at Avdiivka, the Russian military television show, Военная Приемка, premiered an episode entitled, Связь в СВО in July, 2024, explaining how Russian связисты (i.e., soldiers specialized in communication) accompanied Russian special forces in the Avdiivka tunnels. Trained in fabricating, welding, torching, the Russian special forces combined various skills to traverse the distance from one end of the tunnel to the other. The Russians later utilized this tactic against in the Kursk direction where Russian special forces traversed one of the empty gas pipelines to dislodge the remaining Ukrainians from the region. In September, 2025, reports began to emerge from the Ukrainian military analyst, describing how Russians infiltrated deep beyond the lines of the Kupiansk fortress. Sky News Arabic subsequently picked up the story, publishing an article on September 13th, 2025.[460]

Though a WWI tactic, Russian tunneling thus far has not followed the WWI pattern of digging large networks like the Railway Wood or the tunnels in the Messine Ridge Offensive for mining but has utilized existing pipelines for gas or other utilities to provide underground passage to the rear.

In a reversal common to the Ukraine war, the Ukrainians adopted the Russian. A series of articles published on October 12th, 2025 followed the Ukrainians attempting to break the Russian offensive in Pokrovsk (i.e., Красноармейск). These are ВСУ затапливают подземные трубы в Красноармейске, чтобы остановить ВС РФ, ВСУ затопили подземные трубы в Красноармейске в попытках остановить ВС РФ from ИА Регнум, Подземная война: зачем ВСУ спешно затапливают канализационные трубы в Покровске from Военное Дело ВСУ затапливают подземные трубы в Красноармейске, чтобы остановить ВС РФ from Комсомольская Правда, and Mash: ВСУ затапливают трубы в Красноармейске в попытке остановить ВС России from RT.These reports originate during the year of the third anniversary before Russia's ruling elite sought to shut down Telegram from the channel named Mash (i.e., [mash:68553]. It is often the case that within less six months from the time a side executes on a new tactic, the opposing side adopts the new tactic, demonstrating how heavily both sides in the war rely upon iteration.

---

[457] ["العدو كان ينتظرنا فوق الأرض لكننا خرجنا من تحتها قائد مجموعة اقتحام أفدييفكا يروي لفريق كيفية اقتحام المدينة وهروب القوات الأوكرانية."] Later new details emerged about Russian tunneling.

[458] On June 30th, 2024, the Russian news agency, Взгляд, published a post on X detailing Russia's utilization of tunnels at Toretsk, stating the following: Крупный опорный пункт ВСУ на восточной окраине населенного пункта Кирова заняли штурмовые подразделения отряда «Ветераны» группировки войск «Центр», используя подземный туннель протяженностью более 3 км вдоль канала Северский Донец, сообщили в Минобороны.

[459] ["باستخدام نفق.. قوة روسية تسيطر على معقل أوكراني كبير."]

[460] ["فيديو.. القوات الروسية تتسلل عبر نفق إلى كوبيانسك"] Subsequent reports in Russia's Регнум media on September 21st, 2025 appeared under the following title, "По трубе - в тыл противника : ВСУ готовятся к сдаче Купянска."

The iteration is at least one of the primary causes for the marginally positive Russian stalemate.

TürkAkım () • Together with the Blue Stream the TürkAkım pipelines represent one of the last remaining trade routes in the Ukraine war. Although under the Black Sea where Ukraine has consistently challenged Russian dominance, the pipelines functioned throughout the Ukraine war. Mentioned only rarely in the press, an Arabic news channel called Al-Jazeera (i.e., الجزيرة) from Doha, Qatar, raised a headline on the TürkAkım in Arabic on May 3rd, 2025 under the title روسيا تقدم ملفا دبلوماسيا لتركيا يضع خط غاز "ترك ستريم" في قلب المواجهة بالحرب الروسية الأوكرانية.. ما القصة؟ where the Qatari news channel described how "هجمات أوكرانية استهدفت البنية التحتية للطاقة المرتبطة بتركيا". The article described how اتهامات روسية لأوكرانيا باستهداف خط أنابيب "ترك ستريم" when خلال ملف دبلوماسي قدم إلى أنقرة في شهر أبريل من هذا العام. The article mentions how يذكر أن روسيا اتهمت الجيش الأوكراني باستهداف خط ترك ستريم عدة مرات. but Turkey’s Minister of Foreign Affairs, Hakan Fidan, denied that Ukraine’s attack in May caused a disruption in the flow of gas (i.e., لم يحدث أي انقطاع في تدفق الغاز بعد الهجوم. ويواصل خط الأنابيب ضخ الغاز بنفس الطاقة الاستيعابية.). The dispute over the TürkAkım thus represents one of the important trade routes at the center of the great power struggle Russia is waging with the West to preserve, maintain, or expand its influence over Europe, NATO Member States, or Ukraine as a transit hub for cheap Russian coal, crude, or gas. [AJArabic: 1918712159523176887] A German news agency claimed as late as August 27th, 2025 how ”Er soll ursprünglich einer zweiten Gruppe angehört haben, die zeitgleich die Pipeline Turk Stream sprengen wollte, durch die Russland Gas nach Südeuropa leitet. Der Anschlag schlug fehl.” [” Und jetzt?” Die Zeit. August 27th, 2025] On February 25th, 2026, Turkish Minute, a German based Turkish daily, declared how ”Putin Warns of possible sabotage of TurkStream, Blue Stream pipelines.”

Designed to travel 930 kilometers under the Black Sea, the TürkAkım split the kilometers at 700 for Turkey, 230 for Russia in 2020 when the two countries first signed the deal where the pipeline sought to provide gas not just to Turkey but to Europe. With 31.5 billion cubic meter capacity, the TürkAkım delivers 15. 75 billion cubic meters annually to Turkey exclusively, while the remainder travels through eastern European Turkey to territories with States formed from the further division of Turkey’s collapsed Ottoman Empire. [Youtube:40BXh4QXoQY: [At least one news channel claimed that Turkey’s incident with an F-16 striking a Su-35 provoked Russia to freeze the agreement.[461] The parties quickly mended relations at which point the agreement proceeded.

Ukraine () • In 1994 the Ukraine surrendered its Soviet stockpiles of nuclear weapons inherited from the collapsed Union of Soviet Socialists Republics, the thirtieth anniversary of which coincided with the second anniversary of the Ukraine war.

Ukrainian () •

Undergrowth () • During Ukraine's 'Spring' counteroffensive, which neither happened in 'Spring' nor amounted to an offensive,' the premier British intelligence service, the cream of the crop from Oxford, Cambridge, King's College London, and Sandhurst, issued an alarming report, accounting for Ukraine's mounting difficulties in overcoming the massive undergrowth characterizing the length of the line, the great Russian general, Surovikin, constructed during the battle of Bakhmut-Artemovsk.

Published by her majesty's Defense Intelligence on August 3rd, 2023, the intelligence update manifested three bullet points. The first stated: "[undergrowth] regrowing across the battlefields of southern Ukraine is likely one factor contributing to the generally slow progress of combat in the area." The second stated: " [the] predominately arable land in the combat zone has now been left fallow for 18 months, with the return of weeds and shrubs accelerating under the warm, damp summer conditions. The extra cover helps camouflage Russian defensive positions and makes defensive mine fields harder to clear." The third stated "Although undergrowth can also provide cover for small stealthy infantry assaults, the net effect has been to make it harder for either side to make advances."

unipolar moment () • China's unipolar moment occured slowly, without fanfare, a media sensation, or a major political event. China's rise to the World's Superpower happened gradually over time primarily due to its ability to exploit the weaknesses its own enemy exposed frequently, carelessly, or haphazardly. During the third stage in the destruction of America's superpower, beginning in 1973 but beginning in 1991, prepared the groundwork for most of the schemes China has exploited to develop societal, technological, cultural, or economic[462] gains against the United States. During the period from 1991 to 2008 when the United States began to display the character of self-destruction more deeply than in the previous three stages stages, the United States became aware of China's rising might in all of its manifestation but simply ignored the warning signs. In the fifth period of America's lost superpower, the United States could not but watch as China began to benefit immensely from strengthening the results derived from the techniques America's own mismanagement of its exposed weaknesses provided. The fifth period of America's lost superpower is from 2008 to 2026 when America's currency as the world's global reserve currency subsided.[463] At the end of these five periods, the fifth period ending now, China's unipolar moment began. China is now the world's reigning global superpower.

The long haired, blue-eyed, blonde, tall Barbie or Baywatch woman is now history. The symbol for great power is no longer the Eye of Providence but the Great Wall of China. The Statute of Liberty no longer greets the world's homeless, tempest-tost with a golden door but with Jack London's jackboot on the heels of Immigration Customs and Enforcement officers, who have raped, maimed, or pillaged throughout Minneapolis, Minnesota. The White House now pales in comparison to the master of puppets at the Pentagon whose inauditable budget is a history of centralized conspiracy against the American people. Hollywood, the home of America's cultural heritage, is ravished with its producers in chains, locked up, behind bars. Chicago, Illinois plays reruns of heroes from municipal services like Chicago PD, Ambulance, Fire, Paramedic. New York's new mayor, a politician just like the last, is manufactured precisely for consent with New York's ruling elites. California, the fourth largest economy in the world, contributed nothing but billions but none of the billions could help. The great State of Texas, a Lone Star, produced a year of the greatest output in oil but even with the greatest output of oil, the Gadsden snake, overladen with the baggage of hundreds of thousands of different types of ticks sucking blood from a heart living on Geitner's xerocopies, whimpered across the global finish line with a trillion in trade deficits for a Federal debt filled with trillions of dead Washingtons, Lincolns, Hamiltons, Jacksons or Benjamins. The great founders look on, dismayed. Treaded upon heavily, the country is now but a shallow reminiscience of a power no longer powerful.

universe () • In Surat Adh-Dhariyat, Ayat 47-57, Mohammed declares how the universe is expanding. Is that expansion a prediction of the theory of relativity?

United Auto Workers () • Although nominally a union, United Auto Workers (UAW) is one of the many organizations the FBI has created over the past few decades to drive disputes over labor into a controlled exit. The UAW is therefore really nothing more than a front.

uranium () • During the Ukraine war, uranium[464] assumed a significance rivaling that of oil. Alongside the rise in the price of uranium compared to the beginning of the Ukraine war, the competition among great powers to source uranium, to build atomic reactors or forbid non-aligned States or State actors from building atomic reactors, harnessing nuclear power, controlling liberated stellar energy or otherwise capitalizing on the physics of energy, intensified sharply.

The Ukraine war acerbated the rising price of uranium like no prior event in the history of the element. In the years prior to the outbreak of the SARS-CoV-2, the price for uranium remained relatively low. The price of the uranium, used in nuclear power stations to generate electricity, rose by 14 per cent from the range of 24 to 26 to 27 dollars after the virus began to cause closures at the mines in Canada, Kazakhstan, and Nimibia. More than a month before Russia's full-scale invasion, the price of uranium jumped to 45.65 dollars. Kazakhstan, the world's largest producer of uranium, supplies more than 40 per cent of global demand through state-controlled Kazatomprom. Akin to the position of OPEC plus for Brent crude, Kazakhstan dominates uranium. In the days leading up to February 24th, 2022, China cornered more than fifty per cent of Kazakhstan's market. China purchases more than half of Kazakhstan's output. Since the major export route passes by rail through the Almaty region, the clashes there slowed exports, causing the price to rise.[465] Without any mention of AI, data centers or sources of electricity, the Financial Times mentioned how uranium is essential for "the electrification of the global economy, with nuclear energy seen as reliable source of low carbon power."[466]

---

[464] In a documentary produced under the auspices of the Bureau of Mines of the United States Department of the Interior called The Petrified River (1957) on uranium mining in the West, the narrator provides a short, concise, straightforward explanation of uranium. It describes uranium thus: "For the elements that make our earth came from the fiery cores of ancient suns, billions of years ago. The simplest of all these elements is the hydrogen atom; it has a single proton in its nucleus and an electron that circles it like a planet. Within suns hydrogen atoms fuse together and are joined by two neutrons. The result is a completely new element, Helium, whose two protons attract a pair of circling electrons. Helium in turn becomes the next heaviest element, Lithium, as more particles join its nucleus. Thus one by one all the 92 elements were forged in stellar fire until the heaviest atom of all was, uranium, was created. Uranium, with a nucleus of 92 protons and nearly twice as many neutrons held together by stellar energy. Uranium, whose energy man has learned to liberate. When a neutron strikes a uranium nucleus, it is absorbed. Under the strain of the added particle, the nucleus grows unstable and splits in two with a burst of energy, releasing more neutrons. In a mass of uranium, the neutrons of one fission travel on to produce further fissions, liberating more and more energy in an intense chain reaction. This same energy will eventually light our cities, run our factories, and power our ships and planes but to harness it man must build atomic reactors."

Launched on February 24th, 2022, the Ukraine war immediately cast doubt over the supply of uranium and its enrichment, causing prices for the precious metal to soar. Russia, the largest builder of nuclear power plants globally, is responsible for more than two-fifths of active worldwide enrichment capacity. With sanctions threatening Russia's economy, the specter of Russia's removal from the global nuclear fuel chain became a source of disruption and price volatility. The result price became 63.80 in 2022. The imposition of sanctions on Russia followed Congress' renewal of a ban on the purchase of Russian enriched uranium imports to the U.S., the observance of which hardly applied, raised the price of uranium together with the war. The war and the reaction to the war thus augmented the price immensely. Shortly after the fall of Bakhmut-Artemovsk on May 23rd, 2023, Niger witnessed a coup. The coup hastened fears over the global supply of uranium. A major supplier to the EU, Niger sells a quarter of its uranium to Europe. In September 2023, the price of uranium surged to its highest level in 12 years. In a global renaissance of nuclear power, the exploitation of uranium for the assertion of great power caused a further rise in the price of uranium. Continuing the momentum of 2023, the price of uranium rose to 91 per pound level. By February, prices reached 105.91 dollars, marking a nearly two decade high. In 2024, the Ukraine witnessed its third anniversary, where much the fighting whittled down from heavily mechanized spearheads thrusting across great distances such as in the beginning of the war or in Ukraine's successful Kharkiv offensive to largely positional attritional warfare in a positive territorial stalemate for Russia. Against the backdrop of uncertainty in Africa with Niger's request for American withdrawal from the country, the price of uranium continued glisten on the outward rays of the conflicts on Ukraine's horizon. Towards the end of 2024, Russia imposed its on negative export controls on uranium, crippling supply for the largest importer of Russian enriched uranium. In 2025, prices largely stabilized around 82 dollars. [467]

---

[465] In the last decade, China has accumulated vast reserves of uranium with a supply equivalent to 11-12 years of demand.

[466] It is important to mention that In a famous remark about the "giant fusion reactor in the sky," Elon Musk has criticized nuclear energy, claiming solar power to provide an equivalent amount of power, yet harnessed from the Sun. In a tweet on December 14th, 2025, he stated: "The Sun is an enormous, free fusion reactor in the sky." Calling them "pet science projects," Musk denigrated the push for building nuclear reactors. In an earlier interview, Musk explains in an interview the amount of electricity a solar park generates is roughly equivalent to that of a nuclear reactor. Musk's point may sound like a minor technicality but against the backdrop of the rising price of uranium, the comment assumes a conspiratorial overtone. Is the emphasis on uranium merely a way to generate monies or profit for mines, investors, or finance capital? Is it a pet science project that the great powers are building or a lucrative hobby horse?

[467] ["Uranium bucks weak commodity trend," Financial Times.], ["Uranium prices jump as Kaza-

While lithium, oil, or other elements certainly compare, no element on earth epitomizes the futility of decoupling a nation-state, let alone a great power like Russia, from the global economy through the unilateral imposition of sanctions, tariffs, or levies; the inescapability of Russia's role in the enrichment of the global supply of uranium underscores the latent interconnectivity which the political form of nation and state, however, brazen, simply cannot overcome. The struggle for "the subjection of the world-embracing economic system to the profit interests of the bourgeoisie of each country" to become the world's superpower leads inevitably to "barbarous disorganization and chaos," "a ceaseless struggle for new and ever new fields of capitalist exploitation, which must be obtained from the one and same source, the earth." The supply of uranium thus concentrated in only a few countries with the enrichment process equally concentrated in Russia, demonstrates how intractable the global economy to singular dominion truly is.

The Great Labor Uprising of 1877 () • The Great Labor Uprising of 1877, which happens to be a the title of a book Philip Sheldon Foner published in 1910, celebrates its 150th anniversary during the fifth anniversary of the Ukraine war.

In 1877 J. A. Dacus published an illustrated history under the title, Annals of the Great Strikes in the United States: A Reliable History and Graphic Description of the Causes and Thrilling Events of the Labor Strikes and Riots of 1877 (CHICAGO: L. T. Palmer Co.; Philadelphia: W. R. Thomas; St. Louis: Scammel Co.: Cincinnati: W. S. Forshee Co.). 480 pages wide, the book contains multiple illustrations, depicting the key moments in the great strike. Alternatively decried as riots, the great labor uprising is the subject of Edward Winslow Martin published at 516 pages wide with illustrations under the title, The History of the Great Riots (1877).

In 1997, the Center of Military history of the United States Army, Washington D.C. grouped the great labor uprising into a volume of "disorders" under the title of "The Role of Federal Military Forces in Domestic Disorders 1877-1945" (i.e., CMH_Pub_30-15-1) where the authors, Clayton D. Laurie and Ronald H. Cole, analyzed the application of the Federal government's deployment of the military to crush the uprising. The volume, which celebrates its own thirtieth anniversary during the fifth anniversary of the Ukraine war, celebrated the 110th anniversary for the great labor uprising at the time of its publication in 1997. Multiple alternative descriptions call the great labor uprising from 1877 either the "Great Railway Strike of 1877" or the St. Louis Commune, emphasizing different aspects of the great uprising.

V

Sacco and Vanzetti Executions () • The framed-up Sacco and Vanzetti executions of 1927 mark their grim 100th anniversary during the sixth anniversary of the Ukraine war.

Valentinov, Nikolai Vladislavovich () • Nikolai Vladislavovich Valentinov Николай Владиславович Валентинов (18 May 1880 – 26 July 1964) wrote a number of important works about the 1920s in the Soviet Union.

Vasari, Giorgio () • Vasari's book is canon unto itself for many enamored with color, light, or sight. Printed under the title, Le Vite de più eccellenti architetti, pittori, et scultori italiani, da Cimabue insino a' tempi nostri, Visari's book is an indispensable source of information on the lives of Venitian painters, illustrators, or draftsmen. Printed in 1568, Vasari's contribution to the biography of artists in the Renaissance will celebrate its 460th anniversary in 2028.

Place Vendôme () • During the night from February 18 to February 19, 1796, Parisians torched the presses, plates, and paper for French assignats, initiating the beginning of a shift from paper to metallic currency in post-revolutionary France.

On the 80th anniversary of the Place Vendôme (which today is the 150th anniversary), Andrew Dickson White published an essay, explaining how the value in the French assignats vanished into thin air. White explains how printing caused the French assignats to lose value in comparison with metallic currency still in circulation but no longer issued.[468]

When the National Assembly approved Gouy's call for Place Vendôme to liquidate the national debt by printing no less than twenty-four hundred millions ”par une seule opération grande, simple, magnifique,”[469] Brillat-Savarin predicted the new issue would depreciate the assignats by more than ”30 per cent.” Jacques Necker (September 30th, 1732 to April 9th, 1804), a Genevan Protestant ”among the great bankers of Europe” [pg.1], a financier and a statesman who served as finance minister of France for Louis XVI and subsequently continued his post in the National Assembly, ”sent his resignation and left France forever.” The paper money demagogues, White writes, ” shouted for joy at his departure; their chorus rang through the journalism of the time. No words could express their contempt for a man who was unable to see the advantages of filling the treasury with the issues of a printing press. Marat, Hébert, Camille Desmoulins and the whole mass of demagogues so soon to follow them to the guillotine were especially jubilant.” [pg. 13] Lablache, who voiced opposition to the second issue of assignats, is quoted in one of the most significant newspapers in mankind, the Moniteur from September 5th, 6th, and 20th, 1790, as saying that ”paper money is the emetic of great states.”[470]

Наум Виленкин () • Наум Виленкин published a series of books on Наум Виленкин Комбинаторика, the combined effect of which liberates ordinary consciousness from the rigors of arithmetic counting. These books, all of which were published during the

---

[468] [”Fiat Money” in France: How it Came, What it Brought, and How It Ended. White, Andrew Dickson. 1876.]

[469] White claims Gouy's operation ”sounds curiously like the proposals of the ”Greenbackers,” regarding the American debt, some years since.” [pg. 12]

[470] In contrast with France during the French Revolution, the United States of America is witness to no debate whatsoever regarding whether or not to print, commission new issues, or else base the currency on specie. America is far less democratic than revolutionary France. Whereas France ”stood at the parting of the ways,” ”the turning point between good and evil,” the U.S. is not only fully committed to the glorification of paper but unwilling to entertain even the semblance of dissent.

U.S.S.R., represent one of the greatest contributions towards the development of a way of thinking beyond the theory of sets. His books include Виленкин, Н. Я. Комбинаторика. — М. : Наука, 1969. — 328 с., Виленкин, Н. Я. Популярная комбинаторика. — М. : Наука, 1975. — 208 с..

Военно-исторический журнал () • *Военно-исторический журнал*

vulture, viper and cobra () • Rarely is it mentioned in American history how the evolving debate over private central banking[471] is deeply rooted in the final outcome of American power throughout its history. The reality is that only by the realization of Jefferson's wish for an amendment prohibiting borrowing is it possible for the U.S. to escape the problem of private central banking.

Volnoye, Dnepropetrovsk (Ukraine) () • On July 19th, 2026, the Russian Ministry of Defense announced that Army Group East seized the village of Volnoye in the Dnepropetrovsk region. On its way to capturing the entire Great Bend at the Dnipro, Russia increasingly expanded its hold on the eastern Donbas during the Fourth Anniversary of the Ukraine war.

Восток, Новый () • One of the most illustrious sources of early 20th century lore on the Middle East, an exceptionally marvelous compendium of beautifully written articles and essays with diagrams and maps, an Oriental collection of great writing unlike anything comparable from the time, the Russian Новый Восток began to publish during the 1920s, publishing more than 29 books over a short span of time.[472]

After Trotsky's expulsion from the Soviet Union, Stalin initiated the political genocide of the October revolution where operating within the framework of labour broadly speaking became a struggle over the politicization of ideas that the Stalinist regime won with few exceptions.

М. Павлович (Вельтман)'s Новый Восток is not to be confused with two similarly named journals. The first is Восток.[473]; the second is Революционный Восток [474] The second is Революционный Восток (i.e., «РЕВОЛЮЦИОННЫЙ ВОСТОК» за 1927–1931 гг. Журнал Научно-исследовательской ассоциации при Коммунистическом Университете трудящихся Востока имени И. В. Сталина..

---

[471] The parasites clinging to the ruling elite in the State security apparatus are oblivious not only to the fact that there is no longer any debate about private central banking (as the WSWS, for instance, tends to focus less on a criticism of private central banking than on the price of gold, the dollar, or the currency for commodity contracts, a terrible error) but to its implications.

[472] Published in paperback at approximately 27 by 18 centimeters, the books are falling apart now. Available in the libraries of the University of Illinois at Urbana-Champaign and the Hebrew University of Jerusalem or mostly on Google, the unforgetable collection of Новый Восток books is a magnificient experience. Новый Восток. Журнал. Под ред. М. Павловича (Вельтмана). Кн. № 1-2. - М., 1922; Кн. № 3-4. - М., 1923; Кн. № 5-6. - М., 1924; Кн. № 1, 8/9-10/11. - М., 1925; Кн. № 12, 13/14, 15. - М., 1926; Кн. № 16/17, 18-19. - М., 1927; Кн. № 20/21, 22, 23/24. - М., 1928; Кн. № 25, 26/27. - М., 1929; Кн. № 28-29. - М., 1930. Новый Восток is no exception. Of particular interest for the Ukraine war is Volume 3. In Volume 3, М. Павлович (Вельтман) presents a map of Manchuria. There is an article on Crimea. An essay on Egyptology is embedded into a photograph of Tutankhamen. By sheer coincidence Volume 3 thus forecasts a rising China, the contemporary contest for Crimea, the inauguration of the Grand Egyptian Museum, three events the Ukraine war witnessed.

[474] «РЕВОЛЮЦИОННЫЙ ВОСТОК» за 1927–1931 гг. published the following numbers: № 1, 2, 1927; № 3, 4/5, 1928; № 6, 7, 1929; №. 8, 9/10, 1930; №. 11/12, 1931

The first journal, which is less political than the other two, focused on surfacing the ”вечные образцы” the ancient world beholds. The journal does not address nationalism, a central issue of political division separating Trotskyists from Stalinists, in articles where the subject recommends itself for discussion. An examination of the journal's treatment of China, for instance, reveals that neither Lenin nor Stalin, the two most frequently quoted authorities on nationalism, appear in articles about China, the Chinese republic, Chinese history, Confuscianism in China, Chinese poetry, or Chinese literature in any of the five books by a single author. "Китайская республика", "Очерки современного Китая," "Учение Конфуция в китайском синтезе," "Ли Бо. Из четверостиший," "Ляо Чжай. Таланты китайского судьи," "Лю Шуя. Как сменялись мои идеалы," (i.e., В. Алексеев. Восток, с. 92 Кн. № 1; с. 105 Кн. № 2; с. 126 Кн. № 3; Перев. с китайского с. 87, 103, 184 Кн. № 5) An examination of the journal's bibiolography displays no quotation, quote, extract, excerpt, passage, line, citation, or reference to any Soviet political literature, let alone anything related to the question of nationalism.A mistake after the party split in 1924 on Lenin's deathbed, failing to mention either Lenin or Stalin is likely one of the reasons the journal stopped printing books after 1925. The imposition of the Stalinist world view required scholars to kowtow the party line into every nook and cranny of the otherwise free thought the October generation exprienced prior to the Soviet Union's degeneration under Stalin's bureaucratic centralism. Восток is therefore a testament to the flourishing of human thought during the relatively prosperous first years of Soviet power under Lenin's democratic centralism.

In the second journal, the authors address nationalism directly. Although comparative historical analysis makes no mention of the differences betwee these three journals, the silver lining is the editor. М. Павлович (Вельтман)'s close association with Trotsky in the Petrograd Soviet both during the 1905 and 1917 revolutions and his participation in Trotsky's Military Revolutionary Committee during the Russian Civil War and his knowledge of politics distinguish his journal from the other two markedly. Comparing М. Павлович (Вельтман)'s ”Ленин и Народный Вопрос” from Новый Восток (i.e., №. 5) with ” ” from «РЕВОЛЮЦИОННЫЙ ВОСТОК» (i.e., №. 8), the revisionism of the latter is a reflection of the putrid degradation to which Stalin's implementation of bureaucratic centralism plunged the entire Soviet Union. It devastated study into the East.

An obscure but astute Menshevik who became a Bolshevik with an exile spanning many years of stable residency in France before the great Russian revolution, named М. Павлович (Вельтман), led the editorial board of the journal until his untimely but timely death in 1927 on June 19th. During the fifth anniversary of the Ukraine war М. Павлович (Вельтман) marks the 100th anniversary of his death.[475] Born on March 13(25), 1871 in Odessa, Ukraine, М. Павлович (Вельтман) began to participate in social-democratic circles as early as 1892. At the age of 21, the Russian czar's secret police arrested М. Павлович (Вельтман) for revolutionary activity, exiling him to Siberia in the city of Верхоянск, a town in Verkhoyansky District of the Sakha Republic, Russia, located on the Yana River in the Arctic Circle, 92 kilometers (57 mi) from Batagay, the administrative center of the district, and 675 kilometers (419 mi) north of Yakutsk, the capital of the Sakha republic. Just six years later, М. Павлович (Вельтман) joined the Russian social-democratic workers' party (RSDRP); М. Павлович (Вельтман) conducted party activity in Odessa, Ukraine, and in the Capital of Moldova, Chisinau. М. Павлович (Вельтман) worked closely with Lenin in Paris, France from 1901. After the second conference of the RSDRP (1903), М. Павлович (Вельтман) joined the Mensheviks. During the revolutionary years of 1905 to 1907, М. Павлович (Вельтман) worked in the RSDRP's Petrograd military organization. After the full suppression of the 1905 January revolution, М. Павлович (Вельтман) returned to Paris, France where he stayed for ten years until the outbreak of mass protests in Petrograd. During those ten years, he converted himself into an expert on self-determination, nationalism, and liberation in the Middle East. According to early Soviet dust jackets, М. Павлович (Вельтман) published a number of now extremely rare books in French. These are the following in sequential order: 1) Michel Pavlovitch. Le conflit anglo-allemand. Paris, 1913., 2) Michel Pavlovitch. Zelim Khan et le brigandage en Caucase. Paris, 1914. 3) Michel Pavlovitch. La brigade des cosaques en Perse. 1914. 4) Michel Pavlovitch. La dernière bataille (La révolution en Perse. Paris. 1914. These pre-WWI French books rarely appear in bibliographies; there are no Russian translations for these books. There are no second editions printed in Russia. It is likely that М. Павлович (Вельтман) could not obtain copies of his own books after the end of WWI. During WWI М. Павлович (Вельтман) voted against war credits for nations, advocating for internationalism. After the October revolution, М. Павлович (Вельтман) worked for the People's Commissariat of Foreign Affairs. In 1918 he joined the Russian Kommunist Party (Bolsheviks), becoming the head of the Main Committee on the State Buildings of the Russian Socialist Federation of Socialist Republics (RSFSR). In 1919-20, М. Павлович (Вельтман) became full member of the Revolutionary Military Committee on the Southern Front (i.e., Ukraine and Crimea) for the elimination of Врангель.[476] In 1920 М. Павлович (Вельтман) participated in the preparation for the first conference of the people of the East in Baku, Azerbaijan, having become a member of the Committee for action and propaganda. During the years 1921 to 1923, М. Павлович (Вельтман) became a member of the People's Commissariat of Nationalities of the RSFSR. His longest post by far is his role as the head of the All Russian Academic Association of Orientalists where he presided for no fewer than 6 years continuously. It is here that М. Павлович (Вельтман) produced his greatest work, the Новый Восток.

---

[475] Вместе с М.П.Павловичем (Вельтманом) похоронены: Вельтман Мария Михайловна (1877–1940), жена С.Вельтмана; Вельтман Соломон Лазаревич (1883–1960), учёный секретарь Научной ассоциации востоковедения, брат М.Павловича; Вельтман Павел Михайлович (1885–1962)

Least of all well known is М. Павлович (Вельтман)'s contribution to international relations. М. Павлович (Вельтман) produced the most penetrating analysis of Russo-American relations ever written in the Russian or English languages in the 20th century. Rivaled by no competing work, М. Павлович (Вельтман)'s perspective on America presents a view of America from a Soviet perspective in the 1920s with a detailed history of Russia's support for America from the earliest days of the founding fathers to the period following 1905. It is so praiseworthy of Russia's support for

---

[476] Had М. Павлович (Вельтман) lived a longer life, he would have met an early death at Stalin's hands for his participation in the Military Revolutionary Committee during the civil war.

America that the work is almost nostaglic about monarchist Czarism. In a series entitled, РСФСР в империалистическом окружении., М. Павлович (Вельтман)'s analysis of Russo-American relations is in the third edition (i.e., Вып. 3. Советская Россия и капиталистическая Америка).

An accomplished translator, М. Павлович (Вельтман) oversaw his brother's translation of Georges Maurice Paléologue's La Russie des tsars pendant la Grande Guerre (1921-23) from French into Russian.[477] М. Павлович (Вельтман) decorated the first volume of Новый Восток with French. It reads in French the following: "Nouvel Orient: Revue de l'Association Russe pour les Etudes Orientales." М. Павлович (Вельтман) left behind a wealth of publications on a range of topics. These priceless contributions to the study of Eurasia proper are among the most insightful of the 20th century.[478]

In Russian history, Мих. Павлович (М. П. Вельтман) is most popular work is on the first World War. In that respect, Мих. Павлович (М. П. Вельтман)'s first series is an elaborate exposition of the causes and consequences of the war from an international, Leninist, Marxist perspective. Мих. Павлович (М. П. Вельтман)'s series on the first World War is entitled *Онсновы империалистической политики и мировая война.* It contains no fewer than eleven separate books. These are the following: Книга I : Империализм и борьба за мировые пути (2-е издание), II: Что такое империализм?, III: Интернационал смерти и разрушения, IV: Милитаризм, маринизм, нынешняя война, V: Часть 1-я Генезис и основные черты империализма современных государств. Часть Первая. Фрацузкий империализм, V: Часть 2-я Германский империализм (Готовится к печати) VI, V: Часть 3, 4, 5-я (Готовится к печати), VI: Союзы и соглашения : тайная дипломатия (Готовится к печати), VII: Роль финансового капитала во внешней политике (Готовится к печати), VIII: Азия и ее роль в мировой войне, IX: Мировая Война и борьба за раздел черного континента, X: Итоги войны, XI : Брестский мир и условия экономического возрождения России. These books represent the single greatest comprehensive study an international Leninist Marxist has ever made of the first World War.

It is the first comprehensive study of the first World War in history of the Soviet Union. The book series began to print even before the end of World War I. In fact, the study is so hot off the press that Мих. Павлович (М. П. Вельтман)'s typography from his books demonstrates the state of the Russian language; his spelling, for instance, contains pre-reform orthography such as a десятеричное in the word for "world" or a ять in the word for раздел, indicating that the series literally flew off the Russian press following the successful conclusion of the Bolshevik seizure of power. Books V, VI, and VII, however, do not appear to be available. His first series appears to have ran through no fewer than three editions. A 1922 faceplate with the title *Онсновы империалистической политики и мировая война.*, for instance, has three forewords for Book I, Part I (even though the original plan did not call for two parts in the first book), despite unavailability of Books V, VI, and VII.

Мих. Павлович (М. П. Вельтман) produced a number of series on international relations during the first part of the 1920s. The first series is entitled

---

[477] : / ; . . - ; :
, 1923. - 314, [2] . .

[478] М. Павлович (Вельтман)'s are as follows:Revue de l'Association Russe pour les Etudes Orientales Redacteur en chef Michel Pavlovitch.

[479] Printed according to the following dimensions 22,4x15 , the fives books in the series are as follows. 1.) Мих. Павлович (М. П. Вельтман) *Р.С.Ф.С.Р. В империалистическом окружении. Вы-*

Р.С.Ф.С.Р. в Империалистическом Окружении[479]

The faceplate for the series is inconsistent. After the first three, the faceplate changes. Whereas the publisher for the first, second, third book is Moscow's government publishing house (i.e., Государственное издательство), the publisher for the fourth book in the series changes. It becomes *Красная новь*. The title falls out of order. Whereas in the first through the third the title reflects a standardized naming convention, the naming convention is dropped in the fourth book. It is not, for instance, Советская Россия but a general subtitle. The series remains incomplete. In the prologue of the third book, Мих. Павлович (М. П. Вельтман) promises to publish the fifth book as a "Россия и Германия," a promise that he apparently does not keep, despite ample information on Russo-German relations at the time. In the prologue to the fourth book in the series, Мих. Павлович (М. П. Вельтман) explains that the first three complete the first part of the series with the Entente Cordiale. He promises to provide a second final half of the series with three rather than one more installment. The three he planned were as follows: 1) Р. С. Ф. С. Р. и Германия. 2) Р. С. Ф. С. Ф. и пограничные европейские державы (Финдляндия, Эстония, Латвия, Литва, Польша, Румыния). 3) Р. С. Ф. С. Р. и пограничные государства Востока (Турция, Персия, Афганистан, Китай, Монголия). Although Мих. Павлович (М. П. Вельтман) wrote about or published books on these countries, it is not clear whether he completed the last three books he planned for the second half of the series.; the second se-

Комиссия по Истории Октябрьской Революции и Р. к.П. (б-ков) (1922) 4.) Мих. Павлович (М. П. Вельтман) *Р.С.Ф.С.Р. в Империалистическом Окружении* : Японский империализм на Дальнем Востоке. М: Красная новь, 1923. 145 с.

[480] While Мих. Павлович (М. П. Вельтман)'s second series of books is redeveloped from the first series, the second series is, nonetheless, a distinct series. It is clear from Мих. Павлович (М. П. Вельтман)'s prologue for the first book in the series that he not only intended to change the content of the books in the first series, he changed the target audience. He writes: В основу данной книги (переработанный курс лекций, читанных в военной академии Р.-К. К. А.), обнимающей отношения советской России к большой Антанте (Франция, Англия Япония, Америка), легли работы автора, вышедшие в 1921—1922 г. и уже разошедшиеся. Автор значительно переработал эти выпуски и дополнил их новыми главами, доведя, таким образом, анализ событий до текущего момента. Первый выпуск посвящается взаимоотношениям России с Францией, второй —с Англией, третий—с Америкой, четвертый—с Японией. Пятый выпуск будет посвящен новой теме, которой автор не касался в предшествующих выпусках, именно—взаимоотношениям России и Германии."The books for *Советская Россия и Капиталистические Державы* are as follows: 1) Мих. Павлович (М. П. Вельтман) *Советская Россия и Капиталистические Державы : Выпуск Первый. Советская Россия и Франция. Высший Военный Редакционный Совет. Москва: 1924.* 2.) Мих. Павлович (М. П. Вельтман) *Советская Россия и капиталистическая Англия: Выпуск Второй. Советская Россия и Франция* : (От эпохи царизма до правительства Чемберлена-Болдуина 1925 г.) Испр. и доп. изд. - М. : Прометей, 1925. - 202 It doesn't appear as though Мих. Павлович (М. П. Вельтман) published a third in his second series. Moroever, Мих. Павлович (М. П. Вельтман)'s books on Germany do not appear in his collected works so there is reason to believe that Мих. Павлович (М. П. Вельтман) never managed to complete the research for a book on Germany. Given the obscurity surrounding the trajectory of his series, there is a chance that Lenin may have asked for publishers to suppress the publication of information on Germay. At the time that Мих. Павлович (М. П. Вельтман) was writing on these subjects, the Soviet Union had begun to discuss a secret treaty with Germany. Could it be that Мих. Павлович (М. П. Вельтман)'s books on Germany were classified? It is unlikely. No antecedent example from Russian publications at the time recommends this possibility. The absence of volume 4, 6, 8 from Павлович (М. П. Вельтман)'s Collected Works, however, certainly give pause to reconsider the possibility,

ries is entitled *Советская Россия и Капиталистические Державы*.[480]

Overall these series demonstrate that Мих. Павлович (М. П. Вельтман)'s knowledge of Russian history, Russian international relations, and Russian diplomacy met or exceeded his knowledge of the East. However, these series are printed from entirely different perspectives for completely different audiences. The first series, which the Commission on the History of the October Revolution published in 1922, covers Russia's history of international relations with the great powers. The series is composed of five parts. The first part is dedicated to Russia and France; the second to Russia and England; the third to Russia and America; the fourth to Russia and Japan; the fifth to Russia and Germany. This series, which covers less a specified duration in time related to the first World War as in the other series than to the history of relations between Russia and a great power, cover the development of Russia's foreign relations with Europe in the Mediterranean, the English in the English Channel, the U.S. in the Atlantic, Germany in the Baltic, and Japan in the Pacific seas and oceans. Dedicated to a spin around the world with Russia's relations at the center, Мих. Павлович (М. П. Вельтман) highlights the most important events, treaties, conflicts, trade agreements, tensions, or breakdowns in the history of Russia dealing with these countries.

The other series, however, takes as its point of departure the first World War and the nature of international relations with great powers during a period of intense conflict, economic competition and aggressive nationalist rivalry. Designed to provide insight to the results and consequences of clashing great powers, the series in Soviet Russia and the Great Powers of Capitalism, as the author himself explains, is composed as a series of lectures for the Military Academy of the Workers' Peasant Red Army. It encompasses Soviet Russia's relations with the Entente Cordiale (the understanding Britain and France reached in 1904 that formed the basis of Anglo-French cooperation in World War I and that encompassed also Japan, and America) on the eve of the first World War and it is based on research Мих. Павлович (М. П. Вельтман) published in 1921 and 1922. The first book in the five part series is dedicated to Russia's relations with France, the second those with England, the third those with America, the fourth those with Japan. The fifth part, as the author explains in a note to his first part, is dedicated to a theme the author had not explored in previous parts, Soviet Russia's relations with Germany. These lectures were intended to educate the Russian workers involved in the defense of the nascent Soviet state from the incursion of more than 14 separate powers vying for the dismembered splendors of Russia's former empire on the Eurasian continent.

In 1922 М. Павлович (Вельтман), who assisted Trotsky personally at the conference on the Treaty of Brest-Litovsk, produced a stunningly insightful analysis of Wilson's failure in a foreword he prepared for a compilation of the papers prepared by Ray Stannard Baker (April 17, 1870 - July 12, 1946) called Woodrow Wilson and World Wettlement (Garden City, N.Y. : Doubleday, Page Co. (1922). Entitled *Вудро Вильсон Мировая Война и Версальский Мир: По Документам и Запискам Председателя Амриканского Комитета Печати на Версальской Конференции Стэннарта Бекера* (Государственное Издательство. Москва — Петрограв (1922)). The foreword is 21 pages long. In the foreword, М. Павлович (Вельтман) makes a number

---

especially since volumes 1, 2, 3, 5, 7, 9 do not cover Germany. A note about a ten book series in which the second part of the fifth book is mentioned is equally suggestive. "V: Часть 2-я Германский империализм (Готовится к печати)". Based on the overall series of observations, Мих. Павлович (М. П. Вельтман)'s German works are likely sealed in the KGB archives.

of points against Wilson, claiming first of all that Wilson's 14 point plan failed. М. Павлович (Вельтман) contraposes Wilson's поражение на конференции to the fact that Wilson was the most popular figure in the world, a legendary hero, whose "words moved armies, millions of people," the head of the most powerful country in the world. Wilson's handling of American power at the Paris Peace Conference, which opened on 18 January 1919 at the Quai d'Orsay in Paris, amounted to a travesty. In no way did Wilson achieve any of the objectives from his 14 point plan. М. Павлович (Вельтман)'s forward, which reveals how America's decisions regarding the war resulted in a lack of strength at the Paris Peace Conference, is dedicated to an explanation of the reasons for Wilson's[481] defeat.

One of the reasons М. Павлович (Вельтман) attributes to Wilson's failure is his misunderstanding of the scope of the war. Wilson's 14 point plan, for instance, did not address treaties from 1916 such as the one called the Sykes-Picot Agreement Lenin and Trotsky exposed. Alongside his misunderstanding, Wilson's decision to station troops in Europe; Америка отправляла все свои войска не в Африку, не в Азию, куда их никто не приглашал, а на французскую территорию, where American troops were placed directly at the mercy of the Entente, far away from America, America's supply lines or American authority. М. Павлович (Вельтман) characterizes Wilson's insistence on the provision to preclude annexations to be without support, since Американский меч оказался крепко зажатым между клинами французского, английского, японского, итальянского мечей. The way Wilson intervened in the war fell out of scope with his desire to enforce upon the Entente his desired outcome.

In the literature on the United States or Woodrow Wilson, no commentator comes even close to the analysis М. Павлович (Вельтман) provides his foreword. While much of М. Павлович (Вельтман)'s knowledge of the United States informs his understanding of Woodrow Wilson, one aspect of his knowledge at the time is foremost among Russian revolutionaries. М. Павлович (Вельтман) is perhaps the first Russian Bolshevik to describe America in terms of oil in the Middle East during WWI at a time when an understanding of the role of oil WWI remained a matter of research for historians. М. Павлович (Вельтман) describes America as величайшая нефтяная держава.

М. Павлович (Вельтман) praises

---

[481] Philip Dru: Administrator: A Story of Tomorrow, 1920-1935, a futuristic political novel published in 1912, by the founder of the U.S. Federal Reserve, Col. Edward Mandell House (1912), forecast a grim future for the Republic where a crisis empowers a strongman to overthrow its constitution so that an authoritarian government may rule over workers. It is Orwellian well before George Orwell's birth. The author would become a confidant to Woodrow Wilson. Wilson would say of House the following: "Mr. House is my second personality. He is my independent self. His thoughts and mine are one. If I were in his place, I would do just as he suggests." It is alleged that Col. Edward Mandell House handpicked the entire lot of the members of the U.S. Federal Reserve Board. In his collection, called The Intimate Papers of Colonel House (Boston and New York : Houghton Mifflin Co: 1926), Charles Seymour reveals house to be: "the unseen guardian angel of the Federal Reserve system." With the passage of the Federal Reserve Act by the 63rd United States Congress under President Woodrow Wilson's signature on December 23, 1913, Wilson became the chief architect of America's decline. Alongside of his work with House to pass the Federal Reserve Act, Wilson became a major theoretical advocate against natural law, advocating for law as an instruction (where the law does not codify an ordinance of reason but serves as a guideline for judgement); the present overthrow of Article III stems primarily from an adoption of Woodrow Wilson's advocacy. Woodrow Wilson's legacy contrasts sharply with that the Founding Fathers or Abraham Lincoln. There is perhaps no president in the history of American whose policies undermined America more than Woodrow Wilson's. If there is a single point in American history where the entirety of the county witnesses its fortune tip from from favor to disfavor, the moment is none other than the Presidency of Woodrow Wilson. It is on the cumulative basis of the policies from Woodrow Wilson's presidency that the entirety of the post-WWII period of America's superpower develops from prosperity to decline.

Trotsky when he writes: “Не было еще примера столь благодетельного значения гласности. Все компрометирующие содержание тайных договоров (насколько они были в то время известны) было опубликовано тогдашним большевистским комиссаром иностранных дел Троцким в “Известия”, официальном органе Советов, в ноябре 1917 г. Это дало Троцкому право сделать в своем манифесте заявление, получившее могучий отзвук у левых партий всего мира; оно заключалось в том, что отныне “народ получил документальные доказательства о тех заговорах, которые тайком вынашивал финансовый и промышленный капитал совместно с своими парламентскими и дипломатскими агентами.” (p.19)

Apart of these analyses, Мих. Павлович (М. П. Вельтман) published a series of lectures in English entitled, THE FOUNDATIONS OF IMPERIALIST POLICY.[482] The book’s subtitle indicates that Мих. Павлович (М. П. Вельтман) developed the book as a course of lectures for the academy of the Workers’ Peasants Red Army General Staff for reading during 1918 and 1919. It is in this book that Мих. Павлович (М. П. Вельтман) introduces a key concept for his work in geopolitics. Described as the “golden fleece,” Мих. Павлович (М. П. Вельтман) takes “the brutal materialist fact of the hunt of man for the yellow metal” as a point of departure for explaining his own theory of imperialism. Dividing existing theories into three groups, the philosophical group on the essence of imperialism, the historical and Marxian group, Мих. Павлович (М. П. Вельтман) is the earliest Marxist to attribute the effects of monopolization to financial parasitism or rentiers, or “stockholders-that is, to people who live exclusively on cutting their coupons. Such a stockholder possessing shares, as the saying goes, neither sows nor reaps, does absolutely nothing, plays the rôle of a parasite, and nevertheless gets all he needs.” (pg. 116) Мих. Павлович (М. П. Вельтман) explains how the bourgeoisie, the capitalist entrepreneur, the administrator of the ancestral industry , has come to be lost in a sea of parasites in the latter aspect of Lenin’s explanation of imperialism’s last stage where not only is there monopoly but “capitalism enters a period of decay and death,” embodying a tendency towards its own self-destruction. In contrast to Lenin or perhaps one step back but two steps ahead of Lenin, Мих. Павлович (М. П. Вельтман) thus described the “period preceding the World War” as “degenerate,” attributing the “main cause of this decadence” to “parasitism appertaining to imperialism,” a period described as “the cataclysm of 1914-1918” as “the epoch of parasitic decaying capitalism.”

In addition to the East, international relations, and the foundations of Imperialism and Lenin’s work, Мих. Павлович (М. П. Вельтман) wrote a number of books on Russo-Japanese relations, the Pacific Ocean and the Russo-Japanese war in 1905. Мих. Павлович (М. П. Вельтман)’s complete works are collected into nine volumes before he died under the series title *Империализм и мировая политика последних десятилетий.* Of the nine volumes only numbers 1, 2, 3, 5, 7, 9 were published. Volumes 4, 6, 8 apparently were never published. These were printed once from the years 1925 to 1927 without a second reprint. They are exceedingly rare in Russian libraries, auctions or online repositories. A neologism, the world “geopolitics” is anachronism for

---

[482] Pavlovitch, Michel. The Foundations of Imperialist Policy: A Course of Lectures Read to the Academy of the General Staff in 1918—1919. London: The Labour Publishing Company LTD 6 Tavistock Square, W. C. 1 (1922). The Russian equivalent is the following: Павлович, Михаил Павлович. Империализм : Курс лекций, чит. в Акад. Ген. штаба в 1922-1923 гг. / Мих. Павлович. — Москва : Красная новь, 1923. — 236 с. : 24 см.

Russian specialists from the October revolution. Described as an expert in the subject, Мих. Павлович (М. П. Вельтман) is perhaps best known for his mastery of "world politics" (i.e., *мировая политика*).[483]

Vuhledar () • The battle at Vuhledar is a twin battle with Avdiivka in that these battles, both having begun before Bakhmut-Artemovsk, continued well after Evgeny Prigozhin captured the latter city, determining not only Russia's ability to advance farther into the Donbas but the future course of the war, if not the nature of warfare itself. Chasiv Yar, one of the villages Evgeny Prigozhin sought to capture with the Wagner PMC, together with Toretsk, are like Vuhledar and Avdiivka in that they are also twin battles. Chasiv Yar and Toretsk represented in 2025 what Avdiivka and Vuhledar represented in 2024, major, long time bastions of fallen Ukrainian resistance in the Donbas. Whereas Avdiivka fell on January 17th, 2024 before Ukraine's Kursk offensive, Vuhledar fell during Ukraine's Kursk offensive when the Russians began to revive the Soviet military doctrine for encirclement from its famous operation during WWII called Операция Кольцо, the largest-scale economy-of-force offensive ever conducted in the history of modern combined arms warfare.

The success of the following Кольцо operations in the Donbas after the fall of Vuhledar led to the subsequent fall of the minor villages stretching from Avdiivka to Pokrovsk in the remainder of 2025.

Vyshnegradsky, Ivan Alekseyevich () • In the decades leading up to an eruption of war on the European continent, Ivan Alekseyevich Vyshnegradsky (Russian: Иван Алексеевич Вышнеградский; 1 January 1832 – 6 April 1895) organized famine in 1891 (i.e., 131 years before the beginning of Russia's full-scale invasion) so that the Russian monarch, Alexander III, could boost its accumulation of gold. Although Vyshnegradsky's achievement for a balanced budget at the expense of the peasant masses caused hundreds of thousands of deaths, his accumulated gold reserves strengthened the Russian rouble. It is alleged that during the time Vyshnegradsky occupied the post of Russia's Finance Minister from 1887 to 1892, Russia's mines in Siberia yield no less than a million ounces of gold a year (i.e., 28.34952).[484]

---

[483] Мих. Павлович (М. П. Вельтман)'s collected works are as follows: 1.) Павлович, Михаил Павлович. Собрание сочинений : Империализм и мировая политика последних десятилетий. Империализм / 24 см.. — Ленинград : Гос. изд-во, 1925-1927, 1925. — 248 с. 2.) Павлович М.П. Собрание сочинений. Империализм и мировая политика последних десятилетий. Т. 2: Империализм и борьба за великие железнодорожные и морские пути будущего: (к вопросу о причинах Мировой войны). — 1925. — 256 с.: карт. 3.) Павлович, Михаил Павлович. Собрание сочинений : Империализм и мировая политика последних десятилетий. Т. 3:Борьба за Азию и Африку / 24 см.. — Ленинград : Гос. изд-во, 1925-1927, 1925. — 257 с. : ил., карт. 5.) Павлович, Михаил Павлович. Собрание сочинений : Империализм и мировая политика последних десятилетий. [484] If Russia continued to accumulate gold at a rate equivalent to the Vyshnegradsky rate from the years 1991 to 2026 (i.e., 35 years), Russia's gold holdings could theoretically reach 992.2332 (i.e., 1000 metric tonnes). If Russia continue to accumulate gold at that rate from the years 1953 to 1991 (i.e., 1077.28176 metric tonnes), the total would be 2069.51496 metric tonnes. If Russia's gold holdings accumulated at that rate from 1917 to 1953 (i.e., 1020.58272), then the total would be 3090.09768 metric tonnes. If Russia continued to accumulate gold at that rate from the years 1891 to 1917 (737.08752), then the total would be 3827.1852 metric tonnes. These calculations place Russia's total gold holdings, which are currently estimated at 2304.75 Tonnes, to be well more than is currently estimated. It is likely that Russia's total gold holdings range from 6,000 to 8,000 metric tonnes, thereby meeting or exceeding the US's total gold holdings. Articles published on Russia's gold holdings after the collapse of the Soviet Union estimate Russia's gold holding

a These may be added to Russia's overall holding.

U

Wagner () • Wagner's Ring Cycle celebrates its 150th anniversary during the fourth anniversary of the Ukraine war.

Walsh, David () • America's 21st century best art critic. In an unfortunate world, misfortune has made him a member of the police State bureaucracy's Socialist Equality Party (for which part of his career denunciation is the most proper appraisal) but his comprehensive knowledge of America, European, and other art is an invaluable contribution to understanding contemporary art. It should be bound into a collected work with a critical foreword, a Соченииния like the ones the Russians compiled. Around the time America began to produce movies from Marvel or other comics, Walsh's journalism had more than likely been instrumentalized for advice on how to inculcate false consciousness. The vast majority of the articles on movies, literature, or poetry Walsh produces after this period appear to be more of a mockery of the script flipping than a reflection of the earlier insightfulness he displayed prior to this period. If there is nothing good to criticize, then there can't be any good criticism.

In contrast with a few of the blocks of writing from the SEP, Walsh's writing passes over with little to no commentary. Most of his writing is purely Marxist. In contrast with many of the aspects of North's block of writing, which requires not only extensive knowledge of the history of the Trotskyist movement, America, or America's domestic intelligence agencies but extensive knowledge of the Bolsheviks, 1920s, or the later degeneration of the Soviet Union, Walsh's work happens to bypass much of the problem that work by other members of the SEP party presents.

To the extent that Walsh, for instance, has maintained the view that art is the cognition of life, his critique revives many of the great things from the 1920s the October intelligentsia bequeathed to humanity.

In an unfortunate world, misfortune has left Walsh without knowledge of Russian. Had Walsh known Russian, he might have had a chance to read one of the luminaries of the 1920 October intelligentsia. The 1920s celebrated the work of a great many authors whose works remained buried in enormous stacks of dead paper full of bookworms. Вячеслав Полонский, for instance, is one of the best Russian literary critiques from the roaring 1920s. His classic work, Очерки Литературного Движения Революционной Эпохи,[485] supersedes even Trotsky's famous, Literature and Revolution. Полонский is even one of the literary critics to critize critics like Trotsky. In his fifth chapter, Полонский, dedicates several sections to criticizing not only Trotsky's Literature and Revolu-

---

amounted no more than 240 metric tonnes. ["Much of Soviet Gold is Sold, Economist Says," Washington Post. September 28th, 1991], ["Soviets Sold Off Two-Thirds of Gold Reserves," LA Times. September 28th, 1991] These statements, however, occurred within the context of "relief" for debt payments on Russia's debts in the amount of 65 billion dollars to foreign governments, including 3 billion in overdue trade credits to Western companies. Given the Soviet propensity to askew statistics in favor of the union, credence is less likely than charlantry.

[485] The author possesses a first edition. The editions are apparently the following: 1st) Полонский В., Очерки Литературного Движения Революционной Эпохи. Москва-Ленинград, Государственное издательство , 1928, 334 с.; 2nd) Полонский В., Очерки Литературного Движения Революционной Эпохи. Москва-Ленинград, Государственное издательство , 1929, 334 с.

tion but the debates Trotsky had with fellow Russians like Богданов. Russians say little to nothing now about the great critic now but what he said in the 1920s remains revelvant for much of art today.

His writings on the horrible movie one of the female Russian film makers made about the Ukraine war suffers from a lack of objectivity but he hasn't had a chance to review all of the movies on the Ukraine war yet. Art has suffered tremendously during the Ukraine war. Nothing comparable to Picasso's Guernica comes even close to the Russian or Ukrainian art on the Ukraine war.[486] It is almost as though art has resolved itself to portraits, landscapes, or abstractions, a way for artists to drown out the surrounding reality crushing into the mind from all sides of the world.

War Mapper () • It may be that elements of the security elite attacked an account under the handle: War_Mapper. WM provided monthly updates on Ukraine's lost territory month over month. What is unique about WM's updates is how well programmed they were. His website provides tracking on "Overall control of Ukraine," recent "Changes to Russian held territory over last 12 months," " Control of Ukrainian Oblasts," such as Donetsk, Luhansk, Zaporizhzhia, Kharkiv, or "Control of Russian Oblasts" such as Kursk and Belgorod. WM began publishing on February 24, 2022 but abruptly stopped on April 9th, 2025. On April 9th, 2025 WM posted on X. The update described how "Russian forces advancing west of Nevske and Terny have reached and taken Katerynivka as well as positions along the Ukrainian fortification line in the area." In Zaporizhzhia, "Russia has taken the settlement of Lobkove," WM wrote, "after the recent capture of Stepove and Mali Shcherbaky. A Ukrainian counterattack into Shcherbaky has prevented its capture so far. Southwest of Pokrovsk, Russia has attacked towards, and come within 3km of, the Dnipropetrovsk Oblast boundary. In Belgorod, Russian counterattacks have pushed Popovka and Demidovka back to contested settlements. Russia crossed the Oskil again, this time at Kamianka. They now control or contest seven settlements on the west side of the Oskil. The situation in Toretsk is more clarified since the last post on the city. Though widely contested, Russian forces retained a presence in areas throughout the city. These have since come back into their control, and some forces have now moved northwest of the city." These updates were the last on the Ukraine war. Detailing the entirety of WM's contributions would require use of third party software such as TamperMonkey or ViolentMonkey to download, save or process.

WM's charts, built on the German company, DataWrapper, facilitated insights into Russia's positive stalemate on the frontlines following Russia's receipt of Ukraine's lost initiative in the aftermath of the bloody battle of Bakhmut-Artemovsk (See Bakhmut-Artemovsk above). It is likely that elements of the security elite attacked WM for publishing truthful information about the course of the war, a major transgression for the pro-Ukrainian supporters of the U.S-led NATO alliance, since truthful information about the course of the war inevitably points towards a Ukrainian defeat. Whatever the case may be, WM's disappearance after April 9th, 2025 indicated a major loss for the reading public's ability to analyze insights from information about the war's results quickly.

---

[486] Russian propaganda artists in the sphere of music produced a hilarious number of "hits" on the Ukraine war after the second anniversary. These hits touch upon a number of developments in the Ukraine war. "Geranium Blooms" (i.e., Цветет герань), one of the songs a band called Doors of Overton (i.e., Двери Овертона) produced, is a "salute" to the Russian acquired Shahed 131/136. Several other songs, many of which the leading Western experts in the area study of Russia, Ukraine or warfare, the military, intelligence or the Ukraine war have either never heard or ever mentioned. These are only a few of the pieces of "art" to surface during the Ukraine war.

Having fallen after Avdiivka and Vuhledar and Chasiv Yar and Toretsk, Pokrovsk represented the culmination of Russia's Кольцо operations. The capstone of these operations in the southeastern Donbas is Vladimir Putin's declaration that Ukraine's continued resistance shall result in the fall of more villages like Pokrovsk. Putin's admonition is reflective of Russia's reality on the battlefield. The negativity of the battles in the Donbas reflect the reality that the average rate of advance over time coupled with Russia's refusal to draw Kyiv's capital under fire control with artillery undermine Russia's ability to capture the right bank of the Dnipro, the area of Ukraine Putin highlighted as Russian during an interview with Tucker Carlson on February 9th, 2023. It is clear that Russia can capture villages but a large scale offensive to capture the right bank of the Dnipro-at the time of his statement-cannot be justified any circumstance related to Russia's current standing in the war. The fact that the single greatest threat Putin can make against Ukraine is the capture of one of its villages in southeastern Donbas therefore represents therefore a major turning point in the war.

Washingtonians () • Washington is one of the few states in America where the consensus against State income tax is not only generational but centennial. In 1934, Washingtonians rejected House Joint Resolution 11 by 57 per cent (against 43 per cent). In 1936, Washingtonians rejected Senate Joint Resolution 7 by 78 per cent (against 22 per cent). In 1938, Washingtonians rejected Senate Joint Resolution 5 by 67 per cent (against 33 per cent). In 1942, Washingtonians rejected a Constitutional Amendment (Article VII, Section 2) by 66 per cent. In 1944, Washingtonians rejected an Initiative to the People numbered 158 by 70 per cent (against 30 per cent). In 1970, Washingtonians rejected House Joint Resolution 42 by 68 per cent (against 32 per cent). in 1973, they rejected House Joint Resolution 37 by 77 per cent (against 23 per cent). In 1975, they rejected Initiative Measure 314 by 67 per cent (against 33 per cent). In 1982, they rejected Initiative to the People 435 by 66 per cent (against 34 per cent). In 2010, they rejected Initiative Measure 1098 by 64 per cent (against 24 per cent). In 2021, they rejected Washington Advisory Vote 37 by 61.05 per cent (against 38.95 per cent). Shortly before the fourth anniversary of the Ukraine war, Senate Democrats in Washington voted to advance their State income tax bill, the most unpopular bill in Washington State history, out of the Senate Ways and Means Committee, despite the bill's lack of popularity. More than 61,000 Washingtonians signed in to the Senate to oppose the bill, registering more than 76 per cent of respondents.

Based on these statistics, elected representatives, who are supposed manifest the expression of their voters' will in the very legislation and in that very legislature for which they were elected in the first place, ought to introduce for referendum not a new piece of legislation aimed at reiterating on past failures but an overwhelming history of negation. The Washingtonians ought to single out the narrow issue of State income to lay a basis for recall against any or all elected State representatives who oppose a State amendment unequivocally outlawing the introduction of legislation for a State income tax at all. The Senate Democrats who have thus far refused to heed the warning therefore ought to lose their seats through an immediate recall where the spearhead of legislation for the recall is not merely their lost seats but the introduction of an amendment outlawing State income tax. In that way it may finally don upon the State legislature and the State's legislatures that only voters and voters only are in change of both and only to the extent that both adhere to voters' and only adhere to voters may either continue to function, exist, or promulgate law.

Prior to the Civil War, the United States had no Federal income tax. Lincoln's request for Federal income tax met its later demise in an opinion the Supreme Court published under the title, Pollock v. Farmers' Loan and Trust Company 158 U.S. 601, April 6th, 1695 where the Supreme Court deemed the income tax imposed by the Wilson-Gorman Tariff Act to be "an unapportioned direct tax." Although the Federal government claims the Sixteenth Amendment to the United States Constitution "supersedes" the opinion, the opinion is more than ripe for review for two reasons. 1) Given the fact that none of the States followed the process for ratification with several States whose ratification must be rejected outright, the opinion merits further review. 2) Given the fact that the Federal government has sabotaged even well supported Amendments like the 28th Amendment for equality among genders, belief in the Sixteenth Amendment's ratification is, ipso facto, diminished. In the face of Donald Trump's tariffs, whose payment served as nothing less than "unapportioned direct tax" on top of existing income tax, inflation and the dollar's ever diminishing purchasing power, American citizens must maximize their demands from control over their income to control over the monetary policies that are at the heart of the country's finance. American citizens must demand that measures Jefferson, Jackson, and Lincoln introduced to safeguard the Federal government for the inevitability Hamiltonian monetary policies guarantee be implemented, or else cease any or all payments for anything in contract. Then and only then may the Federal government realize that governance is by a social contract and failure to comply with the social contract begets the application of Jefferson's recommendation for corrupt forms of government "to be altered or abolished."

It is important to understand that the source of the Federal government's ever widening expansion is derived primarily from its refusal to advocate for commerce, trade, or business. Prior to the Civil War, the United States functioned without a problem on the income earned from tariffs. It did not have the rolling bureaucracies the employment of which is by design directed treasonously against the U.S. Constitution's Bill of Rights (such as the Bank Secrecy Act whose passage legislated the systematization of a treasonous violation of the Fourth Amendment, for there is no reason, legal or otherwise, to believe that a transaction over 10,000 is by its very nature suspicious and hence may not therefore serve as a bureaucratic bypass to the warrant requirement). The Federal government's decision to drift away from an emphasis on commerce to taxation served ultimately to

---

[487] The Federal government's expansion of its vast, sprawling, ever widening police State bureaucracy with the establishment of secret anti-worker organizations such as the Socialist Equality Party or the Democratic Socialists of America is at its core, by design, or engineered predominantly "to stifle the economy." Strikes, labour organizations, or worker expressions of the First Amendment serve as part of the invisible hand on excess and unmitigated corporate, financial, or business irresponsibility and in many cases serve to facilitate innovation, invention, and discovery, for where there is a suppression of the First Amendment on one end, there is inevitably a suppression on the other. The resulting unchecked and imbalanced expressions of unaccountability now characterize America's market economy to such an extent that trillions of dollars disappear without a trace yearly. Moreover, an American can hardly create, run, or direct a business to success without the Federal government's weak, petty, passive aggressive, servile agents raising its digital footprint, raiding its trade secrets, or descending upon its leadership. Just as the Federal government's paranoia stifles graduate studies (with the United Auto Worker's institutionalization of police State terror at the level of the Department), the Federal government's aimless agents, whose entire livelihood is based off wages derived not from tariffs but taxes, thus undermine the

stifle the economy in more ways than one.[487] At the local, State, or Federal level, the overall emphasis within a government must be on commerce, trade, or business so that no government receives its money but from the transaction at the heart of that locality's economic activity. In that way, the largess and stifled bureaucraticism at the heart of governance may result but only from overwhelming prosperity.[488]

Water () • Water, one of the four elements the pre-Socratics held to be hule (i.e., thing).

During the Ukraine war, the struggle for global superiority led to a dispute over water. A significant moment in the struggle arose when China started building on the Yarlung Zangbo River in Tibet a mega-dam designed to become the world's largest source of hydroelectric power. The Yarlung Tsangpo is the highest river in the world, surpassing some 5,000 metres (16,404 feet) above sea level. China began construction of the mega-dam just 30km (18 miles) from China's vast border with India where tens of thousands of soldiers from both sides are posted. India disputes the border. In response to China's construction of the mega-dam India's Ministry of External Affairs ”urged [China to ensure that the interests of the downstream states of the Brahmaputra are not harmed by activities in upstream areas.” Water therefore became a significant flashpoint in the geopolitical struggle for access to, control over, or exploitation of sources of life such as water[489], raw materials, rare earths, or precious elements.

West African CFA franc () • The West African CFA franc is a fiat currency private central bankers in France whose numbers are beginning to dwindle as the CFA ceases to circulate throughout West Africa weaponize to subdue West Africa.

wealth () • In a study Oxfam published just before the fourth anniversary of the Ukraine war, the combined wealth of the world's billionaire became 18.3 trillion. The sum is larger than the GDP of a number of countries in the world.

WikiLeaks () • On October 4, 2006, Julian Assange, who catapulted mankind forward, founded WikiLeaks, an online repository for whistleblowers to deposit confidential, classified, or secret government documents. Over the last 20 years, Assange made a substantial contribution to the exposition of the fourth stage in America's declining superpower. The 20th anniversary of WikiLeaks falls on the Fourth Anniversary of the Ukraine war, during the fifth period in America's declining superpower.

Assange's video, ”Collateral Murder,” released on April 5th, 2010, represented a watershed moment in journalism. Assange's exposure of the helicopter assassination of innocent journalists in Iraq demonstrated the fraud by which America's ruling elite perpetuated the Iraq war, the catalyst for which became the orchestrated collapse of the Twin Towers. Based on a lie that Colin Powell adamantly per-

---

market economy. It is not merely that these agencies must be abolished, the “agent” mentality must be abolished, the systematization of a deprivation of the Bill of Rights must be completely abolished. It has to be that Freedom must at all opportunities overwhelm and destroy these agencies.

[488] The Bolsheviks, Lenin most of all, understood that the way out of the bloody Civil War would come not from taxation but commerce, trade, or business. The New Economic Policy, NEP, ushered into the nascent Soviet Union to overthrow the regime of War Communism, sought first and foremost to shift the government's focus in the economy away from the bureaucraticism required for the logistical support of a large war machine over vast swaths of Soviet territory towards inspiring workers to engage in creativity for the establishment of industries and businesses commensurate with the tasks of electrification and wide-scale industrialization.

[489] Water reminds us to take nothing for granted, especially exploration. In his exploration of The Mysteries of Nature and Art (1634), Newton explored John Bates' ideas thoroughly during his studies in elementary school, demonstrating how a pre-Socratic element may be more than merely an object of exploitation in a geopolitical struggle for dominance.

jured under oath before Congress, the Iraq war became one of the American ”forever” wars that not only drained the treasury but caused the Federal government to incur trillions of dollars in debt. The US succeeded with no more than the exchange of Sunni for Shia Islam in Iraq. The corporate controlled media, which refuses to subject the Federal government to meaningful criticism with investigative journalism[490], had no choice but to respond. It case a dark shadow over American journalism. It drew into sharp relief the conciliatory role America’s corporate controlled media plays. Assange’s video, far from merely exposing a heinous crime, exposed American journalism for what it is.

Assange’s journalism served to inspire many Americans to do great deeds for America. Chelsea Manning’s release of diplomatic cables, many of which are referenced here, served to expose the dialogue America’s ruling elite maintain for its expansive network of corruption in countries throughout the world. Manning’s diplomatic cables are often cited as one of the many causes responsible for the Arab Spring that started on December 17, 2010 when Mohamed Bouazizi self-immolated. Assange’s journalism inspired Edward Snowden. Edward Snowden committed one of the greatest deeds for America when he released his batches of confidential, classified, secret anti-American programs designed exclusively for the sake of subjecting each and every American citizen to a deprivation of his or her rights under the Bill of Rights. Snowden’s journalism reduced the lie often peddled in America’s media about freedom to a contraption the police State bureaucracy flexes electronically to track, identify, record, analyze, or exploit for anti-American activity. Assange encouraged the development of scientific journalism, reading news from one end of the globe to the other. Assange is undoubtedly the greatest journalist of the early 21st century.

The illegal, corrupt, anti-Constitutional persecution Assange suffered at the hands of America’s ruling elite did more to undermine America’s image, prestige, or facade of justice than to harm Assange. Assange emerged innocent, free, ready to return to journalism.

Wizner, Ben () • Ben Wizner, Edward Snowden’s lawyer, whose birth corresponded with the Nixon’s decision to terminate America’s gold standard, rightly declared on the 25th anniversary of September 11th, which corresponded with the fourth anniversary of the Ukraine war, that the Federal government exploited the tragedy to widen police State powers in opposition to the U.S. Constitution in an interview Al-Jazeera[491] recorded for a documentary on the subject published on September 11th, 2026. 2026 represented Wizner’s 25th anniversary for his work with the American Civil Liberties Union (ACLU) which from time to time colludes with the US Federal government to terminate cases in its favor. In an article published on August 30th, 2016 under the title, ”Edward Snowden’s Long, Strange Journey to Hollywood,” The New York Times declared how Wizner ”has become a figure of not insignificant geopolitical importance.” Sadly, Wizner, whose dedication to defense is unparalleled in America’s thoroughly corrupt judiciary, has not written a book. In fact, he has written surprisingly little. If he were to publish a book, there is reason to think that book might be extremely popular.

Wolff, Martin () • Martin Wolff’s four part course is an excellent introduction to Marxism. Wolff’s commentary is not just entertaining but enlightening. Absent a component for practice, applied principles, or an active perspective, Wolff falls short of the leadership labor requires for the future.

---

[490] 60 Minutes, for instance, is a carefully choreographed spectacle.

[491] وكالة الاستخبارات المركزية ما بعد سبتمبر

Wooldbridge, Michael () • Michael Wooldbridge is one of the founders of Artificial Intelligence who distinguishes himself from contemporaries like Eric Schmidt, an AI extremist, by his firm grasp on the limits of AI. Whereas many like Eric Schmidt attribute consciousness to machines, Wooldbridge does not. Wooldbridge, for instance, does not believe that the latest version of ChatGPT reasons. He believes that the responses ChatGPT produces are not a reflection of reason but pattern recognition. The ChatGPT machine is able to mimic the responses of the large body of data.

The problem with Artificial Intelligence is not necessarily the data but the first principles upon which builders rely to create machines like ChatGPT. The widespread reliance on a binary number system is responsible for the limitations of its logic. The binary number system lends itself to a logic where the primary mode of evaluation is nothing but a single choice: either the unit or its negation. Logic like propositional logic is precisely the type of logic that relies on the same. In a situation where there is no middle term, the limited logic of the machine cannot progress syllogistically. In the absence of a syllogistic type of logic, the ability to move from a minor to a major premise does not happen. Hence the machine's first principles are responsible for its inability to reason. Succinctly put, ChatGPT cannot reason for lack of a middle term.

A machine whose logic avoids Leibniz' binary number system logic[492] can be based on James Clark Maxwell's understanding of colors.[493] In Maxwell's systems, there are three primary colors, Red, Green, and Blue. In much the same way that the Chinese have utilized DNA to record information on cassette tapes[494], the three colors, whose unity is white, produce four terms. A fifth term may be the deprivation of the four. A Maxwellian type of color-based storage could easily meet or exceed the storage power of DNA, since marking for DNA consumes more space on a ribbon in a cassette than color. Color on film would easily store far more than DNA on a cassette's ribbon, just as GAF viewers such as the "Pana-Vue 1" or "ViewMaster" demonstrate. Hence even in the area of data storage, which the repudiation of Leibniz' binary number system has already confirmed the extensibility of a non-binary system, Maxwell's color system may provide for greater computational power (being able not only to compute but to store information) than preceding types of computational systems.

---

[492] In an interview at AI's Next Frontier, Geoffrey Hinton advanced the hypothesis that mathematics is a closed system like chess; he further claim that since AI play chess, AI can play mathematics. He further claimed that "I think that AI will get much better at mathematics than people, maybe in the next 10 years or so." Hinton's assertion is highly reductive. There is nothing closed about mathematics. You can try to reduce mathematics to a closed system but Godel's incompleteness theorem obliterate the idea of "closedness." Hinton's statement is tantamount to Hilbert's program. Godel completely disabled the project to find a complete and consistent set of axioms for all mathematics. Godel's theorems prove its impossibility. Gödel's incompleteness theory proceeds on the basis of two theorems. The first says that in any sufficiently complex mathematical system, there are true statements that cannot be proven within that system. Lobachevsky's substitution of Euclid's fifth postulate for his own is an example. Like in Euclid's own system, no consistent set of axioms can be both complete and capable of proving all truths about geometry. The second theorem asserts that such a system cannot prove its own consistency. Euclid's system cannot guarantee the deductive logic of truths subsequent to the axiomatization of the fifth postulate. The insistence on a set theoretic approach to thinking about mathematics is simultaneously a blessing and curse; a blessing for its brevity, expressiveness, and convenience; a curse for its confinement of the mind to the species of modus ponens and their genera. This is set theory, propositional logic, and the Principia Mathematica overthrowing intuitive, progressive, unified consciousness. The major way forward in AI is to find a way to dispense with Leibniz's binary system of 1s and 0s to a new way of counting; a logic with rules other than those in propositional logic with rules such as modus ponens, modus tollens, hypothetical syllogisms, disjunctive syllogisms, constructive dilemmas, conjunctions, absorption, simplification, or addition must give way to a new way of computing.

[493] Optical Circuit Switching (OCS) is one of the technologies at the heart of a revival in light but they have yet to transform fully the implementation of Maxwell's discovery of light in relation to color where the real breakthrough in computing will meet with the speed of the one universal constant quantum physics cannot invalidate.

[494] In an article under the title, "A compact cassette tape for DNA-based data storage," published on September 10th, 2025 in Science Advances, a team of Chinese scientists, who are far more productive than Americans, produced the first ever DNA-based data storage on a number system unrelated to Leibniz' binary number system. Americans could never achieved such a thing because America's police state bureaucracy, of which the Socialist Equality Party is an essential component, seeks to undermine its own citizens by transforming political dissidents into targets the Federal government exploits for the sake of laundering hundreds of millions of dollars on " investigations." America's insistence on wastefulness is extremely advanced, since the Federal gov-

WWII () • On January 12th, 2026, more than a month before the fourth anniversary of Ukraine's war, Russia's full-scale invasion exceeded the number of days the Soviet Union required to defeat the Nazis during World War II. An article in the The Economist discusses the grim milestone in detail.[495] While many of the claims in the article are indisputably valid, the lack of any attention towards the conversion of space into deposits of raw materials, precious elements, rare earths, or critical minerals misses the mark. The territory Russia seized is so full of wealth that any failure to mention the acquisition undermines historical analysis.

X

X () • X, the platform formerly known as X, is where the vast majority of the information from secondary commentators, commenting on information from Telegram or directly from Russia's or Ukraine's frontlines, publish most or all commentaries. While institutes usually publish directly from the institute's website, the first priority is to advertise its publication on X. The news agencies, such as the New York Times, the Guardian, Financial Times, Wall Street Journal, Foreign Policy, Foreign Affairs, The Economist, or other publications, advertise publications immediately through X. It is one of the greatest sources of information on the Ukraine war. Although primary sources publish almost exclusively in Telegram, X is second to none for discovering commentary.

It is the only place on earth where journalists, open source investigators, commentators, or analysts can openly engage in debate without reprisals. While the ruling elite from one country to the next is unified in its ambitious pursuit of control over any or all thought, X allows much to escape the clutches of what Julian Assange calls the "security elite."

There are signs that the "security elite" has targeted specific members of the X community for expressing points of view in contradiction with the security elite's requirements for the preservation of conformed thought on the platform but X did not play an active role.

X Article () • George F. Kennan, one of the most extreme anti-

ernment's police state organizations such as the Socialist Equality Party have infiltrated American universities with the a fellow police state organization, the United Auto Workers union. The UAW fulfills the function of an Orwellian thought police on graduate students so that laboratories in Computer Science, Artificial Intelligence, or Information Technology never benefit from the talented appreciation free thinking graduate students are entitled to enjoy in a true democracy. The money that America must spend on agents from the UAW to police graduate students is wasted on non-productive surveillance.

[495] ["The Day Russia's War Collided With History," The Economist. January 30th, 2026]

communists in terms of his refusal to recognize the communist elements inherent in the devolution of America's own government, even after the serendipitous position the US inherited from the victory the Soviet Union secured over Germany in its resounding defeat against the Nazis. In response to Kennan's inquiries about the implications of a speech Joseph Stalin delivered at the Bolshoi Theatre on February 9, 1946, the night before the symbolic 1946 Supreme Soviet election 1946, Kennan produced what is called the long telegram, formally identified by Kennan's State Department number, ”511”. Kennan later received permission to express a few of the ideas from the long telegram in an expanded article for Foreign Affairs. The article became known as ”The Sources of Soviet Conduct”, commonly referred to as the so-called ”X Article,” since wrote the article under the pseudonym ”X.” He published the X article in the July 1947 issue of Foreign Affairs magazine, whose date of publication now celebrates its 80th anniversary on the fifth anniversary of the Ukraine war in 2027. In the ”X” article, Kennan amplified his call for a strategy of ”patient but firm and vigilant containment of Russian expansive tendencies” through the ”adroit application of counterforce at a series of constantly shifting geographical and political points.” Widely circulated among anti-Communists in the State Department, Kennan's article earned him acclaim in the eyes of his colleagues, who promoted him to the position of the head of the State Department Police Planning Staff from 1947 to 1950. Called the father of containment, Kennan erroneously believed that ”counterforce” played a role in demise of the Soviet Union, whose collapse Leon Trotsky predicted nearly 9 years before Kennan began to debate in the rhetorical devices of sophistic verbal statecraft.

Xiaochuan, Zhou () • On March 23rd 2009, Zhou Xiaochuan, Governor of the People's Bank of China, published an essay under the title, ”Reform the International Monetary System.” In his essay, Xiaochuan argued for the establishment of a new international monetary system based on a super-sovereign reserve currency unit. Xiaochuan took inspiration from John Meynard Keynes who proposed just such a unit under his proposal called, ”Bancor,” based on the value of 30 representative commodities.[496]

In his essay, Xiaochuan does not explicitly call for a gold standard, although Xiachuan mentions Bretton Woods in his essay. Xiaochuan's description of the SDR appears to have been a cleverly designed rhetorical stratagem to disguise a Chinese desire to escape the SDR system the West imposed on China without relief. At the time China had little choice but to hold the bulk of its 2,000 billion of foreign exchange reserves in US dollars, although the Financial Times claimed at the time China could foresee no change in the near future.[497] Xiaochuan called for the International Monetary Fund to legislate Special Drawing Rights for China. Introduced in 1969 ahead of the Richard Nixon's decision to disable the fixed exchange rate regime the dollar-gold convertibility preserved until its collapse on August 15, 1971, SDRs served largely to guarantee the power the economies the governments issuing these currencies sought to preserve. At the time of his essay, the value of SDRs, based on a basket of four currencies, the US dollar, yen, euro and sterling, had just emerged from the greatest crisis ever witnessed in the West.[499] The IMF view Xiaochuan's proposal with horror. China's proposal, for instance, would have expanded that basket of currencies from within the ambit of the G7 to the Renminbi, allowing a currency other than the West's to settle contracts for major commodities. Xiaochuan's silence about a gold standard could not have been but a technical artifice, exemplifying just how exceedingly far sighted Chinese intelligence truly is. Xiaochuan's essay is therefore a profoundly understated signaling device the secretive Chinese communist party sought to exploit for short-term, temporary, ephemeral relief for a problem the Chinese had already solved. Now Xiaochuan's silence reverberates through the Heptatonic scales with an extraordinary bullseye on the great Eurasian gong

---

[496] Xiaochuan's analysis, however, is may be rooted in an economic theory far deeper than Keynes' proposal. A proposal for a ”basket of currencies” comes from Benjamin Graham's idea for “commodity-unit” currency. The plan Graham advanced in the 1930s revolved around a ” commodity-unit” currency. At the time, the currency in question represented 23 grams of gold so Graham proposed that his new form of currency represent a basket of 23 commonly used commodities: ”23 small quantities of different basic raw materials,” as he put it, ”tangible, basic goods that we use and need, in their proper relative amounts.” Graham first published these ideas in the Spring 1933 issue of the Economic Forum, with the title ”Stabilized Reflation,” which would later become the basis of ”Storage and Stability.” In World Commodities and World Currencies, later published in 1944, Graham expanded the concept to an international system that would help prevent the currency wars and protectionism that played a role in instigating World War II. The Nobel Prize-winning economist Friedrich Hayek, whose idea of capitalism hasn't confronted its reality, wrote a lengthy article that endorsed Graham's commodity reserve currency. John Maynard Keynes wrote to Graham expressing agreement with an important aspect of the plan: ” On the use of buffer stocks as a means of stabilizing short-term commodity prices, you and I are ardent crusaders on the same side.”

[497] By the fourth anniversary of the Ukraine war, China had already successfully inverted its

---

2,000 billion of foreign exchange reserves in US dollars with gold. China not only inverted its foreign exchange reverses but the foreign exchange reserves system with the announcement on July 7th, 2026[498] that the Hong Kong Precious Metals Central Clearing Company would supplant the dollar in international exchange with gold.

[499] The yield curves for bonds in these currencies, all of which are in a deep state of danger now, increasingly endanger the viability of fiat currencies for the G7 for SDRs but the G7 nations, whose governments print these currencies ad infinitum under a collapsing roof of dilapidating sovereign indebtedness.

[500] Speculation on the price of gold continues to be placed in dollars but dollars are irrelevant. At the time that oil began to trade on July 1st, 1944 (the first day of the Bretton Woods conference), the price of Brent crude had reached no more than 1.21 (i.e., a ratio of 35 dollars to 1.21 becomes 28.926), which is by a factor at 7/9 equivalent to the price of the gold to oil ratio such that (28.926 * 85.63 =2,476.933), meaning that the price of oil must rise in proportion to the current price of gold for the original ratio of gold to oil to obtain (i.e., the ability to purchase no fewer than 28 barrels of Brent crude with a single troy ounce of gold). Since the original ratio of gold to oil obtained at the time the Bretton Woods conference began, the gold to oil ratio is far greater indicator for the viability of the price of gold for a standard than the dollar (which is irrelevant). The price of oil must reach the level at which oil traded in the aftermath of the Great Financial Crisis in 2008 when the price of WTI Brent crude reached its highest level at 147.27 on July 11th, 2008. At that level, gold becomes a multiple of the ratio at 4259.93202, which is more or less equivalent to the existing price (i.e., after the termination of the Iranian Memo of Understanding). It is unlikely that gold separates so far from oil as to allow a person with a troy ounce of gold to purchase hundreds of barrels of oil so either the price of gold must fall or else the price of oil must rise. At 38,000, for instance, a troy ounce of gold would purchase more than 465.12 barrels of oil at a price equivalent to 81.70. If 28 is not the correct ratio, certainly the original ratio is far more predictive than 465.12. It seems more logical to assume the opposite. A 38,000 price for gold entails a price for oil that would be closer to maintaining the original ratio than any thing else (i.e., the dollar becomes irrelevant). Accordingly, the unit against which the price of gold must be measured for global trade must not the dollar, whose inevitable death the collapsed dollar cannot avoid, but a commodity like oil, whose historic relationship to gold is well established. An another example of the inversion is that the traditional ratios relating gold to oil have become inverted. A barrel of oil used to trade at 28 to 1 Troy ounce of gold. At the current price of gold, the ratio reduced significantly. On January 29th, 2026 a barrel of Brent crude at 66.6 per barrel traded to a Troy ounce of gold (i.e., 5,595.07) at 84 barrels, turning the old ratio on its head by three. It tripled the original trade for oil when gold served as the gold standard on July 1st, 1944, the first day of the Bretton Woods Conference, which is where the US is headed now, like it or not. In previous conflicts such as the 2008 Great Financial Crisis (GFC), the inverse occurred. The rising price of oil inverted the ratio, causing a barrel of oil to trade at a discounted ratio. A barrel of oil traded at 147.27 to a Troy ounce of gold (i.e., 964.70) at 6.5505534053, thereby reducing the ratio to a fourth of its original proportion. If you compare the situation, the inversion of the ratios at which a barrel of oil trades to a Troy ounce of gold underscores the degree to which the present crisis is far in a way different from any previous financial crisis the US has faced. This inversion,

of history.[500]

Xuwei Nuclear Heating and Power Plant () • Just weeks before the third anniversary of the Ukraine war's fourth anniversary, concrete pouring for the nuclear island of Unit 1 at the Xuwei Nuclear Heating and Power Plant began. On Friday, January 19th, 2026, in Lianyungang, China's eastern Jiangsu Province, the first nuclear power unit to break ground in China thus began to be built. In the opening year of the country's 15th Five-Year Plan but on the heels of a trade surplus of world historical significance in the amount of 1 trillion 200 million dollars, China celebrates beginning construction on the world's first large-scale project to couple nuclear energy with petrochemistry.

Y

Yemen () • During the third anniversary of the Ukraine war, Al-Jazeera published a post with a video no longer than 17 minutes on X. In the video the Qatari news channel described the first proxy war in the Middle East.[501] The video picks up right in the middle of Great Britain's occupation of Yemen when on the December 10th, 1963 the so-called Aden Emergency erupted. The video's first document is from April 22nd, 1964 when Great Britain decided to make contact with Israel in regard to Yemen. Penned to the SAS Squadron in Aden, the document outlines Great Britain's Secretary of State's approval for the creation of the Aden Group, a joint military intelligence group designed to coordinate Great Britain's activities with Israel for a mutually beneficial outcome for both parties. Great Britain's members joined the Aden Group from the Suez Group after Abdul Nasser nationalized the Suez Canal. Considered to be the last remaining vestage of Great Britain's Empire from the outcome of World War II, Yemen represented a number of problems for the SAS, whom the local Yemenis considered to be an occupying force. In what follows, the narrator explains how Yemen became the site of the Middle East's first proxy war with minor great powers, Israel and Egypt, funding one or more of the conflicted sides in Yemen to assert control over the country as a sphere of influence for a major power. The Egyptian army was fighting with the Yemeni republicans against the monarchists, whom the Aden Group sought to support. The Union of Soviet Socialist Republics supported Egypt; Great Britain supported one or more of the factions in Yemen.

The result of the Aden Group's first meeting resulted in Israel's first mission outside of its geography; Izthak Rabbin dispatched Zeev Liron, a fluent Arabic speaker, to fly undetected from Israel to Yemen for two things: 1) to confirm that a rebel tribal force in support of the Yemeni monarchy under Imam Hadr al Badr could actually fight against the Egyptians; and 2) secondly, Liron needed to confirm that the Badr intervention could be effectively executed without Egyptian interference. Based on a post unreleased operation report, Rabbin authorized the attack in support of Badr.

On March 31st, 1964 a squadron of Israeli fighter jets left Israel from Israel's Tel Noof airbase south towards Yemen's Sanaa; the Israeli fighter jets were instructed to land in Djibouti,

---

which comes on the heels of a number of inversions of world historic significance, indicates that the crisis is unlike anything the US has ever in its history.

[501] "أول حرب بالوكالة في الشرق الأوسط".. المتحري يكشف جذور اهتمام إسرائيل باليمن وسعيها ألا يكون البحر الأحمر بحيرة عربية، وكيف تحوّل باب المندب إلى واجهة بدلاً من شبه جزيرة سيناء [AJArabic:2009598633453482113]

[502] The video displays a newsreel with Moshe Dayan with his famous eye patch, saying that

Ethiopia[502] only to return north according to the same route. The mission focused on dropping weapons, the serial numbers of which specialists removed prior to the mission, for the sake of arming the Badr rebels with unrecognizable weapons that could not be traced back to Israel; most the weapons came from stockpiles of Nazi World War II weapons such as the heavy 81 mm mortars, such as the MG-42 machine gun, German luger 9 mm pistols, or British Enfield rifles.

The Israelis sought to exploit the Yemeni conflict to weaken further the Egyptians, who became ever more bogged down in a fight against the Yemeni monarchists. With Egypt weakened, Israel gambled to reduce the risk of a renewed armed conflict with Egypt after the 1956 war. Weakening Egypt, however, was not the only goal. Upon the promise of a restored imamate, Badr royalist vowed to recognize the state of Israel.

After the Egyptians lost the Sinai peninsula in 1967, the Egyptians turned south. The Egyptians were no longer able to block the Straights of Tiran due to the loss so the Egyptians sought to focus on Bab-al Mandeb where the conflict shifted. The video details how the wider implications of Israel's proxy war with Egypt in that area touched upon a more global struggle the Union of Soviet Socialist Republics raised with the West under the leadership of the United States.

the video documents the involvement of the Palestinian Liberation Organization on an oil tanker transferring oil from Iran to Israel called the Coral Sea.

The video ends with the Yom Kippur War on October 6th, 1973 where Egypt successfully recaptured the Suez Canal in a surprise attack, disabling Israel's ability to execute its strategy for weakening Arab control over the most important parts of the Arabian Peninsula, namely, the Suez Canal, the Straight of Tiran, Bab-al Mandeb, or the Red Sea in general.

Yevamot () • After the long series of wars Israel fought during the Ukraine war, the first of which began after the bloody October 7th terrorist attack, the Israeli community's leading intellectuals began to revisit aspects of the Jewish tradition, especially in regards to polygamy. Versed in the language, history, thought, or practice of Islam from its neighbors, some friendly, some inimical, many Israelis have begun to question whether or not the European style of marriage is the most optimal way to live a Torah-true lifestyle. Some, especially those versed in the laws of exponential growth[503], have begun to view marriage from a Malthusian perspective; if the State of Israel faces a major demographic challenge in the next few decades from the Arab birthrate, compounded by unrelenting warfare on all borders, the prospect of denying the Islamic habit, practiced extensively throughout the deserts most famously by Bedouins in the Levant, no place in Israel's own society is under fire. While women staff Israel's military, the majority of the soldiers are males; with high casualties resulting from the relentless warfare, the demand on the dwindling supply of Israeli males has made the idea of polygamy far more congenial than in years past. The ideas of Yevamot have suddenly begun to circulate in circles on social media circles with far more greater frequency than in previous years.

Юшманов, Н.В. () • Юшманов, Н.В.'s textbook on the Russian language (i.e., *Грамматика Литературного Арабского Языка*) from 1928 celebrates the 100th anniversary of the first textbook for Arabic in the Russian language from 1827 (i.e., В. Болдырев. *Краткая арабская грамматика в таблицах.* Москва.). In

---

Israel had a cooperation with Ethiopia for years and years. One of the witnesses explains how the Mossad maintained large bases in Ethiopia and Nairobi.

[503]

2027 and 2028, the fifth and sixth anniversaries of the Ukraine war, these textbooks celebrate their 100th and 200th anniversaries.

Юшманов, Н.В.'s text is comprehensive; his text covers the major aspects of the Arabic literary language. It discusses the tri-consonantal root system within the context of Semitic; it details Forms I through XV for the Arabic verb with all of its peculiarities (pg. 23). It discusses forms of speech such as the noun, adjective, or adverb (pg. 58). It discusses the formation of the plural such as the broken plural (pg. 64). It discusses the case system (pg. 73). It discusses numbers (pg. 81). It discusses prepositions (pg. 92). It discusses interrogatives (pg. 115). It discusses all the aspects of Arabic grammar required to study the vocabulary for reading or speaking fluency. It is thus a complete textbook of the Arabic language. Intended to be a manual for an instructor to teach Arabic, Юшманов, Н.В. is an advanced comprehensive overview of Arabic literary grammar.

Юшманов, Н.В.'s exposition of the literary Arabic language is consistent with German scholarship into diaglossia at the turn of the 19th century, thereby placing Юшманов, Н.В.'s contribution to Arabic dialectology well within the ranks of the leading scholars of the Arabic language at the time of book's publication. At the time of its publication, no competing exposition of the Arabic language existed in Russian or Russia. Given the fact that Russian served as a lingua franca for most of the continent at the time, Юшманов, Н.В.'s text certainly contributed to the early study of the Arabic language and Arabic dialectology in Russia, if not Eurasia.

Ypi, Dr. Lea () • Dr. Lea Ypi is one of the few female in the 21st to survive a highly predatory academia to publish a defended Ph.D. thesis upon receipt of her degree. While the modern world has accomplished a great deal on the order of female biology, the decision to treat women just like men in academia disregards these accomplishments, for a woman's biology is fundamentally different from a man's. A girl at the age of five, for instance, is considered an equal to a boy at five, when in all reality the former's biological clock runs nearly double or triple the time that a boy's clock runs; the cumulative effect is that academia, a slow, arduous, retaliatory apparatus the State weaponizes to extract life from brilliant human beings, exacts double or triple the toll on women than on men. A man may finish his academic career with a prospect for a family; a woman may finish her academic career with a prospect for menopause; the contrast cannot be underestimated, especially in the toxic climate of the West's modern academia. Despite setbacks, Ypi managed to graduate, although not without multiple additional degrees. Ypi is thus a role model for women, while academia may reflect less on her work than on reform; for faster admissions with faster graduations would significantly ameliorate the plight of the female academic. An intelligent woman should not be made to sacrifice her femininity for the sake of academia's slow, arduous, retaliatory apparatus. It should bloom with her work on a Spring schedule.[504]

In her Ph.D thesis, Ypi focuses on the so-called cosmopolitan state from the perspective of European analytics political philosophy. While describing the state[505] without any reference to any of its features[506], Ypi relates the state to cosmopolitanism. It is hard to understand how the cosmopolitanism of one State cannot be so strong that the cosmopolitanism of another marks a point of differentiation so prominent that the states become undoubtedly differentiated. The idea that the State may treated like a unit confounds the modern understanding of the State, for no State is created equal, equal, or equalizing.

---

[504] If not mentally traumatized, raped, or murdered, women have an exceptionally hard life in academia. On a faster biological clock, males in academia easily exploit female anxiety over the timeliness of their graduation to inflict pain with psychology. A delay in academia, for instance, is often double, if not triple, the impact for a woman than a man. The effect on woman can be life-altering, to say the least.

[505] Since Hegel's Philosophy of Right, no one can say anything about the State unless he or she says something about the Philosophy of Right.

[506] The idea of a State is a profound. In the 20th century, the Bolsheviks not only came to power

In terms of Ypi's later works, Ypi exhibits a common reflex in academia. The reflex is to daydream about the past. Academia bypasses the three hundred years after Kant to consider only Kant's Zum ewigen Frieden. Ein philosophischer Entwurf from 1795 so that the scholar may close his or her eyes to the reality of contradictions Hegel's philosophy introduced forever hereafter into every aspect of modern life. The reliance on Kant's dream for a perpetual peace based on Kant's philosophy with devices like the categorical imperative make for excellent headlines but little to no substance for a resolution of the problem, for just as the categorical imperative dissolves, the dissolution of Kant's ideas of the State dissolve. The inescapability of the dissolution is as profound as the consequences of its dissolution, not just for philosophy but for the past three hundred years. These are years of the most profound warfare in mankind, the likes of which only an implementation of Hegel's philosophy unlock from the complex of contradiction.

Z

Zaslon-M radar () • With the R-37M missile at their disposal, Russian MiG-31BMs equipped with the Zaslon-M radar have been able to fire at Ukrainian aircraft from very considerable distances, since the beginning of the Ukraine war, without entering any of the areas in which the Ukrainian anti-aircraft defenses were operating.

Nonetheless, the Zaslon-M radar, equipped on MiG-31BM interceptors, demonstrates how dependent the modern Russian war machine continues to be in its reliance upon the almost unrivaled treasure chest of discoveries, inventions or ideas the Soviet Union bequeathed its usurpers upon collapse.

Zembla () • Zembla, a French comic book character August Pedrazza and Marcel Navarro created in Spécial Kiwi No. 15 in June 1963. Published by Éditions Lug (later Semic), Zembla is a "Tarzanide" whose superpowers are superhuman strength, agility, and the ability to understand animals. Created to compete with the Italian character Akim, Zembla grew up with lions in the fictional African country, Karunda. He

---

on the basis of their understanding of the Russian state such as is described in Trotsky's Results and Perspectives (1906) but dissolved into warring camps over its centralization (i.e., bureaucratic or democratic), its economy (i.e., for a New Economic Policy or forced collectivization), or its underlying role for the spread of revolution (such as in a series of countries, the most salient example of which is Germany) but in these explorations of the State a fundamental feature of the State is its contradictions, primarily in terms of Trotsky's theory of the political form of nation and state and its inherent contradiction with the ever increasingly globalized world economy. In terms of its existence alone, Trotsky wrote how "[the] nation must continue as a cultural, ideologic, and psychological fact, but its economic foundation has been pulled from under its feet" by way of war. The "objective significance of the War [World War I] is the breakdown of the present national economic centres" with the "substitution of a world economy in its stead." The political form of nation and state proposed to solve the problem of imperialism "imperialism" was not through the "intelligent, organized cooperation of all of humanity's producers" but the exploitation of the world's economic system by the capitalist class of the victorious country," where the political form of nation and state is "transformed from a Great Power into the World Power."

is known as the L'homme-lion. His companions include the magician Rasmus, the child Yéyé, and animals like the lion Bwana, the kangaroo Pétoulet, and the cat Satanas. The original series ran until the 1980s; Semic, however, revived the character in 2000 with a new backstory identifying him as Pierre Marais, a dual French-Karundian national. The pre-Semic comics are a key resource for understanding the French language.

Ziegler, Günter () • Ziegler, Günter M. together with Aigner, Martin produced a book dedicated to the most elegant demonstrations of solutions to problems in mathematics. Published in 1998, the BOOK, as the famous mathematician, Paul Erdős, envisioned the title, contain summarizations of proofs from books. Grouped into five parts, number theory, geometry, analysis, combinatorics and graph theory. The book has passed through six editions from 1998 to 2014.[507] Ziegler's book is certainly a major contribution to the discussion of mathematics.

The chapter on number theory is by far the most fascinating. It is the most fascinating for a number of reasons. The first reason is that the book presents Euclid's theorem on the infinity of prime numbers from the prospect of set theory. Euclid did not envision prime numbers in terms of sets, since sets did not exist at the time Euclid composed the Elements. The way Euclid's thought advances is thus fundamentally different from the way set theory operates on numbers. Euclid proved the infinity of prime numbers not by way of counting, zero, one, two, or three; he did not prove his theorem on the infinity of prime numbers by reference to any number at all; Euclid proved his theorem about infinite primes by way of reference to points, lines, and planes on givens in specific proportions. It is important to emphasize this primary difference for two reasons; the reasoning of the ancient Greeks did not proceed in terms of quantities; the idea of magnitude, the likes of which requires a stability incompatible with ancient Greece, did not figure prominently, if at all, into the abstract objects of the ancient Greeks. The ancient Greeks thought in terms of analogy[508]; the idea of magnitude is only cognizable in terms of pairs of entities, whose relationship may be replicated or manipulated to such an extent that the property in focus shifts from one pair of compared objects such as line to that of another; in Euclid's proof of prime numbers, he makes no mention of counting at all; he mentions only a comparison of pairs of compared objects in an analogy. Elements, Book VII, Pr.31, for instance, relies less on reductio ad absurdum than on the pairs of compared objects in an analogy. Euclid's reliance on pairs of compared objects begins with the first proposition in the seventh book; the words ”lesser” or ”greater” both presuppose sets of compared objects. The latter end of the proposition relies upon a new set of compared objects in an analogy: ”if the number which is left never measures the one before it until a unit is left, then the original numbers are relatively prime.” The idea of a prime number, for instance, is thus relational; it is not only relational in terms of points or lines in a plane; they are relational in terms of the conceptuality of the differentiated idea of a number. The fact that neither Ziegler nor Aigner make no mention of Euclid's methodology demonstrates that these mathematicians have not taken note of the profound role method has played in the Enlightenment, if not the trajectory of mathematics; still more, the authors have not conveyed the original thought processes of Euclid's own method. This is a fundamental error for a book dedicated to the elegance of proof. It is actually far worse. The idea of a symbolic approach to Euclid's proof thoroughly undermines the ancient Greece insistence on speech; the ancient Greeks believed the idea of the written word merely reflected the ideas human beings exchanged verbally; it is not merely a nuance but a reflection of Euclid's explanation of things said; it is not a reflection of Euclid's explanation of things symbolized; Euclid did not envision mathematical entity in terms of symbols. The symbolization of mathematical entities is as inimical to the provision of demonstration as diagrams. Euclid explained ideas in ordinary, everyday, ancient Greek.

[508] It is alleged that Aristotle devised fourteen different ways to invoke the so-called "necessity" of a demonstration. If any discussion in the history of the science of logic ever touches upon the idea of "necessity" Aristotle invokes to certify the irreversible requirement for admission of a logical inference. The idea that an inference may result in one and only one inference is the fundamental rule of Aristotelian logic. Is the necessity by which Aristotle's fourteen laws on the syllogism equivalent to the necessity by which Euclid's demonstrations require the admission of a logical inference without alteration? Can Euclid's necessity be reduced to Aristotle's? Is there a difference in the necessity? What is necessity? Are Aristotle's or Euclid's necessity without parallel to anything else in the sciences? The ancient Greek resistance to an expansion of the concept of analogy is firmly rooted in necessity. Analogy is but one of many devices for reasoning, many of which Aristotle himself elaborated. The Greeks, for instance, would have never agreed to make a logical device like "Analogy the Core of Cognition," as Douglas R. Hofstadter does in a lecture under that tile for a Stanford lecture on February 6th, 2006, nearly twenty years ago. Despite the lack of any antecedent example for the primacy of analogy in Aristotle's or Euclid's work, an expansionist view of the analogy for cognition is, nonetheless, a fundamentally limiting reductionism for consciousness, as cognition relies on far more than merely analogy, especially in the Greek mind.

The second problem is with infinity itself. The third reason is that the first chapter hardly discusses the idea of the infinity. While familiarization with Euclid's demonstration on the infinity of prime numbers might compel readers to imagine infinity from the opposite of the necessity in Euclid's demonstration. The development of a progressive infinity based on the impossibility of a reductio ad absurdum undermines the moments in the cognition of an expanding idea of infinity.

It seems odd that Paul Erdős, who would have undoubtedly marvelled at the Dedekind Schnitt, would not have mentioned Dedekind's famous proof, differentiating the real numbers by way of a division from the rational numbers. Dedekin's Schnitt proceeds more like a construction than a demonstration. Dedekind's comparison of two sets thus gave rise to his understanding of a lesser compared to a greater infinity. In his definition of an infinite set, for instance, Dedekind described a set as infinite when it is ” similar to a proper part of itself.” The self-reflective construction of infinity thus separates contemporary number theory from ancient number theory by virtue of method but not merely in terms of the theoretical framework but within the progression from one mathematical entity to the next such that the former may be set up against the latter in a relationship.

The absence of any discussion of Dedekind's methodology, which is easily duplicatable for extension into mathematics, is a startling omission. The fact that neither Ziegler nor Aigner make no mention of a comparison of Euclid's methodology to that of Dedekind's in terms of infinity is peculiar, since the focus of the first chapter is on infinity. It is also peculiar, since Dedekin's reliance upon points and a line in a plane recalls Euclid's theoretical framework. What is even more peculiar is that the relations between these sets, which are often described as lesser or greater, are not subjected to the transformation of a pair of compared objects in an analogy, as Dedekind's predecessor envisioned prime numbers and infinity.[509] It is thus precisely here one would think not only an exposition of these different methods would be appropriate but necessitate a detailed exposition of their nuanced intricacies for the explanation of mathematics in general.

Zhukov, Gregory () • One of the great commanders[510], Zhukov executed a Blitzkrieg on Germany towards the end of the war, traveling no less than 300 miles in a fortnight. While many in the circles of military war planners behind U.S.-led NATO's campaign for expansion of the private central banking alliance have only considered openly the revivification of Adolf Hitler's Directive 21, the inversion of Zhukov's late war campaign from east to west is one of the considerations for Moscow.

Zubatov, Serge () • In an extraordinarily obscene technique from the development of authoritarian politics leading to forerunner of the modern police State in the form of the Czarist monarchy on the eve of revolution, Serge Zubatov (i.e., Сергей Васильевич Зубатов), a Czarist police agent in the Department of Police[511] to become the first head of the Moscow Okhrana, not only introduced biometrics such as fingerprinting or photographing but experimented wildly with the Russian society his Department of Police sought to subjugate endlessly. A dedicated monarchist, born on April 7, 1864, Zubatov blew his brains out of his head on March 15, 1917 after the Czar abdicated.

Zubatov did not think that the police should merely forestall or suppress but ought to cultivate "subversion" actively throughout extraordinary intervention into the policed society. Having from invasive surveillance of the workers movement convinced himself (as did Lenin but with different conclusion) that Russian workers lacked a class consciousness, he conceived of the first police-sponsored trade-unions! Between 1901 and 1903[512], supported by significant layers of the Russian intelligentsia, the dvorianne, or bureaucrats from within the civil service, Zubatov became one of the most legendary trade-unionists in the history of the world, organizing workers into unions on the basis of "police socialism,"[513] a special type of politically neutered, apathetic, impotent type of psychologism where workers, imbued with a sense of organization, ”fought” in a way similar to the way Sisyphus rotated around a hill with rock, becoming victims of a deliberate subterfuge without any results. On August 19th, 1903, the Czar’s Minister of Interior, Vyacheslav von Plehve summoned Zubatov, accusing him of fomenting strikes and betraying secrets, sacked him, and placed a ban on his ability to live in Saint Petersburg or the Moscow Governorates, where the centers of Czarist power and the least corrupt civil servants operated to preserve the monarchy. After Plehve’s assassination on July 29th, 1904, Zubatov returned to the capital but he declined an invitation to rejoin the Czarist Police Department, which had already turned its back on Zubatov. Zubatov retired to a private life, living off a Czarist pension. During the January 9th, 1905 revolution under Father Gregory Gapon, many of the workers whom Zubatov organized in his police trade unions joined Gapon’s organizations to present a petition to the Emperor at the Winter Palace, to which the Czar responded with the massacre on Bloody Sunday.

[509] If the set of rational numbers is countable but the set of real numbers is uncountable, the relation between the two ought to be 1) such that the comparison is duplicatable or else 2) the proportion itself is capable of reproduction by a pair of compared objects. The fact that one is less or the other great has not become the subject of a comparison draws into sharp relief the centrality of method for mathematics. It is not hard for a cobbler or a mechanic to see that less important for a solution is the problem itself than the way the problem itself is viewed. A cobbler may receive shoes. The most immediate response is to turn the shoe over to the sole. A mechanic receives cars. The most important view for him or her is from the bottom up. The ability to view a problem is at times more fundamental than the actual problem itself.

[510] The Great Commanders (2003), an award winning expert portrait of six men, places Zhukov after Alexander the Great, Julius Caesar, Horatio Nelson, Napoleon Bonaparte, and Ulysses S Grant.

[511] In the development of the modern police State, Russia's Czar created a number of institutions, whose genealogy corresponds closely to the development of greater forms of authoritarianism. The most detached the police became from the Czar, the more closely authoritarianism followed.

[512] The most suspicious activity in Zubatov's career relates to the Jews. It is incomprehensible, almost unimaginable, to read that the Jews, the most oppressed layer of the Russian Czar, collaborated with Zubatov. Czarist secret police set separate conditions on the Jews, dedicating a substantial amount of manpower to their surveillance. Nonetheless, the Jews, who could not have been ignorant of the conditions, entered into collaboration with Zubatov to create the Jewish Independent Labour Party, countering the influence of leading Jewish revolutionaries in the socialist movement. The Jewish "Independent" Labour Party countered the Marxist General Jewish Labour Bund, holding the first legal Zionist Congress in 1902.

[513] Could it be that the model for "rank-and-file committees" the Federal Bureau of Investigation's illegal deployment of the Socialist Equality exploits to hoodwink workers is based on a covert form of Zubatov's overt "police socialism"?

While Zubatov’s unions became the first legally operating unions in Russian history, they were the first to be abandoned for much higher forms principled labor organizations. The 120th anniversary of the height of Zubatov’s police trade unionism coincided with the beginning of the Ukraine war.
